ISA, PC/104, RS232, PCI Single-axis

DMC-1410, DMC-1411, DMC-1412, DMC-1417

Product Description

The DMC-1410, DMC-1411, DMC-1412, DMC-1417 are economical, single axis motion control cards with ISA, PC/104, RS/232 and PCI communications, respectively. They have many of the same high-performance features of Galil's multi-axis controllers, but are designed for just one axis. This offers the user both space and cost-savings.

With a 32-bit microcomputer, the single axis controllers provide such advanced features as PID compensation with velocity and acceleration feedforward, program memory with multitasking for simultaneously

running two application programs, and uncommitted I/O for synchronizing motion with external events. It handles various modes of motion including point-to-point positioning, jogging, contouring, electronic gearing and ECAM. Additionally, the controllers accept inputs from two encoders, which is useful for electronic gearing applications. The user can configure the controller for either stepper or servo motor control.

Like all Galil controllers, the DMC-1410, -1411, -1412 and -1417 use a simple, English-like command language which makes them very easy to program. Galil's WSDK servo design software further simplifies system set-up with "one-button" servo tuning and real-time display of position and velocity information. Communication drivers are available for DOS, Linux and all current Windows operating systems.

Hardware Accessories

ICM-1460

The ICM-1460 Interconnect Module provides screw terminals for the 37-pin D-type cable from the DMC-1410 or DMC-1412, for quick connection of system hardware. A 40-pin to 37-pin cable allows the ICM-1460 to be used with the DMC-1411. The ICM-1460 is contained

ICM-1460 Interconnect Module
(shown with and without cover)

in a metal enclosure with dimensions of 6.9" × 4.9" × 2.6" and 0.2" diameter key-holes for mounting. The ICM is normally shipped configured for high amp enable, +5 V (-HAEN). For low amp enable, order ICM-1460-LAEN.

ICM-1460-OPTO

For applications requiring optoisolated inputs and outputs, the ICM-1460 option "OPTO" provides 5–24 V and 25 mA optoisolation on all general inputs and outputs, home inputs, and limits.
