

## Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

### SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

### *InstraView*<sup>SM</sup> REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at [www.instraview.com](http://www.instraview.com) ↗

### WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. [www.artisanng.com/WeBuyEquipment](http://www.artisanng.com/WeBuyEquipment) ↗

**TECHNICAL INFORMATION SHEET – NUMBER 155**

818P, 818P4, 818P15 Program Event Output Setup

11/20/95

ISSUED BY THE APPLICATIONS ENGINEERING DEPARTMENT

The 818 programmers can have up to 3 program event relay outputs configured to energize or de-energize at certain segments of a program run, provided these output slots are not occupied by another feature. Refer to the catalog or 818P, 818P4, 818P15 data bulletin for coding sequence. The program event relay's may be placed in channel 2 (OP2), channel 3 (alarm slot 1), and channel 4 (alarm slot 2). A standard relay board (**SUB818/OUTPUT-BD/RLY//**) can be used.

After hardware installation, it is necessary to go into configuration, "idn" the new boards and enable the program event output(s) in the software. **Refer to the configuration section of the Operations Manual or Engineering Manual, for instructions.**

The configuration code(s) are: Channel 2 (OP2) is "C2" "D" digit=8.  
 Channel 3 (alarm 1) is "C3" "B" digit=6.  
 Channel 4 (alarm2) is "C3" "C" digit=6.

Exit configuration per instructions ("Clr" then both arrow buttons).

Additional program parameters will be added to the scroll list. In addition to having Pr1, PL1, Pd1, Pr2, PL2, Pd2, etc., there will be Or1, Od1, Or2, Od2, etc.. The Or(x) is the assignment of output on ramp (x), where (x) is 1-8. The Od(x) is the is the assignment of output on dwell (x), where (x) is 1-8.

There are eight possibilities for which the three outputs can be activated for each "Or(x)" and "Od(x)".

			All outputs disabled
2			output 2 enabled
2	3		outputs 2 and 3 enabled
	3		output 3 enabled
		4	output 4 enabled
2		4	outputs 2 and 4 enabled
	3	4	outputs 3 and 4 enabled
2	3	4	outputs 2, 3, and 4 enabled

**Example:** Simple program

<u>ramp rate</u>	<u>ramp output</u>	<u>dwel level</u>	<u>dwel output</u>	<u>dwel time</u>
10° /min.	none	1200°	2- -	.5
5° /min.	none	25°	- -4	end

**Solution:** Program parameters settings

	<u>Pr</u>	<u>Or</u>	<u>PL</u>	<u>Od</u>	<u>Pd</u>
1	10°	--	1200°	2- -	.5
2	5°	--	25°	- -4	end

"Pr1"= 10, "Or1"= no numbers, "PL1"= 1200, "Od1"= 2 only, "Pd1"=.5  
 "Pr2"=5, "Or"= no numbers, "PL2"=25, "Od"= 4 only, "Pd2"= end.
