KOLLMORGEN

SERVOSTAR CD

INTRODUCTION

Kollmorgen SERVOSTAR® CD Amplifier

- **115 to 230 Volt Single Phase AC Input Power**
- **Resolver or Encoder Feedback**
- **Integrated Power Supply**
- **Fully Digital Control**

The SERVOSTAR CD amplifier is a compact, fully digital amplifier designed to simplify installation and system set-up. Three control algorithms and self-tuning (to the load) functionality allows high performance operation to be achieved quickly and easily.

Since not one control algorithm is best for all machines, SERVOSTAR CD contains Pole Placement, PI, and PDFF control algorithms. SERVOSTAR CD utilizes the PC-based **MOTIONLINK®** for Windows™ which automatically takes you through the key steps of installation and start up.

FEATURES:

Servo Control

- Advanced patented sinewave commutation technology provides smooth, precise low-speed control and high-speed performance
- Accurate torque control due to precision balanced current loops with closed loop sensors
- Velocity loop bandwidths to 400 Hz
- Self-tuning to the load
- S-curve acceleration feature for reducing acceleration "jerk" and machine wear
- Patented torque angle control enhances motor performance
- Fully digital control loops
- Compact and attractive rugged metal package for space-saving, modern appearance - metal package minimizes electrical noise

- Pole Placement, PI, and PDFF control options
- Low Pass or Notch Filters for compliant & resonance machines
- Command modes: Torque (analog or serial); Velocity (analog or serial); Position (analog, serial, stored or pulse)
- Two current ratings: 3 & 6 amp RMS/phase continuous
- 3 to 1 peak/continuous current rating

Analog Command:

- 14 Bit analog conversion
- Simple absolute & incremental thru internal profile generator

Easy Connectivity

- Built in encoder equivalent output can eliminate the need for an additional position feedback device
- RS232 or RS485 Communication
- Unique multi-drop configuration allows a PC or PLC to communicate to multiple SERVOSTAR CD amplifiers via single RS-232 connection
- SERVOSTAR CD's versatile communication capabilities make it easy to integrate machine control data directly from the factory floor to your information system
- Analog ±10V, pulse/direction, master encoder, serial port, command options

Robust Design

- Protection against miswired connection on 24 Volt I/O
- ESD rugged circuit design and fully metallic enclosure
- Self-protecting intelligent power modules
- Full protection against short circuit, overvoltage, undervoltage, heatsink overtemperature, motor overtemperature, overspeed, overcurrent, and feedback loss
- UL, cUL listed, and CE
- Flash memory

Windows Start-up Environment – MOTIONLINK®

- Advanced motion "wizard" automatically walks you through set-up
- Auto configuration function checks for correct wiring of motor and feedback
- PC "Oscilloscope" for measuring real-time motion performance

Motion Indexing

- Stores up to 4 motion profiles in memory
- Start motion through serial command or digital I/O
- Homing functions

Configurable I/O

- 3 digital inputs, 1 digital output, & 1 analog output can be configured to a variety of functions to customize the SERVOSTAR CD to individual machines

AUTO SET-UP

MOTIONLINK® for Windows takes the fear out of setting up a servo system. Designed for the novice as well as the advanced user, **MOTIONLINK** lets users quickly set-up and fine tune system performance.

The SERVOSTAR CD Auto Set-up consists of six steps to completely configure the SERVOSTAR CD and motor for your machine:

Set SERVOSTAR CD for the Power Source. MOTIONLINK will tell you if your SERVOSTAR CD was factory programmed for a line voltage. Push okay, if correct, if not, change to the appropriate voltage.

Set SERVOSTAR CD up for the Motor. If the amplifier has been programmed to operate a specific motor, MOTIONLINK will indicate the motor type. Push okay and go to the next step. If not, you can select from a listing of standard Kollmorgen motors or enter in the specific nameplate parameters from the motors you will be using.

Setup Feedback Device. Setup your feedback device (encoder or resolver). You can also select auto-config and have MOTIONLINK perform the configuration for encoder systems.

Select the Operational Mode. Set SERVOSTAR CD to run in position, electronic gearing, velocity, or current mode. Set the command to be serial, analog, or I/O.

