M224 16 Bit Isolated Digital Output M Module

The M224 (formerly Agilent E2291A) provides 16 isolated open-collector digital outputs in four groups of four. Each group of four requires its own external +5V supply. If isolation is not required, a single supply may be used. The module also has the ability to generate an interrupt based upon a programmable delay from the output command; thereby accounting for relay settling time.
