# MM-6390D

512 MBYTE, 80 MBYTE/SEC TRANSFER RATE,  
DUAL-PORT VME/VME64/VSB DRAM MEMORY MODULE

A high-speed, dual-port, single card slot, high-density memory module, the MM-6390D provides up to 512 Mbytes for VME/VME64/VSB systems. It is intended for high performance applications employing Block Transfer at data rates greater than 80 Mbytes/sec. It also supports sequential access (BLT/MBLT) of 256/2K bytes on the VME/VME64 and 1 Kbytes on the VSB bus.

The Control Status Register (CSR), located in the short I/O address space, stores and reads byte-wide parity errors detected on the VME/VSB buses. The other bits enable Write-Wrong parity for diagnostics, disable the VME-port and determine whether the memory is CACHEable on the VSB bus.

Parity generation and checking are provided for each byte; parity status is stored and transmitted via BERR\*.

Reliability is ensured by burn-in and running memory diagnostics that check operation for 48 hours while temperature-cycling boards from 0 to 60°C. Also, reliability is backed up by Micro Memory's **Lifetime Warranty**.