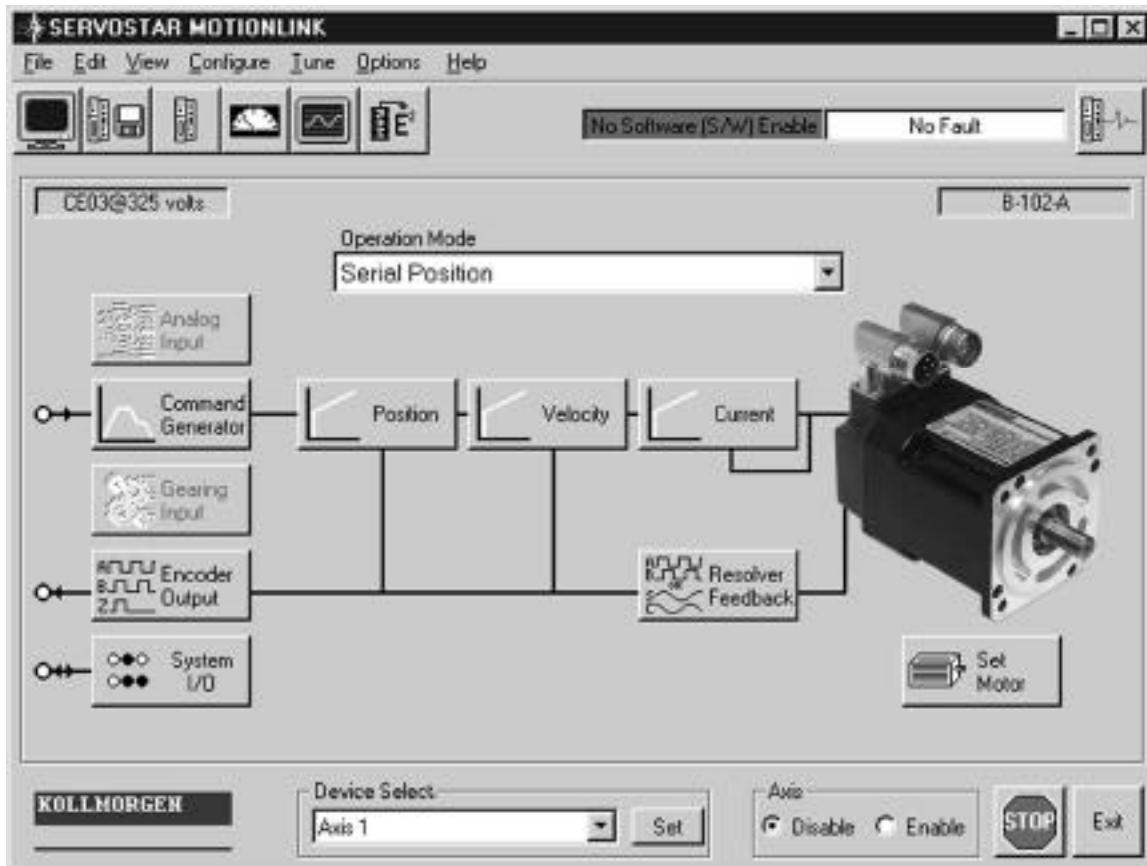

Tune SERVOSTAR CD for the Load. Simply select the bandwidth you want the system to operate and press the Auto-tune button .

Store SERVOSTAR CD Settings : The final step is storing the parameters in SERVOSTAR CD and archiving on your hard drive or disk.

Now you're ready to run your machine!

ADDITIONAL FUNCTIONS

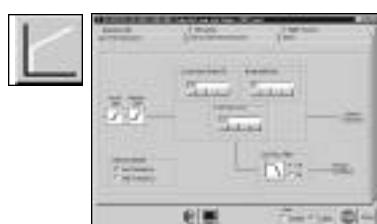

MOTIONLINK® also includes other features that allow you to fine tune or monitor the performance of the system.

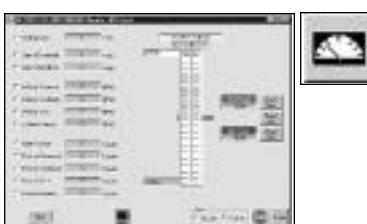

PC Oscilloscope: For closely evaluating system performance **MOTIONLINK** includes the functionality of an oscilloscope. You can very easily excite the load then review performance graphically on your computer screen.

