# SECTION I

## GENERAL INFORMATION

### 1.1 INTRODUCTION

This manual describes the elements of operation and installation procedures of the MM6230 Dynamic Random Access Memory Modules.

### 1.2 GENERAL DESCRIPTION

#### 1.2.1 Configuration

The MM6230 is compatible with VMEbus specifications (C.1). Inherent to the module are VMEbus options D32 (32 bit data path width) and A32 (32 bit address path width). The module also generates and stores an odd parity bit for each byte written on write cycles and checks parity for each byte read on read cycles. Then if a parity error is detected, the module responds by assertion of **BERR\***. (see Figure 1.1).

The Memory Array is addressable as 8 bit bytes, 16 bit words, or 32 bit longwords. The MM6230 can be configured for 4M or 8Megabytes capacity by populating it with 1024K industry standard CMOS DRAMs, such as the TC511000-12 devices. In addition, the MM6230 Dynamic Memory Module may expanded to 16Megabytes with the addition of the MM6235 8Megabyte Expansion Memory Module (See Section 2.7). For Higher Performance applications, the MM6230 Dynamic Memory Module is equipped with a **High Speed BLOCK Mode Transfer** capability. This allows the use of Block Mode Controllers, for increased system performance.

The MM6230 is completely compatible with the MVME-133A and VME Bus Master Modules employing 68000, 68010, 68020, 68030 or N32xxx CPUs.

The MM6230 base memory module is available in several options depending on the capacity required. Table 1.1 lists the optional part numbers for ordering purposes, the total memory capacity provided by each version.

Table 1.1 Memory Capacity Options

Option .....	Capacity
MM6230D/4M .....	4.0Megabytes
MM6230D/8M .....	8.0Megabytes
MM6230D/16M .....	8.0Megabytes
(W/MM6235/8M) .....	8.0Megabytes
<b>Total</b> .....	<b>16.0Megabytes</b>

Figure 1.1 Functional Block Diagram

Revised March 1989

1-2

**1.2.2 OPERATIONAL FEATURES**

The **MM6230** memory module contains its own address register and data buffers for total compatibility with the **VMEbus**.

Module selection for the **MM6230** resides on any 64K (10000 hex) bytes boundaries (A24/A32). The module may be mapped into one of the 16M byte banks, within the 4 G bytes of physical address space of the **VMEbus** (A32). The **MM6230**'s memory array is addressable as 8 bit bytes (D08), 16 bit words (D16), or as 32 bit longwords (D32), using conventional read/write transfers, or HIGH Performance BLOCK Transfers (BLT).

The user must initialize the memory module to allow the parity generator to store ODD parity otherwise the module will assert BERR\* for any subsequent read cycle. BERR\* can be disconnected from the **VMEbus** by moving jumper E1-E2 to E2-E3 (see figure 1.2 for Jumper & Switch locations). (See Section 2.5.1 for Parity configuration).

The **MM6230** is configured to respond to various Address Modifier Codes (See Table 1.2). As shipped from the factory the **MM6230** responds to A32 (using addresses A24-A31) only. Also shipped with the **MM6230** Dynamic Memory Module is an IFL to allow either an A32 (using addresses A24-A31) or A24 (ignoring addresses A24-A31). Other combinations are available, or by reprogramming the socketed IFL U15 (PLS153) (See Table 2.3 for IFL equations).

**Table 1.2 Address Modifier Code**

Hex Code	5	4	3	2	1	0	Function
09	L	L	H	L	L	H	Extended Non-Privileged Data Access (32 Addr)
0A	L	L	H	L	H	L	Extended Non-Privileged Program Access (32 Addr)

**1.3 GENERAL SPECIFICATIONS**

Table 1.3 lists the general specifications for the **MM6230** DYNAMIC RAM Memory Module

