Single-Axis, Stand-Alone Motion Controller

UNIDEX® 100 Series

- **Complete package includes controller, driver, and power supply**
- **Brushless, DC servo, and microstepping driver models**
- **Advanced motion control for master-slave, cam profile, and registration-based applications, plus output-on-the-fly**
- **Autotuning feature minimizes set-up time**
- **Multi-tasking operating system enables background PLC function or operator interface**
- **Stand-alone operation: store user programs in 32 KB nonvolatile memory**
- **RS-232 interface standard; RS-422 and IEEE-488 optional**
- **16 opto-isolated digital I/O points; 2 position latch inputs; dedicated home, limit, and analog inputs**
- **Compatible with LabVIEW® for Windows™**

Aerotech's UNIDEX 100 is a single-axis servo controller with power supply, amplifier and position controller in a single package. With features such as variables, math and multitasking, the UNIDEX 100 is ideal for your toughest factory automation projects. The UNIDEX 100 also has high-speed position latch inputs and advanced data logging capabilities, making it ideal for laboratory and test instrument applications.

Our GDS100 graphical development software is so easy to use you may never need to consult the manual. This Windows-based interface provides powerful diagnostic, development and analysis tools for generating and executing your application.

GDS100 Development Software

Total Solution

The UNIDEX 100 cuts your design time by providing matched drives, and taking care of details like tuning and cabling to assure a trouble-free installation. Units are fully tested, burned-in and ready to run right out of the box.

Practical Power

Four UNIDEX 100 models are available to drive a wide range of motors, including brushless, DC servo, and microsteppers. Brushless motors are sinusoidally commutated to minimize torque ripple.

The UNIDEX 100 uses a PIDF (feedforward) servo algorithm to determine the precise drive command profile to tightly track velocity and position trajectories with virtually zero position error. On-board autotuning makes servo tuning simple.

Variables, Math and More

With variables and math capability, one program can be used to produce a variety of parts by simply prompting the user for new application data. The UNIDEX 100 can send and receive messages from a terminal or thumbwheels so you can customize your operator interface. You can even teach the UNIDEX 100 positions with a digitizing joystick.

Application Versatility

The UNIDEX 100 has other built-in features such as axis calibration and backlash compensation, so you can maximize your machine's precision and accuracy. The "user units" feature makes it easy to customize the UNIDEX 100 to your specific machine,

UNIDEX® 100 Introduction/Specifications

whether you want to display English or metric, linear or rotary units.

The UNIDEX 100 comes standard with 16 programmable I/O, two analog I/O, and 12 dedicated I/O and limit inputs. Operator interfaces are available including a hand-held terminal, thumbwheel assembly, and LED display.

The UNIDEX 100 is equipped with dual encoder inputs, so you can tackle master-slave applications and solve transmission compliance problems with dual-loop control.

Precise registration-based moves are also possible because of the UNIDEX 100's fast 0.1 microsecond acknowledge time. The UNIDEX 100 easily handles complex functions such as output-on-the-fly and velocity profiling.

