AD2081 Series

RS-232 PORT EXPANDER

FEATURES

- 4 RS-232 device ports and 1 CPU port
- Selectable baud rate via dip switches
- Status LEDs on front and back of unit
- Installation friendly RJ-45 connections

The AD2081 is used to expand a single RS-232 port on a matrix switching system to four ports. Each of the four ports then has an alphanumeric designation such as 1a, 1b, 1c and 1d.

The Port Expander is compatible with the full range of American Dynamics Matrix Switcher/Controller Systems and Keyboards as well as accessory products such as the Alarm Interface Unit.

The AD2081 series is installation friendly, utilizing RJ-45 connectors for all device connections. It can be mounted virtually anywhere with the high-strength Velcro pads. Power on status and RS-232 activity is indicated with easy to see LEDs.