Direct Terminal Mode: This mode turns your computer into a “dumb terminal.” Variables or parameters can be monitored and changed using the **SERVOSTAR CD**’s command language. This mode is ideal for advanced users who want to get directly in the “heart” of the **SERVOSTAR CD**.

Selectable Tuning Algorithms: No one control scheme is ideal for all applications. **SERVOSTAR CD** has three control schemes to choose from: Pole Placement (Standard), PI, and PDFF. Although the Pole Placement will meet the needs of most applications, PI and PDFF control is also available. So whether your critical need is steady speed control, high accelerations or quick response to load variations, etc., **SERVOSTAR CD** provides the greatest opportunity to achieve the best machine performance.

Monitor Mode: Allows you to jog the motor to monitor key operation variables. Speed and torque can be viewed in real time in linear gauge format. Up to three variables can be monitored at a time.

MOTIONLINK includes many other features like:

- Setting resolution of encoder “equivalent” output
- Activating position limits
- Displaying amplifier status
- Setting acceleration amps
- Limiting max speed or torque

PROGRAMMABLE FUNCTIONS

Current Control/Motor Configuration	
Description	Variables

<ul style="list-style-type: none"> • Many enabling and disabling features • Flash firmware memory for easy field installation 	K, S, STOP, REMOTE, EN, DIS

SERVOSTAR CD

AMPLIFIER SPECIFICATIONS

Electrical characteristics

- Closed loop velocity bandwidth up to 400 Hz
- Motor current ripple frequency (16-32 kHz)
- Long term speed regulation (0.01%)
- Position loop update rate 500 µs (2 kHz)
- Velocity loop update rate 250 µs (4 kHz)
- Commutation update rate 62.5 µs (16 kHz)
- Current loop update rate 62.5 µs (16 kHz)

Fault protection

- Output phase to phase short circuit protection
- Overvoltage
- Undervoltage
- Overtemperature (motor and amplifier)
- Overspeed
- Overcurrent
- Feedback loss
- Foldback
- Supply loss
- Excessive position error

Environmental

- Operation range
 - Ambient 0 to 45°C
 - Storage -20°C to 70°C
- Humidity (non-condensing) 10% to 90%

Velocity Loop Compensation

- Vel: PI, PDFF or Pole Placement selectable algorithms
- Factory preset or field tunable
- MOTIONLINK® software provides tuning programming via RS-232 or RS-485 serial interface
- Adjustable filters

Position Loop Compensation

- PID

Operational modes

- Torque control — from analog or serial command
- Velocity control — from analog or serial command
- Pulse following / Up-Down count
- Gearing from quad encoder input
- Position control

Inputs

- Analog command: ±10V
Resolver feedback models: 14 bit resolution provides up to 16,000 to 1 dynamic speed range
Encoder feedback models: 15 bit resolution provides up to 32,000 to 1 dynamic speed range
- Remote enable: 24V
- Three multi-purpose 24V inputs Configurable to: CW limit switch, CCW limit switch, gear enable, start motion, second current limit, change velocity to torque mode, home switch, search for home, move to home registration capture, active disable, control fault relay, hold position plus using two inputs, up to four stored indexes or speeds can be executed
- Pulse command: up/down, pulse/direction, pulse or quadrature encoder format into RS-485 receivers or opto isolators

Communications

- RS-232 or RS-485 serial interface 9600 or 19.2 kb
- Drive-to-Drive multidrop

Outputs

- Fault: contact closure rated for 1 Amp, 24 Volt
- One multi-purpose 24V output configurable to: speed exceeded, current exceeded, amplifier in foldback, brake enable, motion complete, in position, zero speed detect, encoder INIT complete

Diagnostics

- Seven segment LED display
- Error history log
- Internal variable monitoring
- PC scope

Motor Feedback

- Resolver: sine/cosine 2V peak to peak (SERVOSTAR CD provides 4.25V peak to peak for resolver excitation)
- Encoder: 5V differential quadrature with or without Halls, with or without marker, up to 3 MHz before quadrature (12 MHz after quadrature)