Resolution	
Stepping	User programmable from 1.8 degree to 0.007 degree (200 to 50,000 steps/revolution in 50 steps/revolution increments)
DC Servo	0.09 degree (4000 steps/revolution) standard
Brushless	0.09 degree (4000 steps/revolution) standard
Accuracy	
Stepping	±5 arc minute typical, unloaded, bidirectional, motor dependent
DC Servo and Brushless	±3 arc minute ±1/2 count typical, loaded, bidirectional, encoder dependent
Repeatability	
Stepping	±5 arc second typical, unloaded, unidirectional
DC Servo and Brushless	±1/2 count typical, loaded
Hysteresis	3 arc minute unloaded, bidirectional (stepping models only)
Position Range	±1.4 x 10^{14} counts
Velocity Range	1 Hz to 4 MHz after x4 feedback signal multiplication
Acceleration Ramp	1 ms to 8000 seconds; independent acceleration and deceleration capability
Acceleration Profile	Linear, modified parabolic
Positioning Modes	Absolute and incremental
Positioning Control	Point-to-point, velocity profiling, output-on-the-fly, registration-based moves, master-slave, dual-loop control, torque control, axis calibration, backlash compensation, free-run, digitizing teach mode, auto focus, manual feedrate override
Servo Loop	0.1 ms proportional (Kp), integral (Ki), derivative (Kd), feedforward (Kf1) servo loop; automatic Kp, Ki, Kd, Kf1, servo loop tuning; stepper encoder verification
Memory	32 KB battery-backed for user programs and variables
Modes	EDIT: Enter new programs, modify existing program FILE: Copy, delete, directory, transfer, check sum MACHINE: Run programs, immediate command execution PARAMETER: Machine and drive setup AUTOBOOT: Run program on power-up MULTITASKING: Run 2 tasks simultaneously STATUS: Position, velocity, error status
Language	Mnemonic, menu-driven from HT, personal computer or terminal
Variables	1000 integer, 200 long integer, 1000 floating point, 20 string
Math	Integer and floating point format; add, subtract, multiply, divide, square root, trig functions, absolute value
Logic	AND, OR, EXCLUSIVE OR
Comparisons	Greater than, less than, equal, not equal, equal or greater than, equal or less than
Branching	Conditional, interrupt, and program initiated IF, ELSE, WHILE, GOTO, GOSUB
Interrupt	5 microsecond acknowledge time
User Units	Permits programming in English or metric, rotary or linear units
Programmable Message	Display operator prompts, input/output data and variables via interface
Safe Zone Programming	Permits safe operating zones to be programmed through software
Data Acquisition	Store data to variables while running programs

UNIDEX® 100 Specifications

Command (9 pin D)	RS-232, (RS-422 optional) with programmable baud, parity, data bits, stop bit. Up to 30 UNIDEX 100's can be daisy-chained on one RS-232 or RS-422 line; 5 VDC output
Input/Output (37 pin D)	8 programmable inputs; 8 programmable outputs. Analog input (0 to ±10 VDC, 8 bit); analog output (0 to ±10 VDC, 8 bit); two position latch inputs (one per encoder interface, 0.1 microsec acknowledge time); interrupt (5 microsec acknowledge time); set-up; feedhold IN, shutdown IN; enable OUT; reset IN. All I/O except analog are optically isolated. Opto-isolated I/O require external 5-24 VDC, 250 mA supply.
Limits/Primary Encoder (25 pin D)	Buffered inputs for CW, CCW, home limits, marker, 5 VDC complementary line driver encoder; RS-422, 4 MHz max after quadrature; Hall-effect device; 5 VDC output; tachometer input (tach optional)
Auxiliary Encoder (9 pin D)	Inputs for 5 VDC complementary line driver encoder, 5 VDC output; RS-422, 4 MHz max after quadrature
Expansion Bus (64 pin DIN)	24-bit interface to option cards, maximum of two expansion bus option cards per system. Options include: IEEE 488 interface card; thumbwheel assembly and interface card; interface card to two OPTO 22 PB8 boards; resolver (Inductosyn)-to-digital converter card; LED display and interface card.
Motor Output (Screw Terminals)	Stepping Models: 0-160 VDC, 0-10 A, 20 kHz PWM DC Servo Models: 0-160 VDC, 20 A peak, 12 A continuous, 20 kHz PWM Brushless Models: 0-320 VDC, 20 A Peak, 12 A continuous, 20 kHz PWM
Status LEDs	+ limit, - limit, overload, remote, reset, in-position, marker, control fault, drive fault, shunt
Status Registers	Four 24-bit status registers; abort, halt, disable, fault, interrupt, and output conditions are programmable via status register bit masks
Output Short Circuit Protection	Line-to-line, line-to-ground
Current Limiting	Software selectable peak and rms output current limits; AC inrush
Fusing	AC input, motor output
Shunt Regulator	Protects power supply against regenerative energy in high-current models
U100 Chassis Weight	6.4 kg (14 lb) with transformer; 2.7 kg (6 lb) without transformer
U100i Chassis Weight	1.7 kg (3.7 lb)
Ambient Temperature	
Operating	0 to 50°C (32 to 122°F)
Storage	-20 to 70°C (-4 to 158°F)
Humidity	0 to 95%, non-condensing
AC Power (screw terminals)	115 VAC (nom) single-phase, 60 Hz, 1000 VA (max) Optional 230 VAC single-phase, 50/60 Hz, or 100 VAC single-phase, 50/60 Hz

