SBS Technologies, Inc. Embedded PPC Products Announces Palomar II, a PPMC Module-Hosting PPC 750 Processor

July 6, 1999

366-466 MHz PowerPC 750
64-256 MB or SDRAM, 1 MB L2 CACHE, 4.5MB Flash
Customized for specific applications in eight weeks

SBS Technologies, Inc.Embedded PPC Products (formerly V·I Computer) announces the availability of Palomar II, a PPMC module featuring the high performance PowerPC 750 processor. New PowerPC 750 processors offer lower core voltages, keeping the Palomar II within standard PMC power and dimension standards. Many telecom and datacom customers are designing in PMC sites on their baseboards and Palomar II is an easily upgradeable processor engine. "After the successful launch of Palomar I in November, we developed the Palomar II, which provides additional features that meet the growing demands of the telecommunications market and satisfy the current requirements of VITA32," stated Bret Farnum, General Manager.

Features Palomar II is configured with a 366 MHz PowerPC 750 processor, 1 MB L2 cache, 64 MB SDRAM (ECC), 4.5MB of Flash Memory, 2 serial ports and a JTAG port. Coupled with several real-time operating systems like VxWorks, Palomar II brings the processing power and memory of a 6U card to the PMC form-factor.
