**Description:**

**Please Note:** All IR Viewers with the letter "A" in the model number have been DISCONTINUED. To see its functionally equivalent replacement, please type 84499 in the "Search" box on the top left of this page, press "GO", then select 84499 from the list.

The FIND-R-SCOPE® 84499A is a self-contained, hand-held infrared viewer operating in the near-infrared region of the spectrum. A high-resolution image converter tube, and high voltage power supply combine with proprietary Infragon objective lens and other precision optics to permit a clear view of objects or images which can not otherwise be seen by the naked eye.

The FIND-R-SCOPE® has a wide variety of applications in many different industries. These applications are further expanded by taking advantage of the available accessories. (*See right border for most popular accessories for this unit.*) The optional close-up lens allows for viewing within 2" to align and verify fiber optic sources. The infrared filters increase the signal-to-noise ratio by blocking visible light while inspecting infrared emitting diodes, aligning laser systems and examining art and other historic or legal documents.

Other applications include low light surveillance, biological research, electrical maintenance, hot-spot detection, clinical medicine, and viewing in photographic darkrooms.
