# Agilent 8153A Lightwave Multimeter

## Technical Specifications

The Agilent 8153A is produced to the ISO 9001 international quality system standard as part of Agilent's commitment to continually increasing customer satisfaction through improved quality control.

Specifications describe the instrument's warranted performance. Supplementary performance characteristics describe the instrument's non-warranted typical performance.

**Agilent Technologies**

Innovating the HP Way

## Mainframe Agilent 8153A Specifications

Dual channel display. For each channel, there is a main display with six digits and an auxiliary display with eight characters.

| <b>Recalibration period</b>   | 2 years   |   |   |   |
| <b>Warm-up time</b>   | 20 minutes  |   |   |   |
| The display may vary by a count of $\pm 1$ .  |   |   |   |   |

<sup>[1]</sup> At the following reference conditions:

- Power level 10  $\mu\text{W}$  (–20 dBm), continuous wave (CW).
- Fiber 50  $\mu\text{m}$  graded-index, NA=0.2.
- Ambient temperature 23 °C  $\pm$  5 k.
- Connector Diamond HMS-10/Agilent.
- On day of calibration (add 0.3% for aging over one year, add 0.6% over two years).
- Spectral width of source  $<$  10 nm.

<sup>[2]</sup> At the following operating conditions:

- Fiber  $\leq$  50  $\mu\text{m}$ , NA  $\leq$  0.2.
- For NA  $>$  0.2, add 1%.
- Ambient temperature 0 °C to 55 °C, non-condensing.
- Within one year after calibration, add 0.3% for second year.
- Add  $\pm$  1% for Biconic connector.

### Supplementary Performance Characteristics

- Add 1% to total uncertainty for full wavelength range.
- Outside the specified wavelength range, the noise will increase by up to five times the values shown above.

#### Analog output:

**Bandwidth:**  $\geq$  DC,  $\leq$  300 to 4000 Hz, depending on range and sensor module.

**Output voltage:** 0–2 V into open.

**Output impedance:**

600  $\Omega$  typical.

**Max. input voltage:**  $\pm$  10 V.

| <b>Operating temperature</b>  | 0 °C to +40 °C  |  |  |   | 0 °C to 35 °C [4]  |
| <b>Dimensions</b>   | 37.5 mm diameter, 140 mm L (1.5" x 5.5")  |  |  |   |  |
| <b>Weight</b>   | net 0.45 kg (1.0 lbs), shipping 1 kg (2.2 lbs)  |  |  |   |  |
| <b>Recalibration period</b>   | 2 years   |  |  |   |  |
| <b>Warm-up time</b>   | 20 minutes  |  |  |   |  |
| The display may vary by a count of $\pm$ 1.   |   |  |  |   |  |

<sup>[1]</sup> At the following reference conditions:

- Power level 10  $\mu$ W (–20 dBm), continuous wave (CW).
- Parallel beam, 3 mm spot diameter on detector.
- Ambient temperature 23 °C  $\pm$  5 k.
- On day of calibration (add 0.3% for aging over one year, add 0.6% over two years).
- Spectral width of source < 10 nm.

<sup>[2]</sup> At the following operating conditions:

- Parallel beam, 3 mm spot diameter on detector or connectorized fiber with NA  $\leq$  0.2.
- Ambient temperature 0 °C to +40 °C, non-condensing.
- Within one year after calibration, add 0.3% for second year.

<sup>[3]</sup> Add  $\pm$  0.008 dB/10mW between 10 and 27 dBm.

Lens required (e.g. for SM 81010BL, for MM 81050BL) or parallel beam, 3mm spot diameter on detector.

Wavelength range 950–1650nm

<sup>[4]</sup> 30 °C for > 20 dBm input power.

<sup>[5]</sup> For single-mode fiber with NA  $\leq$  0.1, straight fiber end, 1250–1570 nm.

## Supplementary Performance Characteristics

- Add 1% to total uncertainty for full wavelength range. (Except 81525A see footnote 3).
- Outside the specified wavelength range, the noise will increase by up to five times the value shown.
- For fiber applications with an NA between 0.2 and 0.3, use specific lenses and add 0.5% uncertainty for the 850  $\pm$  50 nm, 1300  $\pm$  50 nm, and 1550  $\pm$  50 nm ranges.

## Source Module Specifications

Specifications apply to the end of a 2 m long fiber cable (as specified under fiber type) with Diamond HMS-10 connectors attached. All specifications are valid for an attenuation setting of 0.0 dB.

<sup>[1]</sup> Central wavelength is shown on the display.

<sup>[2]</sup> rms: root mean square, FWHM: Full Width Half Maximum.

<sup>[3]</sup> Class 3A according to IEC 825-1 (1993), Class 1 according to FDA CFR 21 (1986).

<sup>[4]</sup> Class 1 according to IEC 825-1 (1993) and FDR CFR 21 (1986).

<sup>[5]</sup> After a warm-up time of 60 min. with output enabled. If previously stored at the same temperature, 20 min. only.

### Analog output:

**Bandwidth:** ≥ DC, ≤ 300 to 1000 Hz, depending on range and optical head.

**Output voltage:** 0–2 V into open.

**Output impedance:**  
600 Ω typical.

**Max. input voltage:** ± 10 V.

### Internal digital modulation mode:

270 Hz, 1 kHz, selectable. All output signals are pulse-shaped. Duty cycle 50%.

### Output attenuation:

The output power of all source modules can be attenuated from 0 dB to 6 dB (4 dB for Agilent 81551MM) in steps of 0.1 dB.

### Stability:

The value for the long term CW stability will increase by a factor of two with just one minute of warm-up time (laser enabled).
