Communications Processor

The C921-100 Communications Processor is an interface that allows the 984A or 984B to communicate with programming devices. Three MODBUS ports are available which allow for the servicing of more than one MODBUS device per scan. Port 1 is beneath the removable access plate on the front of the module. Ports 2 and 3 are on the bottom of the C921.

Another port beneath the front access plate provides a communications interface with the P964/965 Data Access Panels, and/or Simple ASCII output devices like a printer or display terminal. The P965 can also be attached to the controller by a MODBUS port.