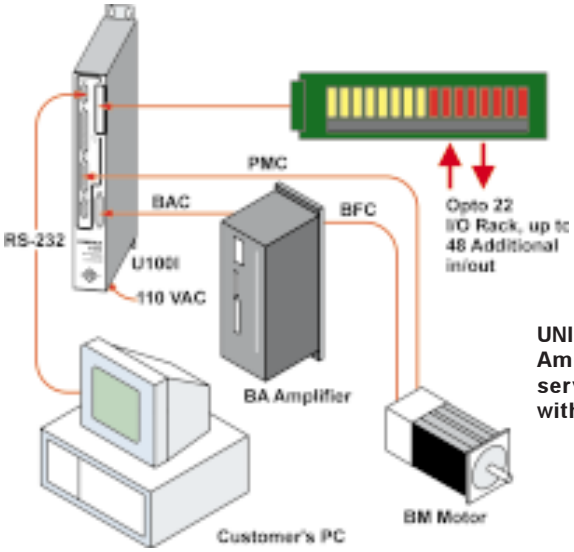
UNIDEX® 100I Motion Controller

- **Full-featured UNIDEX 100 motion controller for use with external amplifiers**
- **Integral logic power supply for direct 110-230 VAC input operation**
- **Autotuning feature minimizes set-up time**
- **Stand-alone operation: can interface to any standard analog AC or DC servo amplifier**
- **Slim panel-mount packaging with expansion capability**

The UNIDEX 100I motion controller utilizes the same powerful motion processor as the UNIDEX 100, and is packaged as a stand-alone controller for use with any AC or DC servo amplifier.

With the UNIDEX 100I you have the added flexibility of controlling any standard servo amplifier such as Aerotech's BA series. This extends the power capability of the UNIDEX 100 system to up to 100 A peak when used with Aerotech's BA100 series amplifier.

The U100I contains all required logic level power supplies and accepts 110/220 VAC directly.



UNIDEX 100I and BA Amplifier high-powered servo system configuration with expanded I/O.

AEROTECH ADVANTAGES

The U100I controller can be teamed with any BA series amplifier and Aerotech motor for a high-powered (100 A) servo solution.

	BM4500E	31.5 (4,460)	94.4 (13,400)	2,,00	6,790	0.0033 (464.7×10^{-3})	29.9 (66.0)	320	BA100	BAC2-3, PMC2-15, BFC-15

Notes: 1. Bus voltages of 40, 80 VDC include internal transformer with U100; 160 VDC bus includes transformer for 230 VAC input systems with U100.

2. F_n = cont. stall current.

UNIDEX® 100 Command Structure

Commands are English or mnemonic statements of ASCII characters of the form <command> (arg1,arg2) <delimiter>. Arguments (arg1, etc.) are integers or long, floating point, or string variables. The delimiter is a space or carriage return. "Op" is a math or logical operation.

General Motion Commands

A(arg1)	Acceleration/deceleration ramp time in user units/sec^2
ABSL	Absolute positioning mode
D(arg1)	Distance in user units
DD(arg1)	Move command for slew and straight ratio slaved motion; arg1 is velocity in user units/sec
DW(arg1)	Dwell time in sec; resolution is 1 msec
GO	Begin move
HM	Go home
INCR	Incremental positioning mode
T(arg1)	Acceleration time in sec
V(arg1)	Velocity in user units/sec

Program Control Commands

BEGIN	Program begin
DEFarg1	Definition file where arg1 is a constant
DI	Disable interrupt
EI	Enable interrupt
ELSE	Else
ELSEIF	Else if
END	Program end
ENDIF	End if
ENDMAC	End of macro
ENDSUB	End subroutine
ENDWHL	End of while loop
EXIT	End program before subroutine
GOSUB:arg1	Goto subroutine arg1 where arg1 is a constant
GOTO:arg1	Goto label arg1 where arg1 is a constant
IF (arg1) op (arg2)	If/then
LB:arg1	Label where arg1 is a constant
MACarg1	Macro file where arg1 is a constant
RI	Reset interrupt latch
SRQ(arg1)	Send service request code arg1
SUB:arg1	Subroutine where arg1 is a constant
SYNC	Synchronize tasks for FV, LV variable manipulation
TITLE	Program title comment line
WHL(arg1) op (arg2)	While