**Table 1.3 General Specifications**

<b>Characteristics</b>	<b>Specifications</b>
Capacity	4M, 8M, 12M, or 16M,bytes
Cycle Time	250ns.
Access Time (Non-Blockmode)	190nsec Read (non-Block mode) 130nsec Write (Fast Write)
Access Time (Block Mode)	180nsec Read (Block mode) 130nsec Write (Fast Write)
Address	32 bits A32/A24/BLT/UAT VMEbus 32 bits A32/BLT/UAT VSBUS
Data In/Data Out	8/16/24/32 bits bidirectional with three-state output D08/D16/D32
Modes of Operation	Read, Write, Read/Modify/Write (RMW), Block Transfers (BLT),
Un-aligned (UAT) Address Modifiers	6 bits, jumper selectable, or user programmable IFL
Parity	EVEN, 1 bit for each byte Gener- ated on each WRITE Checked on each read
Module Selection	Memory selected on 1024K byte VMEbus and VSBUS (\$100000) boundary in any 16 Megabyte bank within a 4G byte address space.
Interface: Inputs	TTL-compatible
Outputs	48ma. Three-state, TTL-compati- ble
Operating Temperature	0 to 60 degrees C
Storage Temperature	-40 to +80 degrees C
Relative Humidity	Upto 95% without condensation
Power Requirements:	Standby                      Operate
+5V (fully-populated)	2.4A                              2.6A
With <b>MM6235</b> Expansion	2.9A                              3.1A

Table 1.4 The VMEbus Interface Definition

NMEMONIC	TYPE	SIGNAL DESCRIPTION
ACFAIL*	O.C.	AC FAILURE - Indicates that the AC input to the power supply has been interrupted or that the necessary input voltage levels requirements are not being met.
AM0-AM5	3-S	ADDRESS MODIFIER (bits 0-5) - Master provides additional information about the address bus, such as size, cycle type, and/or dbt master identification.
AS*	3-S.	ADDRESS STROBE - Indicates that a valid address is on the address bus.
A01-A31	3-S	ADDRESS bus (bits 1-31) - Specific physical memory address.
BBSY*	O.C.	BUS BUSY - Generated by the current DBT master to indicate that it is using the bus.
BCLR*	3-S.	BUS CLEAR - Generated by the bus arbitrator to request release by the current DBT master for a higher level requesting master.
BERR*	O.C	BUS ERROR - Generated by a slave to indicate that an unrecoverable error has occurred and that the bus cycle must be aborted.
BG0IN* BG3IN*	3-S.	BUS GRANT (0-3) IN - Together with BUS GRANT (0-3) OUT forms a daisy-chained bus grant. The BGxIN* signal indicates to this board that it may become the next DBT master.
BG0OUT- BG3OUT	3-S	BUS GRANT (0-3) OUT - Indicates to the next board in the daisy-chain that it may become the next master.
BR0*-BR3	O.C.	BUS REQUEST (0-3) - Indicates that a DBT master in the daisy-chain requires access to the (DBT) bus.
DS0*	3-S.	DATA STROBE 0 - Indicates that odd byte data is valid on the VME data transfer bus (D00-D07/D16-D23).
DS1*	3-S.	DATA STROBE 1 - Indicates that even byte data is valid on the VME data transfer bus (D08-D15/D24-D31).
DTACK*	O.C.	DATA TRANSFER ACKNOWLEDGE - Generated by a DBT slave. The leading (falling) edge indicates that read cycle data is valid or that data has been accepted during a write cycle.

