

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

LOOKING FOR MORE INFORMATION?

MD-DIO

MX-DIO

MR-DIO

96 Line I/O

Four 24-Bit Ports

- ▼ 48 or 96 Lines of Digital I/O
- ▼ Double-Height (6U) Board with Right-Angle Latching I/O Connectors
- ▼ Lines Configurable as Latched Input or as Output with Readback
Output Lines Can Sink up to 24 mA
- ▼ Hysteresis on all Input Lines
- ▼ Metastable Hardened Latches
- ▼ Address Mapping Granularity of 256 Bytes
- ▼ Up to 16 Interrupt Sources
- ▼ Programmable Priority or Polled Interrupt Modes
- ▼ Software-Controlled Input Polarity and Masks for Interrupts
- ▼ Programmable Interrupt Level and Vector
- ▼ MR-DIO Designed to Meet MIL-STD-810E Vibration and Shock Methods 514.4 and 516.4
- ▼ Industrial, Extended Temperature, and Rugged Versions Available

Up to 96 Data Lines

The DIO provides either 48 or 96 lines of TTL I/O. Each input line has a minimum of 0.4V of hysteresis to ensure accurate readings in an electrically noisy environment or whenever the signals change slowly.

Powerful Programmability

Using the Direction Control Registers (DCRs), the data lines of the DIO are configured by software to be either input or output lines. The DCR allows the direction of a single line to be specified, eliminating wasted I/O lines. All on-board control, interrupt, and data registers are directly addressable from the VMEbus, providing an efficient software interface with minimal system delays.

Intelligent Interrupting

The DIO has 16 lines which serve as interrupt sources. Each of these lines can be individually masked and configured for interrupting on high-going or low-going edges. Users can choose between priority or polling interrupt modes. The priority mode provides a vector offset with the binary address of the highest interrupt generating line. The polling mode generates a generic vector, allowing the user to read a secondary register to determine the causes of the interrupt. With programmable interrupt-source capability, the DIO easily manages applications requiring priority servicing.

Environmental Classes

The DIO is available in three versions: industrial (MD-DIO), extended temperature (MX-DIO) and rugged/extended temperature (MR-DIO) versions. Both the MX and MR versions are designed, tested, and guaranteed to perform dependably in environments from -40°C to +85°C. The MR version also withstands extreme shock and vibration.

Software Support

Real-time operating systems are supported by MATRIX and third-party resources. Contact MATRIX for assistance with software selection.