Amplifier Ratings								
Model	Output Continuous Current PerPhase (RMS/phase)	Output Peak Current Per Phase (1/2 sec)	Rated Output Continuous Power (kW)	Internal Power Dissipation (Watts)	PWM Switching Frequency (kHz)	AC Input Line Voltage (1 phase)	Rated Input Power (kW)	Regen. Option
Cx03	3	9	1.1	37	16	115-230	1.7	ERH-26
Cx06	6	18	2.2	84	8	115-230	2.8	ERH-26

RESISTIVE REGENERATION SIZING/DIMENSIONS

Resistive Regeneration Sizing

Shunt regeneration is required to dissipate energy that is pumped back into the DC bus during load deceleration. The amount of shunt regeneration required is a function of the sum of simultaneously decelerating loads. The loads need to be defined in terms of system inertia, maximum speed, and deceleration time. In addition, the duty cycle must be known. Application Note A-SU-001-H details a calculation method to determine proper regeneration sizing.

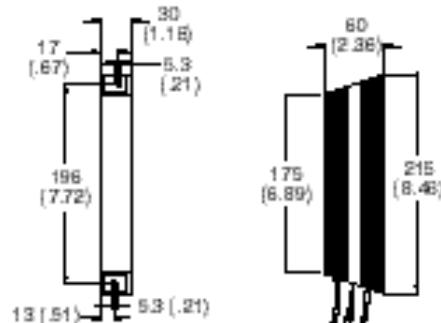

Transformer Sizing (Required only for voltage matching)

The SERVOSTAR CD can be connected to a line. Built-in soft-start circuitry protects power supply components and eliminates nuisance tripping of breakers or fuse blowing due to large in-rush currents. Transformers are only required for voltage matching purposes. In this case, the transformer should have a 115 or 230 VAC secondary depending on the operating voltage. The kVA rating of the transformer should take into account not only the servo output load requirements but also losses in the system and power factor. For single phase operated systems such as these, the transformer KVA ratings should be two times the CD amplifier output power rating.

