

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

High-Accuracy, High-Sensitivity and High-Speed Optical Power Meter

Q8221

- **Various Optical Sensors and Light Sources Available**
- **High Accuracy :**
  ± 2.5% (at the Calibration Point)
  ± 4.5% (over the entire Wavelength Range)
  Linearity: ± 0.5%
- **Low Polarization Dependence :0.003 dB_{p-p}**
- **High Sensitivity : -94 dBm**
- **High Power Input Level : +27 dBm**
- **High Speed Measurement :**
  Sampling Rate of 100 times/sec

Q8221
Optical Multi Power Meter

■ Two-Channel Plug-In System

The Q8821 employs a two-channel plug-in system. Various optical sensors and light sources are available as plug-in units. The two channels of the Q8221 can be used individually or simultaneously. Free combination of optical sensors and light sources enables diverse applications.

■ Ensures Accuracy Over the Entire Range of Power and Wavelength

The optical sensors for Q8221 assure high accuracy of ±2.5% at calibration point. In broad band wavelength region, they assure ±4.5% accuracy by compensating the sensitivity curve over wavelengths of each sensors. Further more, the linearity of ±0.5% is assured. Not only at the calibration point, these sensors also assure at the broad band wavelength region and the level to be measured.

* Calibrations of Q82208,Q82215 and Q82216 at 1550 nm are also available as options (OPT.25).

■ Noise Level : -94 dBm

The Q82208 and Q82232 Optical Sensors achieve high sensitivity by cooling the InGaAs photo-diode. The Q82208 especially achieves -94 dBm. High power can be measured with high linearity up to +10 dBm .

■ Low Polarization Dependency Optical Sensors (Q82232) : 0.003 dBp-p or less

The Q82232 Optical Sensor achieves low polarization dependence of 0.003 dBp-p. By combining with Q8163 Polarization Scrambler, it can be used for high-speed and high precision PDL measurement of the optical devices.

■ Sensors with Less Reflection and High-Return-Loss Adaptor with Minimum Reflection

The Q82208 Optical Sensor uses optical fiber with slant polished ends to suppress reflection (return loss of 50 dB or more). When using a PC polished connector, a high return loss of 45 dB or more can be obtained with the low-loss, high-return-loss adaptor (typical return loss without this adaptor is 14 dB). This sensors fit optical fibers with a core diameter of 10 µm with NA 0.19 or less, making them suitable for measurement of dispersion shift fibers. FC, SC, ST, MU, LC and plug-in connectors are available.

■ High-Speed, High-Throughput Measurement. Max. 100 times/sec.

For all sensors, the Q8221 achieves a sampling speed of 100 times/sec. and a ranging speed (time required to move to a different range) of a maximum of 500 msec (minimum 20 msec). In addition, GPIB output can be transferred at a high speed of 100 times/sec., thus dramatically increasing the throughput of production lines.

■ Recording Function, PDL Measurement Function

Q8221 is capable of storing data containing 400 points with the A and B channels independently. Furthermore, stored data can be directly output to an external plotter as a graph. Also, PDL measurement is very easy with Q8221, because Q8221 can display maximum and minimum values as well as the difference between the maximum and minimum values of the measured data.

High-Accuracy, High-Sensitivity and High-Speed Optical Power Meter

Q8221

- **Q81212 Light Source Plug-In Unit Specifications**

Photoemittion element : FFP-LD
Wavelength : 1550 ± 20 nm
Spectrum half value : 10 nm or less
Output power : 0 ± 1 dBm*[1]
Output power(Variable) : 0 to -6 dB, in 0.1 dB steps
Stability :
(23 ± 1˚C/1min) ; ± 0.01 dB or less
(Between 0 to 40˚C ± 2˚C/1ch) ; ± 0.05 dB or less
(0 to 40˚C/8h) ; ± 1 dB or less
Output waveform : CW or chopped light ; 270 Hz (± 0.1%) with duty of 50 ± 5%, 2 kHz/4 kHz (± 0.1%) with duty of 50 ± 10%
Output connector : FC type
Preheating time : 60 minutes after power on

*[1] At the photoemittion edge of 2 m fiber (SM 10/125 µm)

Specifications

Optical Power Measurement Specifications

Sensor plug-in channels : 2 (Channels A and B)

Resolution:
dBm/dB display: 0.001 dB (or 0.0001 dB for data output via GPIB)
W display: Max.199,999 counts

Measurement mode:
CW or chopped light (270 Hz) measurement mode selectable

Sensor wavelength sensitivity compensation:
If a wavelength is entered, an internal compensation value for the sensor wavelength sensitivity at that wavelength is automatically applied.

Relative value measurement (dBr):
The value relative to reference value is measured and displayed in dB with a maximum resolution of 0.001 dB (or 0.0001 dB for data output via GPIB).

Unit display: W (mW, µW, nW, pW), dBm, dB

Display of measured value: 5-1/2 digit (7-segment FL Device)

Range : Automatic, manual, remote

Integration time: 100, 20, 7, or 2 msec.

Measurement speed:
Approx. 100 measurements/second (with 2-msec. integration time and one-channel operation)
Approx. 50 measurements/second (with 7-msec. integration time and one-channel operation)
Approx. 30 measurements/second (with 20-msec. integration time and one-channel operation)
Approx. 9 measurements/second (with 100-msec. integration time and one-channel operation)

Level meter:
Displays with up to 11 dots according to measured values.

Calculation function:
A/B, B/A, and CF
W display: Measured values is multiplied by a constant.
dBm display: Offset is possible.

Maximum hold function: Displays the maximum measured value.

Averaging function: The number of averaging can be set to 2 to 256 using the running averaging method.

Light Source Plug-In Unit Specifications

Unit Plug-in channels:
2 (Channels A and B)

Output power adjustment function:
The output power can be set from 0 to -6.0 dB with a setting resolution of 0.1 dB steps.

Output mode: CW or chopped light (270 Hz, 2 kHz, or 4 kHz) mode selectable.

Other Functions

Record function; PDL/PDR* measurement functions: Can store up to 400 measurement data items for each of channels A and B in the backup memory. Stored data items can be read by a personal computer via the GPIB interface. The maximum value, minimum value and the difference of them (Max.-Min.) are displayed.

Memory function: Up to five settings can be stored and read for each of channels A and B.

Direct plotting function: Measurement data items stored by the record function can be plotted directly to an external plotter in the form of graphs.

Brightness adjustment function: The brightness of the display can be adjusted in five steps.

Output functions specifications:

GPIB interface: IEEE488-1978

Analog output: Outputs analog signal which is proportional to the input optical power.

Output voltage: 0 to +2 V(F.S.) for each range

Output impedance: 0.5 Ω or less

Output connector: BNC Connector

General Specifications

Ambient temperature: 0 to +40˚C (85%RH or less)

Storage temperature: -25 to +70˚C

Power requirements: 100 to 240 VAC, 48 to 66 Hz

Power consumption:
50 VA or less (including the plug-in unit and sensors)

Dimensions: Approx. 212 (W) × 88 (H) × 360 (D) mm

Mass: 3.9 kg maximum (including the plug-in unit)

Standard accessories:

Power cable × 1
Fuse × 2
Instruction manual × 1

*PDR: Polarization Dependent Ratio
