USB-1208FS/LS/1408FS Series

General Information

Analog Input

USB-1208LS/1208FS/1208FS-Plus/USB-1208FS-Plus-OEM: These devices provide eight, 11-bit SE analog inputs or four, 12-bit DIFF analog inputs.

USB-1408FS/1408FS-Plus/ USB-1408FS-Plus-OEM: These devices provide eight, 13-bit SE analog inputs or four, 14-bit DIFF analog inputs.

All devices support software-selectable ranges that provide inputs from ± 1 V to ± 20 V in a DIFF configuration, and ± 10 V in a SE configuration.

Sample Rate

USB-1208LS: When scanning in hardware-paced mode, the USB-1208LS can sample at a maximum of 1.2 kS/s. BURSTIO mode into the 4 kS FIFO is also available at rates up to 8 kS/s.

USB-1208FS/1208FS-Plus, USB-1408FS/1408FS-Plus, and -OEM Models: When scanning in hardware-paced mode, the USB-1208FS/1208FS-Plus can sample at a maximum of 50 kS/s, and the USB-1408FS/1408FS-Plus can sample at a maximum of 48 kS/s.

Channel-Gain Queue

The channel-gain queue feature lets you configure a list of channels and gains for each scan. Each channel can have a different gain setting. The gain settings are stored in a channel-gain queue list that is written to local memory on the device.

The USB-1208LS channel-gain queue list can contain up to eight channels in SE mode and up to four channels in DIFF mode. The channels can be listed in any order.

The USB-1208FS and USB-1408FS channel-gain queue can contain up to 16 channels listed in any order.

The USB-1208FS-Plus and USB-1408FS-Plus channel-gain queue can contain up to eight unique channels in SE mode and up to four unique channels in DIFF mode. The channels can be non-consecutive, but must be listed in increasing order.

Analog Output

The maximum analog output update rate for all devices depends on several factors, including USB port speed.

USB-1208LS: This device offers two 10-bit analog outputs with a range of 0 V to 5 V.

One analog output updates at a maximum rate of 100 S/s; two analog outputs update at a maximum rate 50 S/s each. The USB-1208LS updates in software-paced mode only.

USB-1208FS and USB-1408FS: Both devices offer two 12-bit analog outputs with a range of 0 V to 4.096 V.

When updating continuously from computer memory (hardware-paced mode), one analog output updates at a maximum rate of 10 kS/s; two analog outputs update simultaneously at a maximum rate of 5 kS/s each.

USB-1208FS-Plus, USB-1408FS-Plus, and -OEM Models: Both devices offer two 12-bit analog outputs with a range of 0 V to 5 V.

When updating continuously from computer memory (hardware-paced mode), the analog outputs update at a maximum rate of 50 kS/s per channel.

Concurrent AI/AO Scanning Operations (-Plus and -OEM Models Only)

The USB-1208FS-Plus, USB-1408FS-Plus, USB-1208FS-Plus-OEM and USB-1408FS-Plus-OEM all support executing an analog input scan and analog output scan at the same time.

Digital I/O

All devices provide 16 TTL-level digital I/O lines. Digital I/O can be programmed on each 8-bit port (Port A and Port B) for either input (default) or output.

USB-1208FS-Plus, USB-1408FS-Plus and -OEM Models: Port B0 through Port B7 are high-current drive (24 mA) digital I/O connections.

Event Counter Input

Each device supports one 32-bit TTL-level counter that accepts inputs up to 1 MHz.

-Plus-OEM Versions

The USB-1208FS-Plus-OEM and USB-1408FS-Plus-OEM have a board-only form factor with header connectors for OEM and embedded applications (no case, CD, or USB cable included). All devices can be further customized to meet customer needs.

The USB-1208FS-Plus-OEM and USB-1408FS-Plus-OEM have the same specifications as the USB-1208FS-Plus and USB-1408FS-Plus.

‡ Self-powered USB hubs and hosts have their own power supply. The USB port(s) on your computer are root port hubs. All externally powered root port hubs (desktop computers) provide up to 500 mA of current for a USB device. Battery-powered root port hubs provide 100 mA or 500 mA, depending upon the manufacturer. A laptop PC that is not connected to an external power adapter is an example of a battery-powered root port hub.

Bus-powered USB hubs and hosts do not have their own power supply.