Math and Logical Operators

+	Add
-	Subtract
*	Multiply
/	Divide
=	Assigns value from the right of the "=" to variable to the left of "="
ABS(arg1)	Absolute value of arg1
AND	Logical and
CBI(arg1)	Convert arg1 BCD to integer
CIB(arg1)	Convert arg1 integer or floating point to BCD
COS(arg1)	Cosine arg1 in radians
DEC(arg1)	Decrement arg1
EQ	Test for equality
GE	Greater than or equal to
GT	Greater than
INC(arg1)	Increment arg1
LE	Less than or equal to
LT	Less than
NE	Not equal
OR	Logical or
SIN(arg1)	Sine arg1 in radians
SQRT(arg1)	Square root arg1
TAN(arg1)	Tangent arg1 in radians
XOR	Exclusive or

Communication Commands

CLN(arg1)	Clear screen from cursor to column arg1 where arg1 is a constant or variable
CLS	Clear screen
CUR(arg1,arg2)	Move cursor to row arg1, column arg2
GC	Get ASCII value of character
GM(arg1)	Get message ending at column arg1 in current row
PM(arg1)	Print message arg1 where arg1 is a variable or a quote
PM(arg1,arg2)	Print message arg1 where arg1 is variable or a quote; arg2 is a quote

UT100 Utility Software

UT100 utility software is provided free with each UNIDEX 100. This software simplifies communication with the host. It has a simple DOS executable program that allows you to create, edit, download, and run UNIDEX 100 parts programs from your PC. You can also execute immediate commands, change parameters, or view position, velocity, and system status.

The UT100 utility software also includes a Windows-based program that will plot your tuning results. You can autotune the system based on your load and speed requirements, or manually adjust gain parameters, then plot the results. If a PC host will be a permanent part of your system, our C and BASIC source code procedures will reduce your programming time. Aerotech has written routines that you can embed in your host program for both RS-232 and IEEE-488 .

UNIDEX® 100 Application Examples

Basic Move

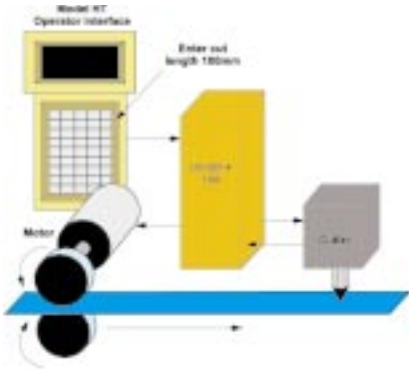
Point-to-point moves are easy to program with the UNIDEX 100. A move distance and velocity can be entered in user units such as inches, mm, or degrees. Acceleration time and profile can also be programmed, or you can use default values.

```
BEGIN
D(5)        ;move distance is 5 inches
V(10)       ;velocity is 10 inches/second
GO          ;begin move
END         ;end of program
```

Cut-to-Length Application

The UNIDEX 100 has a user-friendly operator interface. Option HT is a hand-held terminal with a 4 x 20 character display and keypad. You can prompt the operator for data such as cut length and number of cuts. It is easy to customize the display.

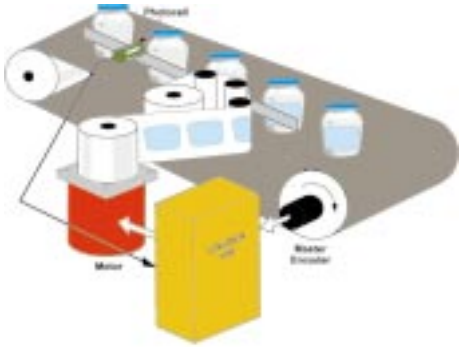
The UNIDEX 100 advances the material, starts the cutter, then waits for the cutter to finish before advancing again.



Labeling Application

Accurate label placement requires a motion controller that can respond to changes in line speed and initiate motion quickly. Typically, product travels to the label machine on a conveyor, but the conveyor can speed up, slow down, or even stop. All the while, the labeling mechanism must maintain synchronous with the product conveyor.

