**Notes:**

1. LF, 4TP denotes test fixtures for use with four-terminal pair type LCR meters and LF impedance analyzers in low frequency region ( ≤ 110 MHz).
2. RF, 7 mm denotes test fixtures for use with RF impedance measurement instruments which have 7 mm coaxial test port.

3. DC, high R denotes test fixtures for use with DC high resistance meter.
4. Four-terminal (Kelvin) contact test fixture suitable for measuring low impedance devices.
5. Tweezers type test fixture with 1 meter test leads.
6. Test fixture for measuring three-terminal type resonator and filter devices. Applicable SMD depends on the device's electrode configuration and dimensions.
7. Test fixture for use with the 42842C bias current test fixture. Attachable to the 42842C only.
8. Test fixture for measuring SMD and leaded components.
9. Check marks in the table denote the applicable DUT sizes.
10. Minimum SMD size is not specified. Not recommended for smaller SMD than 1608 type because contact repeatability degrades with the reduction of device size.
11. Applicable to SMD components with thickness  $\geq 0.65$  mm. Not suitable for smaller SMD than 1608 type.