NMEMONIC	TYPE	DESCRIPTION
D00-D32	3-S	DATA BUS (bits 0 - 31) - Bidirectional data lines that provide a data path between the DTB master and slave.
GND		GROUND
IACK*	3-S./O.C.	INTERRUPT ACKNOWLEDGE - Generated by any master processing an interrupt request.
IACKIN*	3-S.	INTERRUPT ACKNOWLEDGE IN - Together with IACKOUT* forms a daisy-chained acknowledge. The IACKIN* signal indicates to the VME board that an acknowledge cycle is in progress.
IACKOUT*	3-S.	INTERRUPT ACKNOWLEDGE OUT - Indicates to the next VME board in the daisy chain that an acknowledge cycle is in progress.
IRQ1*- IRQ7*	O.C.	INTERRUPT REQUEST (1-7) - Prioritized request for interrupt service, level 7 is the highest level, 1 is the lowest.
LWORD*	3-S.	LONG WORD - Indicates that the current data transfer is a 32 bit transfer.
SYSCLK	T.P.	SYSTEMS CLOCK - A constant 16 MHz clock that is independent of processor speed or timing.
SYSFAIL*	O.C.	SYSTEMS FAIL - Generated by any module on the VMEbus to indicate that a failure has occurred in the system.
SYSRESET*	O.C.	SYSTEM RESET - When driven low, will cause a hardware system reset.
WRITE	3-S.	WRITE - When low, indicates that the data transfer cycle in progress is a write operation. When high during an address strobe, indicates a read operation is occurring.

32	USER I/O	+5v	USER I/O

**1.4 INTERFACE TIMING**

The MM6230 memory modules are designed to accept Industry Standard 1024K x 1 DYNAMIC Random Access Memory Devices specified with an 120nsec typical access delay Time (ic. TC511000-12).

**1.4.1 VMEbus Interface Timing**

The Interface Timing Diagram (figure 1.3), illustrates the timing relationships on the Data Transfer bus, for Read and Write Cycles. Access delay time is measured from the leading edge of the Data strobes at the VMEbus. (see pg. 14 figure 1.3).

Figure 1.3 VMEbus Timing Diagram

### 1.4.2 Refresh Timing

The refresh cycle timing is illustrated by figure 1.4. Refresh cycles are repeated once every 15 $\mu$ sec. The cycle interval timing is handled by an onboard clock generator to provide a hidden refresh transparent to memory access cycles. (see pg.15 fig.1.4)

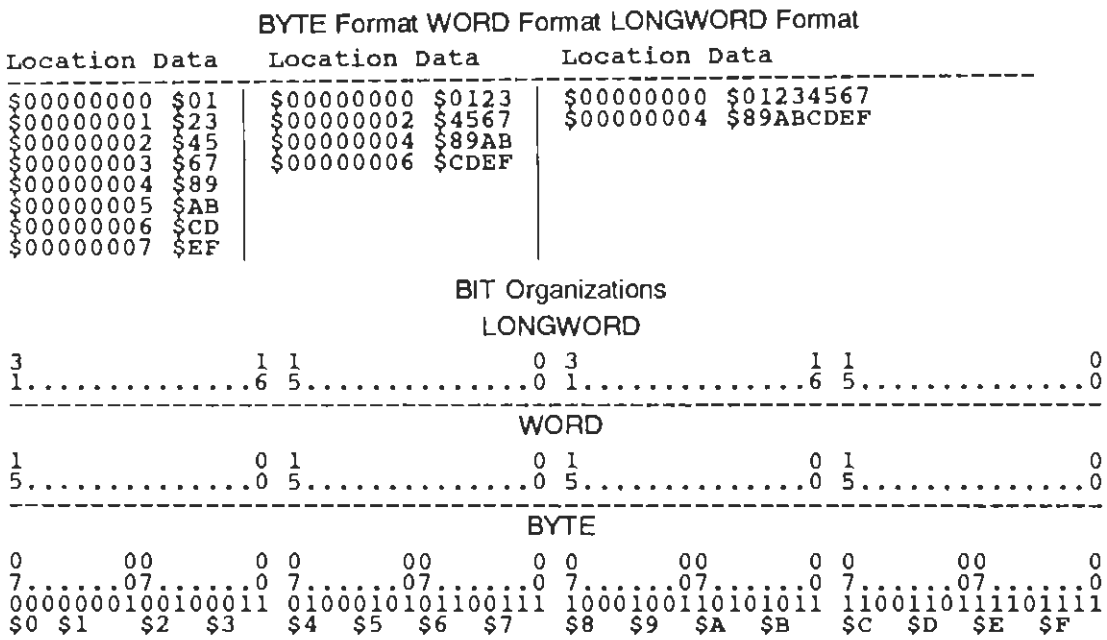

Figure 1.4 Refresh Timing Diagram

**1.5 MEMORY ARRAY ORGANIZATION**

The memory array is partitioned into four 1024K x 36 bit segments. The minimum memory configuration would be 1024K x 36 bits, including the four parity bits DRAMs in segment zero. This would translate to 4 Megabytes minimum configuration for the MM6230 Dynamic Memory Module

