Product Description:

Agilent Technologies Inc. 54123A 34GHz four Channel test set

The Agilent Technologies Inc. 54123A oscilloscope is a graph-displaying device – it draws a graph of an electrical signal. In most applications, the graph shows how signals change over time: the vertical (Y) axis represents voltage and the horizontal (X) axis represents time. The intensity or brightness of the display is sometimes called the Z axis.

The Agilent Technologies Inc. 54123A oscilloscope's simple graph can tell you many things about a signal, such as: the time and voltage values of a signal, the frequency of an oscillating signal, the "moving parts" of a circuit represented by the signal, the frequency with which a particular portion of the signal is occurring relative to, other portions, whether or not a malfunctioning component is distorting the signal, how much of a signal is direct current (DC) or alternating current (AC) and how much of the signal is noise and whether the noise is changing with time.

Performance Characteristics of the 54123A

Form Factor	Module (proprietary interface/bus)
Bandwidth	34 GHz
Number of Channels	4 ch
Simultaneous Channels	4 ch
Min. Vertical Sensitivity	1 mV/div
Maximum Vertical Sensitivity	80 V/div
Rise time	10.3 ps
Number of Bits	12 bits
Input Impedance (alternate)	50 Ohm
Maximum Input Voltage	5 Vrms
Main time base - lowest	.01 ns/div
Main time base - highest	1 s/div
Timebase accuracy	0.1 %
Trigger Source	External,Internal
Minimum Trigger Holdoff	16 ns
Trigger Sensitivity	40 mV

Programmability/Connectivity of the 54123A

User Interface	Proprietary
