

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

CodeTEST® Embedded Software Verification Tools

CodeTEST-VME

Highlights

- VME version of the entire CodeTEST suite of software verification tools, including Software Trace, Performance Analysis, Coverage Analysis, and Memory Allocation Analysis
- Supplies the visibility critical to validating complex VME system software operation
- Traces code execution of a single CPU in detail or reveals the intricate interactions of multiple CPUs with a high-level VME System Trace
- Accelerates software test and analysis of VME applications with real-time and interactive measurements
- Optimizes VME system performance and improves product quality
- Designed specifically for software engineers

Introducing a powerful VME version of the CodeTEST software verification tool suite.

Powerful Software Test and Analysis Tools for VME Developers and Testers

CodeTEST®-VME offers a powerful suite of software analysis tools designed specifically for VME software developers and testers. CodeTEST-VME gives you a view of program operation that you've never seen before.

Today's VME applications, with multiple boards and processors interacting within a system, are becoming increasingly complex. Testing, optimizing and validating these complex systems is getting more and more difficult and time consuming. Tools specially designed to provide visibility and insight can help make the job faster and easier.

Visibility of VME Software Operation

CodeTEST gives you a variety of selectable views of code behavior. Instead of "surfing" the VME backplane hunting for specific events with a bus analyzer, you can drill down and focus on individual processor code. Or move up to a higher level of abstraction and monitor System Level Trace to see the interactions among the various subsystem CPU board activities.

With CodeTEST-VME Trace, you can review system operation by source execution and system transactions, not waveforms or ones and zeros. You see familiar readable code instead of endless bus cycles.