The MM6230 Dynamic Memory Module is partitioned as two blocks of 36 bits each (32 plus 4 parity), however the system will only see 32 bits of data during memory references, as the parity is generated and checked transparent to the user. The 32 bits of data are divided into 4 bytes (8 bits each). While the memory reads and writes may be 8, 16 or 32 bits wide, the memory is organized as 32 bit wide locations with logic controlling which byte the user is reading or writing.

If the contents of the first 8 locations in memory are \$01 \$23 \$45 \$67 \$89 \$AB \$CD \$EF, determining which bits constitute what byte may be somewhat confusing. This can be cleared up by seeing the same data in the various formats used in most systems (IE: Byte, Word, and Longword).

## SECTION II

### INSTALLATION

---

#### 2.1 INTRODUCTION

This section details the step by step procedure to interface the **MM6230** Dynamic Memory Module with the VMEbus.

#### 2.2 UNPACKING INSTRUCTIONS

Unpack module(s) from shipping carton. If carton is damaged upon receipt, request that the carrier's agent be present during unpacking and inspection of the equipment. Refer to packing list and verify that all items are present. Save packing material for storing or reshipping the equipment. For repairs or replacement of a board damaged during shipment, contact Micro Memory Inc. to obtain a Return Authorization number and further instructions.

#### 2.3 HARDWARE PREPARATION

The **MM6230** memory module should be inspected and prepared for jumper placement and switch settings prior to system installation. The following sections describe the proper jumper options and switch settings necessary for system operation. Figure 2.1 illustrates jumper and switch locations and should be referenced as necessary.

##### 2.3.1 Handling Procedure

The **MM6230** Dynamic Memory Module uses MOS components that are susceptible to damage if exposed to static electrical charges. To avoid damage of these components during handling, testing or operation, the following procedure should be used.

- Device leads should contact conductive material to avoid building of any static charge, except during testing or operation.
- Soldering iron tips, metal fixtures, tools, and handling facilities used in preparing the module for operation should be grounded.
- Devices should never be removed or inserted while power is applied to the module because voltage transients may permanently damage the devices and/or module.
- **The memory module should never be plugged in or out of the cardcage while power is applied.**
- External signals should not be applied to device inputs while power is removed.
- Any memory module removed from the system should be transferred to either non-conductive foam or an anti-static plastic bag for storage or shipment.

## **2.4 OPERATING AIRFLOW AND COOLING**

An adequate airflow is required to maintain the operating temperature within specifications of the memory module.

## **2.5 JUMPER OPTIONS**

There are several jumper options attainable on the **MM6230** Dynamic Memory Module, depending on the user application. Most of the available options are selected by installing or removing mini-jumpers on wire-wrap pins at 0.100 inch centers. See Figure 1.2 for jumper locations.

### **2.5.1 Reset Parity Error Selection.**

The Parity Error L.E.D. will light upon detection of a parity error during a read cycle of **MM6230** Dynamic Memory Module, mini-jumpers E5-E6 allow for resetting the L.E.D. during the next cycle of the module. The **MM6230** Dynamic Memory Module as shipped, E4-E5, the Parity Error L.E.D. can ONLY be reset by **SYSRESET\***.

