## D7L Series Automation PCs

---

Cutler-Hammer now puts desktop functionality in an industrial PC with the D7L Series Automation PC, a Pentium III- and Windows 2000-ready powerhouse with options never before possible: Pentium II processor (350-450MHz), 100 MHz SDRAM, an optional ZIP drive, LS120 super disk, CD-ROM or DVD, mouse and keyboard ports, and expansion capabilities that enable you to configure the exact control station you need.

The D7L Series Automation PC carries on Cutler-Hammer's scalable, open platform strategy to ensure that when you configure your system today, it will work to meet the changing needs of your system tomorrow. Adding hardware and software configurations requires no tools, keeping downtime to a minimum. For the ultimate supervisory station, use the D7L as a master controller networked to your facility-wide information system, running Cutler-Hammer NetPoiNT HMI software.

D7L Series Automation PCs provide all the features required of a sophisticated IPC control station including a flat, front mounting design, 15" TFT flat-panel display, serial ports, USB port, parallel port, Ethernet and sound. All ports are located on one side of the electronics module for convenient access.