Model	Transformer KVA rating
Cx03	2.2
Cx06	4.4

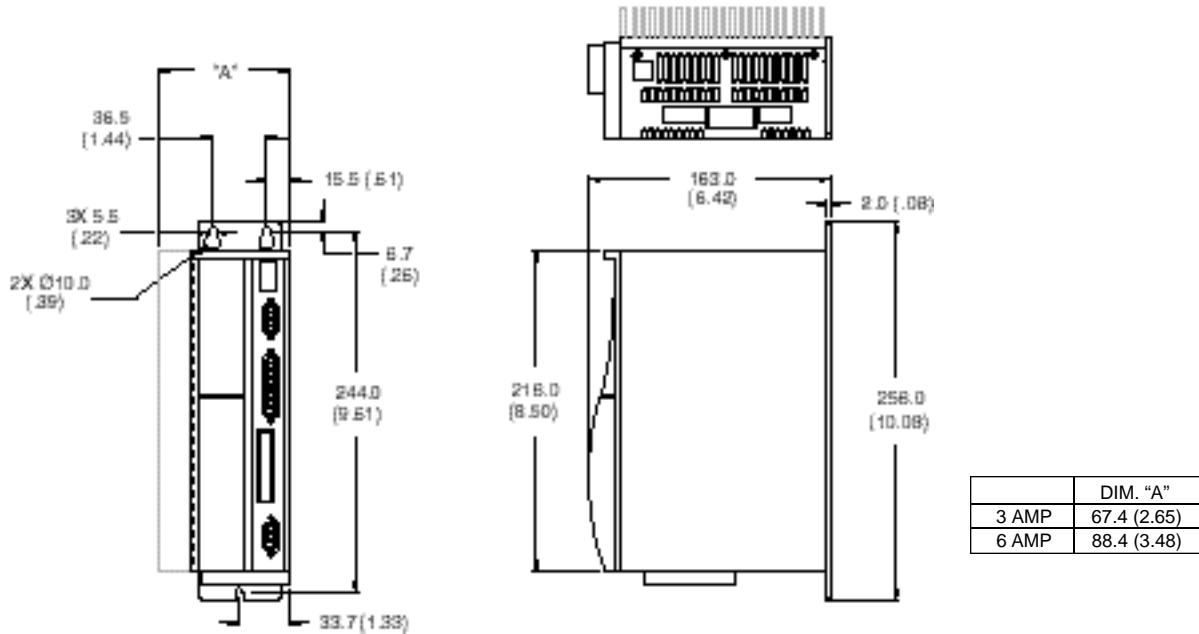

Model	Watts	Ohms
ERH-26	200	20

Resistive Regen ERH-26

Kollmorgen GOLDLINE XT

INTRODUCTION

Kollmorgen GOLDLINE® XT30 & XT150Series

- **0.44 to 4.8 N·m (0.32 to 3.5 lb·ft) Continuous Torque**
- **Up to 18.7 N·m (13.8 lb·ft) Peak Torque**
- **60mm (2.35 in) and 90mm (3.5 in) Square Frames**
- **Encoder or Resolver Feedback**
- **Speeds up to 6000 RPM**

Kollmorgen **GOLDLINE XT15** and **30** series servomotors provide high performance, cost-effective solutions in compact, rugged NEMA 23 and 34 packages.

Kollmorgen's patented magnetic design allows high torque-to-inertia for rapid acceleration, while providing extremely low cogging and torque ripple for smooth operation.

The proprietary stator assembly provides more efficient heat transfer for high torque density (compact size), and at the same time increases thermal time constants to allow longer overloads on machines.

The **GOLDLINE XT** series base models designed for use with the **SERVOSTAR® CD** drive come equipped with an integral, industrial grade optical encoder (2048 Lines Per Revolution), and rugged, CE compliant, rotatable connectors. Optional resolver feedback is also available.

FEATURES:

- Multiple stack lengths
- Short overall motor lengths
- Excellent torque-to-inertia ratio
- Low cogging/torque ripple
- Speeds to 6000 RPM standard
- Increased thermal time constant
- English and Metric standard mounting
- UL recognized, CE compliant
- Optimized windings to match **SERVOSTAR CD**
- Rotatable connectors
- Rugged 2048 LPR encoder feedback
- Built-in thermostat (XT30) or thermistor (XT15)
- IP65 sealing

OPTIONS:

- IP67 sealing
- Integral electrically-released brake (24 or 90 VDC)
- Resolver feedback
- Mating connectors

Performance Curves notes (opposite page):

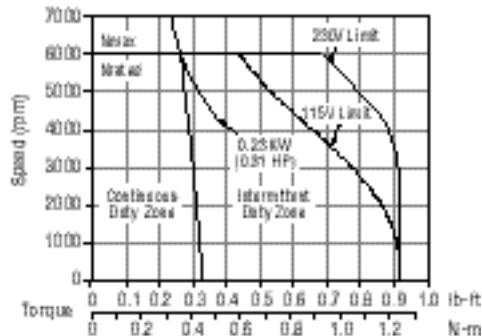

1. Continuous duty operation is with motor mounted to 8" x 12" x 3/8" aluminum faceplate.
2. All curves shown at 60Hz input. Derate max speed and peak power by 15% for 50 Hz operation.
3. For motor models with shaft seals, derate torque at all speeds by 0.026 lb·ft (0.035 N·m).
4. All curves represent typical performance. Always allow appropriate safety factor when sizing systems.

Kollmorgen GOLDLINE XT and SERVOSTAR CD

		kg-m ²	1.75
Motor Weight	Wt	lb	11.3
		kg	5.1

Notes:

1. Continuous duty operation is based on using 8"x 12"x 3/8" aluminum plate.
2. All curves shown at 60 Hz input, derate max. speed and peak power by 15% for 50 Hz operation.
3. For motor models with shaft seals, derate torque at all speeds by .059 ft-lb (.08 N-m).
4. All curves represent typical performance. Always allow appropriate safety factor when sizing systems.

Kollmorgen GOLDLINE XT

DIMENSIONS

MT150x

Notes:

