# Multifunction programmable controllers

## Power supplies

### Description, characteristics

References :  
page 42202/3

#### Description

TSX SUP modules are designed to power PLC bases and the local or remote I/O extensions from an AC supply  $\sim 110$  or 240 V 50/60 Hz (TSX SUP 40 or TSX SUP 702) or a DC supply  $\text{---} 24$  V (TSX SUP 41 or TSX SUP 61),  $\text{---} 48$  V DC (TSX SUP 42 or TSX SUP 62).

The front panel comprises :

- 1 A green OK lamp, internal voltages established and correct
- 2 An orange ON lamp, supply present
- 3 A supply connection block
- 4 An alarm relay contact to control external supplies (eg : supplies to power outputs)
- 5 Switch for power supply fault detection device (device enabling rapid detection of the absence of the supply voltage, which causes the program to stop with the context saved before the status of the inputs is modified).

#### Characteristics

Type of power supply		TSX SUP 40		TSX SUP 702	
Nominal voltage	V	$\sim 110 \dots 127$	$\sim 220 \dots 240$	$\sim 110 \dots 127$	$\sim 220 \dots 240$
Limit values	V	$\sim 90 \dots 140$	$\sim 180 \dots 264$	$\sim 90 \dots 140$	$\sim 180 \dots 264$
Frequency limits	Hz	47...63	47...63	47...63	47...63
Immunity to microbreaks (1)	duration	ms	10	10	10
	repetition	Hz	1	1	1
Total harmonic distortion		10 %	10 %	10 %	10 %
Maximum apparent power (2)	VA	105		180 (250)	
Power consumption (2)	W	66		100 (130)	
Inrush current at power-up (3)	value	A	100	100	
	duration	ms	10	10	
Useful power (2)	W	–		65 (85)	
Max current at $\text{---} 5$ V output (2) (4)	A	1.5		9 (11)	
Max current at $\text{---} + 12$ V output (2) (4) (12 VL and 12 VP) (5)	A	3.3		5 (6)	
Max current at $\text{---} - 12$ V output (4)	A	–		0.1	
Primary/secondary isolation voltage		1500 V rms 50/60 Hz		1500 V rms 50/60 Hz	
Cooling		By natural convection for TSX 47-40/67-40 PLC base, I/O extension rack By $\sim 110/240$ V fan for TSX 87-40/107-40 PLC base			

(1) Power supply fault detection switch at 'Stop' position.

(2) The value in brackets is given for a power supply mounted in a fan-cooled rack.

(3) Values given for power breaks recurring with a period of 1s, at 55 °C ambient temperature, whatever the energizing phase and voltage range  $\sim 110$  V or  $\sim 220$  V.

(4) The outputs cannot all supply their maximum current simultaneously, taking into account the permitted useful power.

(5) 12 VL = 12 V logic, 12 VP = 12 V power.

**Note :** For every application it is necessary to estimate the total consumption. To do this, see the installation manual for TSX/PMX model 40 PLCs : TSX DM PR 40E.

### Characteristics, references

#### Characteristics

Type of power supply		TSX SUP 41	TSX SUP 42	TSX SUP 61	TSX SUP 62
Nominal voltage	V	24	48	24	48
Limit values (ripple included)	V	19.5...30	38.4...60	19.2...30	38.4...60
Peak/peak ripple		< 10 % of Un (F = 100 or 150 Hz)			
Immunity to microbreaks (1)	duration	ms	10	10	10
	repetition	Hz	1	1	1
Maximum absorbed current with minimum supply and maximum load	A	3.3	1.6	4.8	2.4
Inrush current at power-up (2)	value (3)	A	25	25	25
	value (4)	A	5.5	3.6	12
Useful power	W	40	40	65	65
Maximum current at 5 V output (5)	A	1.5	1.5	7	7
Maximum current at + 12 V output (6) (12 VL et 12 VP)	A	3.3	3.3	4	4
Maximum current at - 12 V output (5)	A	-	-	0.1	0.1
Primary/secondary isolation voltage		1500 V rms 50/60 Hz			
Cooling		By natural convection for TSX 47-40/67-40 PLC base, I/O extension rack By ~ 110/240 V fan for TSX 87-40/107-40 PLC base			

(1) Power supply fault detection switch at "Stop" position.

(2) Values given for power breaks recurring with a period of 1 s, at 55 °C ambient temperature.

(3) Values for a duration of 0...0.5 ms.

(4) Values for a duration of 0.5...500 ms.

(5) The outputs cannot all supply their maximum current simultaneously, taking into account the permitted useful power.

(6) 12 VL : 12 V logic, 12 VP : 12 V power.
