Photometrics®

CoolSNAP^{ES} Monochrome

1392 x 1040 imaging array
6.45 x 6.45-µm pixels

The Photometrics® CoolSNAP^{ES} Monochrome camera from Roper Scientific® is a fast, high-resolution digital camera system designed for low-light scientific and industrial applications. This moderately cooled CCD camera system provides 12-bit digitization at 20 MHz. The fine pitch of the pixels, 6.45 x 6.45 microns, is ideally matched to the resolution of optical microscopes. Megapixel resolution and small pixels allow imaging of very fine detail, yet the pixels can be easily binned to improve sensitivity. New interline CCD technology provides high quantum efficiency, most notably in the near-infrared (NIR) portion of the spectrum.

Features	Benefits
20-MHz digitization	High-speed, high-sensitivity readout
1392 x 1040 imaging array 6.45 x 6.45-µm pixels	Resolves fine detail Ideally matched to optical microscope
Interline, progressive-scan CCD	Electronic shuttering eliminates camera vibration and facilitates fast triggering
Flexible binning and readout	Increases light sensitivity while increasing the frame rate
12-bit digitization	Quantifies both bright and dim signals in the same image
Thermoelectric cooling	Increases integration times for higher sensitivity
Enhanced quantum efficiency	Provides higher sensitivity than typical interline cameras (especially in the NIR)
C-mount	Easily attaches to microscopes, standard lenses, or optical equipment
Subcompact, fanless design	Low profile allows easy setup
Acquisition software	Capture, analyze, and save high-resolution images
Video output (optional)	Compatible with standard video equipment
PCI interface	Works with Windows® (98SE and later) and Mac operating systems
Enhanced PVCAM® Circular buffers Device sequencing	Compatibility with numerous third-party software packages Provides real-time focus Enables precise integration with shutters, filter wheels, etc.
