POWER SUPPLY and LAMP HOUSING for Xenon / Mercury-Xenon Lamps

Power Supply

Using Xenon / Mercury-Xenon lamps in photometric applications requires an extremely stable power supply. We recommend using Hamamatsu power supplies to obtain full performance from lamps. Hamamatsu provides two types of power supplies: dropper type and switching type. Dropper type power supplies feature extremely high stability. Switching type power supplies have less stability but offer advantages such as light weight and high cost performance. Select the type that meets your application. Hamamatsu also manufactures various types of OEM power supplies.

NOTE :

*a : Manual switching

*b : Excluding projecting parts.

*c : Dropper type power supply must be used with a starter (sold separately).

*d : Please consult our sales office about "Start Method".

These power supplies use a trigger mode in which a positive high voltage is applied to the anode. Use extreme caution concerning the insulation for the anode.

Lamp Housing

For simple and safe use of lamps, Hamamatsu provides lamp housings that give optimal performance in terms of light output stability, efficiency and life. There are three types of lamp housings: the E7536 is designed to improve handling, while the E2419 and

E2420 feature simplified configurations. The E7536 ensures excellent lamp stability and high output of collimated light by means of the built-in reflecting mirror and exit lens. A built-in interlock function, lamp starter and air cooling fan enhance operator safety.

E7536

Type No.	Suitable Lamps	Features
E7536	150W, 200W	Built-in reflecting mirror and exit lens. Built-in interlock function, lamp starter and air cooling fan.
E2419	35W to 100W	Compact and ideal for experimental setups.
E2420	150W to 250W	Compact and ideal for experimental setups.
E5421	300W to 500W	Compact and ideal for experimental setups.