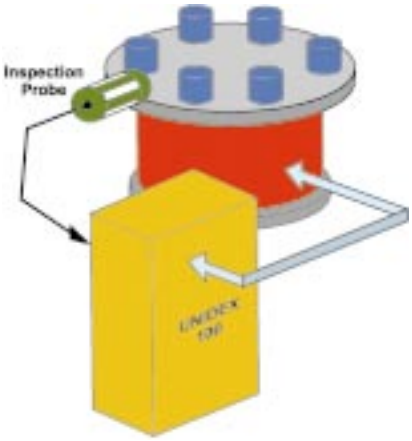
The UNIDEX 100 can synchronize the label motor speed to the conveyor like an electronic gearbox based on the master encoder. Motion is initiated a preset distance after each photo cell input to accurately place the label.



Rotary Inspection Device

Inspection applications often require defect locations to be data logged. The UNIDEX 100 has built-in position capture logic to grab encoder positions on-the-fly.

The multitasking operating system permits one task to run the motion while another task stores the defect locations to variables. The system host can later retrieve the defect locations over RS-232 or IEEE-488 interfaces.



Gluing Application

Adding an output-on-the-fly to the previous basic move example application can put down a uniform bead of glue while moving. Using output bit #1 (least significant bit of register 2), turn the glue gun on and off. This program will lay down a three-inch-long bead at constant velocity.

```
BEGIN
REG:2=0     ;reset output bit #1
D(1)        ;move 1 inch before turning
            ;on glue
V(2)        ;velocity is 2 inches/second
GO
REG:2=1     ;set bit #1 hi to turn on glue
D(3)        ;move 3 inches with glue on
GO
REG:2=0     ;reset bit #1 to turn off glue
```

UNIDEX® 100 Accessories

Model HT Programming Terminal

- Lightweight, compact hand-held terminal with cable
- 4 x 20 character, easy-to-read display
- Powered from UNIDEX 100

The convenient HT programming terminal plugs into the COM port of the UNIDEX 100 to permit local program selection and execution, plus editing.

Operations are menu assisted, minimizing errors and programming time. You can program position to be displayed on the HT, or prompt the user to enter data allowing the HT to serve as an operator interface.

SEE THE ACCESSORIES SECTION FOR DETAILED SPECIFICATIONS

Model JOY Joystick

The JOY joystick lets the user manually slew an axis with proportional speed control. Additionally, program points can be digitized in the U100 teach mode by pressing the joystick fire button. The joystick is provided with 1.5 m (5 ft) flying leads for connection to the I/O port or option TS terminal strip. Power is from the UNIDEX 100.

Model THM Thumbwheel Assembly

The THM is a six-digit plus sign thumbwheel assembly with 3 m (10 ft) cable. THM includes an interface card which plugs into the U100 expansion bus.

With the THM option, users can enter data such as distance, speed, or number of cycles into parts program variables. Power is provided by the U100. THM is housed in a 159 W x 95 H x 57 mm D (6.25" W x 3.75" H x 2.25" D) box, which can be panel mounted.

Model DISP Display

DISP is a six-digit plus sign LED display with 3 m (10 ft) cable and interface card. Users can display position, velocity, cycle number or any other parts program variable.

DISP includes an interface card which plugs into the expansion bus. DISP is housed in a 159 W x 95 H x 57 mm D (6.25" W x 3.75" H x 2.25" D) box and can be removed for panel mounting. Power is from the U100.

Model IE488 Interface

Option IE488 adds the IEEE-488 (GPIB) interface to the UNIDEX 100. IE488 functions as both a listener and talker, so interactive control and uploading of status, data, and program information to a host is possible.

The option IE488 board plugs into the UNIDEX 100 expansion bus and mounts to the indexer board. Power is provided by the UNIDEX 100.

Model INT I/O Interface

Option INT is an interface to two Opto 22™ PB8, PB16, or PB 24 boards. Each INT provides 48 additional I/O points, which can be scanned by the U100 in a background task or served in the parts program.

I/O points can be configured as inputs (with interrupt capability) or outputs. Each INT includes an interface card which plugs into the U100 expansion bus and a 1 m (3 ft) cable. Power is provided by the UNIDEX 100. PB8, PB16, and PB24 boards and I/O modules are sold separately.

