# GX1648

## ANALOG OUTPUT PXI CARD

- 64 individual analog outputs
- 12-bit Resolution
- Output Range: -10 V to +10 V
- Output Current :  $\pm 10$  mA per channel
- Simultaneous updating on all channels
- 3U PXI Instrument

## DESCRIPTION

The GX1648 is a 3U PXI digital to analog output board designed specifically for applications where multiple analog outputs are required. The GX1648 offers precision signal sourcing performance and quality at an economical price.

## FEATURES

The GX1648 is organized as 4 groups of 16 channels. Each group is programmed and triggered independently. All groups can also be updated simultaneously. All channels provide single-ended voltage and are automatically at zero volts DC after reset to prevent inadvertent damage to external equipment.

## PROGRAMMING AND SOFTWARE

The board is supplied with the GXAO software package that includes a virtual instrument panel, a Windows 32/64-bit DLL driver library and documentation. The virtual panel can be used to interactively program and control the instrument from a window that displays the instrument's settings and status. In addition, interface files are provided to support programming tools and languages such as ATEasy, LabView, LabView/Real-Time, C/C++, Microsoft Visual Basic®, Delphi, and Pascal. Help file and PDF User's Guide provides documentation that includes instructions for installing, using and programming the board.

A separate software package - [GtLinux](#) - provides support for Linux 32/64 operating systems.

## APPLICATIONS

- Discrete avionics testing
- Automatic Test Equipment (ATE)
- Multiple DC source