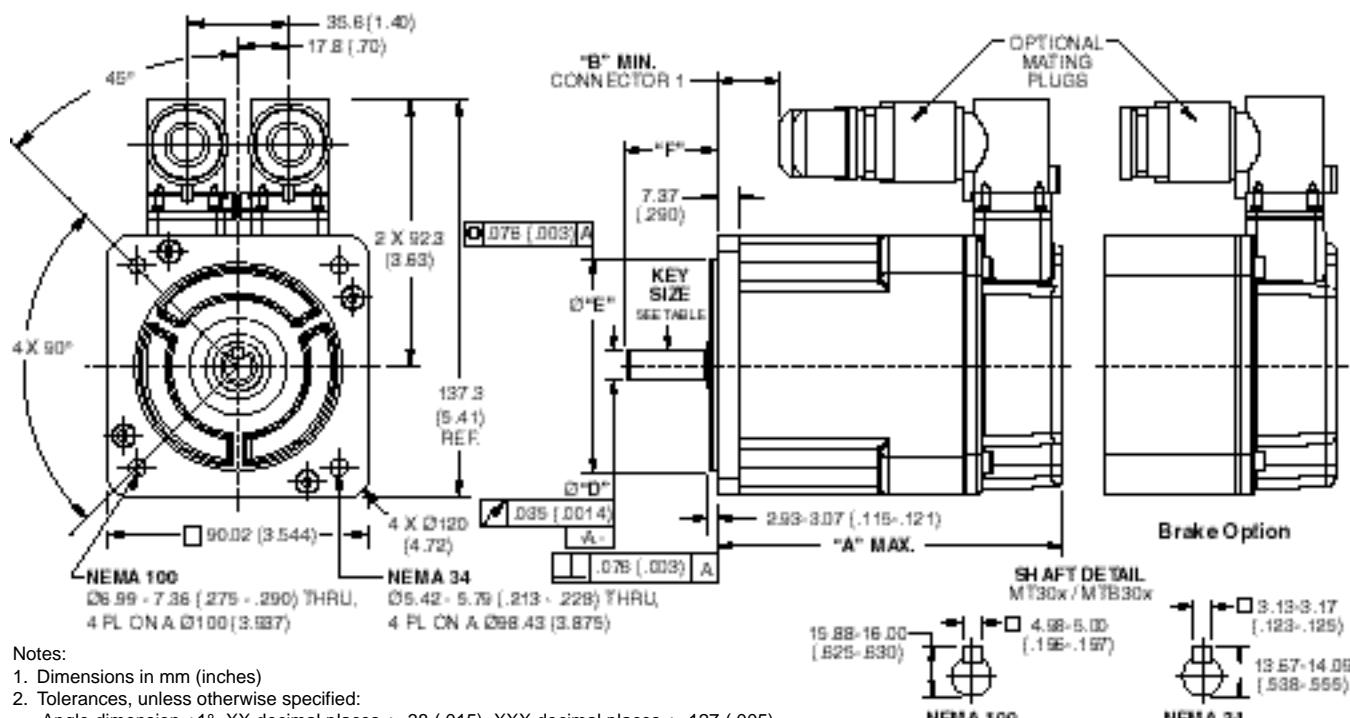

1. Dimensions in mm (inches)
2. Tolerances, unless otherwise specified:
Angle dimension $\pm 1^\circ$, XX decimal places $\pm .38 (.015)$, XXX decimal places $\pm .127 (.005)$
3. Motor receptacles can be rotated.

Notes:

¹ Part numbers shown are for encoder feedback. For resolver feedback: CRxx200-2Gxxxx1

² Part numbers shown are for encoder feedback. For resolver feedback: CS-SS-RHA1HE-03

For encoder models with brake: CS-SS-CHAAHBE-03, for resolver models with brake: CS-SS-RHAAHBE-03

³ Cable part numbers reflect 3 meter length. Cables are available in 3, 6, and 9 meter lengths (-03, -06, -09).

Maximum encoder cable length is 30 meters. Maximum resolver cable length is 75 meters.

Electrically Released Brake

ORDERING INFORMATION

External Regen Resistor Module:	ERH-26	200 Watts
Communications Cable:	A-97251-004	RS-232 communications cable
Connector Kit:	CK100	Mating connectors* for C1, C2, C4, C7 & C8 *Screw terminal mating connectors C3 and C5 are included with the SERVOSTAR CD amplifier.

Note: Custom mechanics - special shafts, keyways, and mounting are available.

Contact the Kollmorgen Customer Support Network (1-800-77 SERVO) for more information.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.

Learn more!

Visit us at artisantg.com for more info on price quotes, drivers, technical specifications, manuals, and documentation.

Artisan Scientific Corporation dba Artisan Technology Group is not an affiliate, representative, or authorized distributor for any manufacturer listed herein.

We're here to make your life easier. How can we help you today?