Model TB-DB25-P Terminal Strip

The TB-DB25-P terminal strip provides an easy way to connect to the I/O port with a standard DB25 25-pin style connector. A TB-DB37-P is also available for the U100's I/O connector. TB includes mounting hardware and a 1 m (3 ft) cable.

UNIDEX® 100 Accessories

GDS100 Graphical Development Software

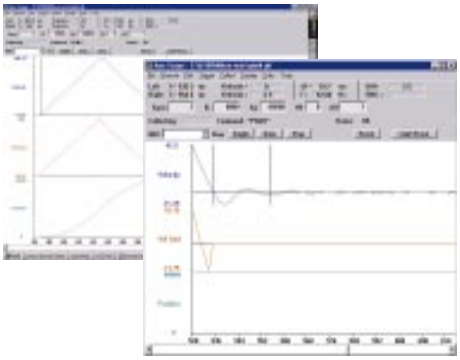
- For personal computers with Windows 3.x, 95, 98, NT
- Simplifies U100 programming and reduces setup and debug time
- Create and run programs; view results
- Includes PC-to-U100 RS-232 cable

GDS100 is a menu-driven development system for the Windows environment. It simplifies U100 programming and reduces debug time. Users can create, download, and run programs and view results.

Powerful tuning and plotting functions quickly analyze machine dynamics for optimum performance.

Parts program development is simplified by choosing from a command list with fill-in dialog boxes. Parameters, registers, and variables are displayed with descriptions and min/max values. Default parameter files are provided for all Aerotech motors.

Users can jog, home, stop axes and display position, status, and I/O in friendly formats.



Powerful plotting utilities can generate moves to analyze settling.

Edit and debug U100 programs quickly and easily using GDS100 software.

LabVIEW® for Windows

National Instrument's LabVIEW for Windows is a software development system for data acquisition and instrument control. Aerotech has written UNIDEX 100 software drivers for LabVIEW for both RS-232 and IEEE-488 interfaces.

Running LabVIEW reduces programming time and allows a user to configure their personal computer as a "Virtual Instrument" with graphical user interfaces.

Users can select motion parameters using pictorial controls on a function panel without typing and editing program code. Functions can be executed immediately or placed in programs.

Resolver to Digital Converter

Option RD enables the U100 to control axes where a resolver or Inductosyn® is the position feedback transducer.

For example, with RD the U100 can accept resolver feedback from third party brushless motors for commutation and positioning.

MEM Memory Option

The MEM memory option adds 57 KB of battery-backed memory to the U100. This additional memory can be used to store programs, data, or cam tables. For example, with the MEM option long programs can be created that incorporate extensive operator interface menus.

The MEM option plugs into the expansion bus and mounts to the indexer board. Power is from the U100.

UNIDEX® 100 Series Motion Controller Ordering Information

PART NUMBER AND ORDERING EXAMPLE: U100M-A-160-F5/INT

U100	M	-A	-160	-F5	INT
U100 = Sub-panel mount package	Drive Type M = Microstepping drive S = DC servo drive Z = AC brushless servo drive	Power Input A = 115 VAC, 60 Hz single phase B = 230 VAC, 50/60 Hz single phase C = 100 VAC, 50/60 Hz single phase	Bus Voltage 40 = 40 VDC 80 = 80 VDC 160 = 160 VDC	Output Drive Fusing	Options INT = Interface card to one Opto-22 PB8 I/O rack with 3 ft. cable

PART NUMBER AND ORDERING EXAMPLE: U100I-A

U100	I	-A
UNIDEX 100 series position controller	Stand-alone indexer	Line cord option A = 100 - 115 VAC input plug (USA) B = 230 VAC input plug (Europe)

UNIDEX 100 Series – Single Axis

U100M	Sub-panel mount package with microstepping drive
U100S	Sub-panel mount package with DC servo drive
U100Z	Sub-panel mount package with brushless servo drive
U100I	Sub-panel mount package indexer without servo drive. Input voltage range 100-240 VAC single phase

Power Input

-A	115 VAC, 60 Hz single phase
-B	230 VAC, 50/60 Hz single phase
-C	100 VAC, 50/60 Hz single phase

This option designates the type of line cord ONLY. U100i is the same unit.