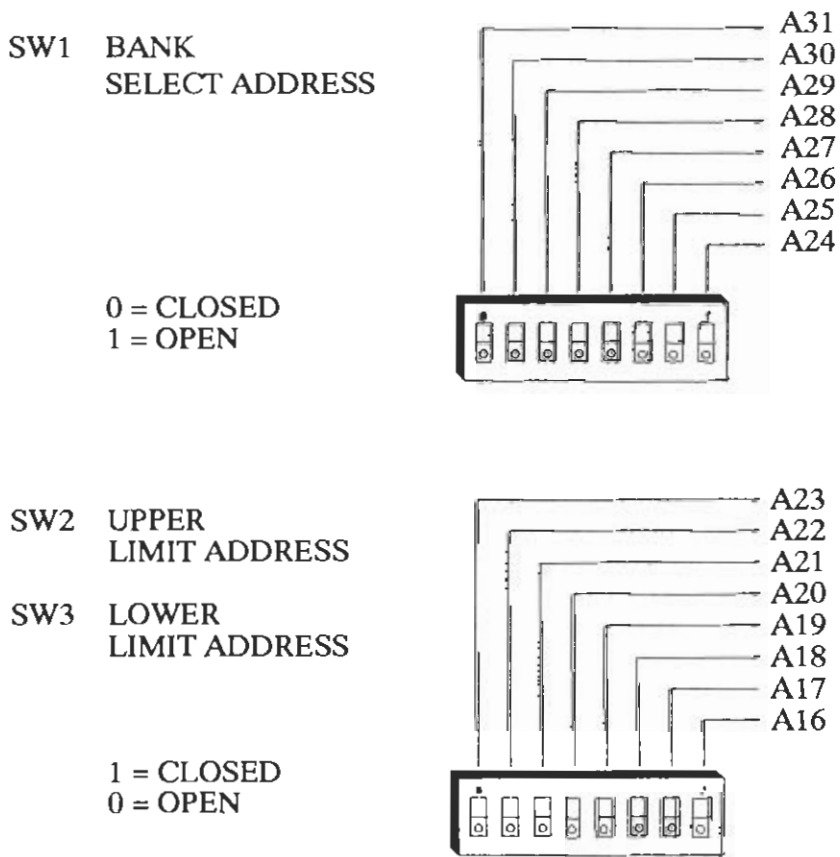

### **2.5.2 Parity Reporting Selection.**

As shipped, the **MM6230** Dynamic Memory Module will, upon detection of a **PARITY ERROR**, assert **BERR\*** instead of **DTACK\***. By moving E1-E2 to E2-E3, the **MM6230** Dynamic Memory Module will assert **DTACK\*** regardless of the Parity status.

**2.6 BANK/MODULE SELECTION CONFIGURATION**

Before the MM6230 Dynamic Memory Module memory module can become truly operational, it must be mapped into an appropriate segment within the VMEbus (4G bytes) maximum address space. This can be accomplished by setting switches SW1 (bank select) & SW2 (upper limit) & SW3 (lower limit) See example below. (Note: The polarity of the BANK, and LIMIT switches, are REVERSED).

**Table 2.1 BANK SELECTION Example**

## 2.7 Memory Expansion with the MM6235

The **MM6235** expansion memory module is a memory capacity expansion printed circuit board that is compatible and directly connectable to the **MM6230's** auxiliary connector P3. Auxiliary connector P3 attaches the **MM6235** expansion module to the **MM6230's** internal data transfer bus to provide an additional 8Megabytes of memory capacity without extending the overall height and VMEbus slot consumption of the basic **MM6230** Dynamic Memory Module.

The **MM6235** expansion memory module can be added at any future time as system demands expand.

Table 2.2 DRAM Device Locations for the MM6235 Module

## Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

### SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

### *InstraView*<sup>SM</sup> REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at [www.instraview.com](http://www.instraview.com) ↗

### WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. [www.artisanng.com/WeBuyEquipment](http://www.artisanng.com/WeBuyEquipment) ↗

### LOOKING FOR MORE INFORMATION?

Visit us on the web at [www.artisanng.com](http://www.artisanng.com) ↗ for more information on price quotations, drivers, technical specifications, manuals, and documentation