Bus Voltage

-40	40 VDC bus for U100 (no external transformer required)
-80	80 VDC bus for U100 (no external transformer required)
-160	160 VDC bus for U100 (with 115 VAC input)
-160	160 VDC bus for U100 (with 230 VAC input)

Output Current

-F1-F5	1-5 Amps continuous current (no shunt regulator)
-F6-F10	6-10 Amps continuous current with shunt regulator. Example: U100S-A-160-F5/RS422/INT

Options

IE488	IEEE-488 interface card
RS422	RS-422 Interface (replaces RS-232)
THM	6-digit plus sign thumbwheel assembly with 3 m (10 ft.) cable and interface card
INT	Interface card to one Opto22 PB8, includes 1m (3 ft.) cable
RD	Resolver/Inductosyn to digital converter card
DISP	6-digit plus sign LED display with 3 m (10 ft.) cable and interface card
FLASH	684 KB nonvolatile FLASH ROM memory (requires MEM accessory for software development).
INTEGRATION	Setup and tune U100 system with motor and set parameters for customer specific motor. Provide parameter spec sheet.

Accessories

MEM	57 KB battery-backed memory card
HT	Hand-held terminal
GDS100	Graphical development software with RS-232 PC cable

UNIDEX® 100 Series Motion Controller Ordering Information

UNIDEX 100 Series – Single Axis (continued)

JOY	Joystick with 1.5 m (5 ft) cable
TB-DB25-P	25 conductor, DIN mount, screw terminal interface with 25-pin D-shell male, 1 m cable
TB-DB37-P	37 conductor, DIN mount, screw terminal interface with 37-pin D-shell male, 1 m cable
PB8	8 point I/O module mounting board
PB16	16 point I/O module mounting board
OAC5A	AC output module, 24 to 280 VAC, 2 A
IAC5	AC input module, 90 to 140 VAC
ODC5	DC output module, 5 to 60 VDC, 2 A
IDC5	DC input module, 10 to 32 VDC
IDC5B	DC input module, 4 to 16 VDC
AF5	EMI filter module, in-line enclosure for DC servo models with 1-5 A continuous current
AF6	EMI filter module, in-line enclosure for DC servo models with 6-10 A cont. current

Cables

BAC2-3	Cable, U100I to BA amplifier control, 3 ft.
SMC-15	Stepper Motor to controller cable, 4.6 m (15 ft) for connection to stepper motors with B2, B3 endcovers (Vero bulkhead)
HPC-15	Stepper Motor to controller cable, 4.6 m (15 ft) for connection to stepper motors with B4 endcovers (MS3102A-24 conn)
DCC-15	DC Motor to controller cable, 4.6 m (15 ft) for connection to 1-5 A continuous servo motors with MSO1 endcovers (MS3102A-24 conn) 1017,1035,1050,1075,1135
DCH-15	DC motor to controller cable, 4.6 m (15 ft) for 6-10 A continuous servomotors with MSO1 endcovers (MS3102A-24 conn) 1210, 1410, 1580, 1960
BMP2-15	Brushless Motor to controller cable, 5 m (15 ft) for connection to BM75, BM130, BM200, BM250 motors.
BMP2HPD-15	Brushless Motor to controller cable, 5 m (15 ft) for connection to BMS60, BMS100 motors.
BMP4-15	Brushless Motor to controller cable, 5 m (15 ft) for connection to BM500, BM800, BM1400, motors.
BFC-15	Motor to controller encoder and limits cable, 5 m (15 ft) for use for all brushless motors.
DDP	Motor and limits cable, 4.6 m (15 ft) for ADR series stages
DDE	Encoder cable, 4.6 m (15 ft) for ADR stages (not required for external multipliers)
DDN	Inductosyn cable, 4.6 m (15 ft) for ADR series stages
I488-3M	IEEE488 cable, 3 m (10 ft)
CBL232	PC to Unidex 100 RS232 cable, 3 m (10 ft)
BADC-MSO1-15	Cable, U100 (or BAI) to DC Motor, 4.6 m (15 ft) (DC Motor must have MS0x connector option)

Miscellaneous

W100	MOTOR option which makes motor integral cable wiring compatible with UNIDEX 100
COV	Protective cover and strain relief for AC and motor connectors
MCKU100	Mating connector kit, All 5 D-shell connector on U100 and U100I
