8-Channel 120 Ω Strain Relay Multiplexer HP E1355A Technical Specifications

- 8-Channel 120 Ω strain gage relay multiplexer
- Strain gage measurements with bridge completion
- + 5 V excitation circuitry—quarter, half, and full bridge
- Strain, voltage, current, and Ω measurements
- Automatic conversions for bridge configurations

HP E1355A

Description

The HP E1355A 120 Ω Strain Relay Multiplexer is a **B-size, 1-slot, register-based VXI module**. This relay multiplexer provides bridge completion and excitation voltage circuitry for up to eight channels. The multiplexer module consists of a B-size component card (labeled E1345-66201) and a screw terminal block that plugs onto the component card. The HP E1355A is functionally similar to the HP E1345A, E1347A, and E1356A.

You can perform strain gage measurements with automatic conversions to engineering units on multiple multiplexer channels by sending SCPI commands to the DMMs, HP E1326B or E1411B. Strain measurements supported in SCPI with these HP DMMs are quarter, bending half/full, poisson half/full, and bending poisson full.

Diagnostics for the HP E1355A include Tension Shunt, Compression Shunt, Leadwire Resistance, Internal Half Bridge Voltage, Guard Voltage and Bridge Excitation Voltage.

Refer to the HP Website for instrument driver availability and downloading instructions, as well as for recent product updates, if applicable.

Strain Measurements

Example SCPI commands with engineering units conversions follow:

Specify the gage factors:

—STRain:GFACTOR 2.11E-6, (@ 100:107)

Measure the unstrained reference:

—CALibration:STRain (@ 100:107)

Measure a Half Poisson bridge:

—MEASure:STRain:HPOisson (@ 100:103)

Strain measurements supported in SCPI with the above HP DMMs include:

- Quarter
- Bending Half
- Poisson Half
- Bending Full
- Poisson Full
- Bending Poisson Full

Diagnostics include:

- Tension Shunt Diagnostic
- Compression Shunt Diagnostic
- Leadwire Resistance
- Internal Half Bridge Voltage
- Guard Voltage
- Bridge Excitation Voltage

Configuration

One analog bus cable is shipped with each module, making it easy to connect multiplexer common outputs together for slot-adjacent modules. If you are using a B-size mainframe, HP E1300A/B or HP E1301A/B, use the analog bus cable shipped with the HP E1326B DMM to connect it to the multiplexer(s).

C-size Adapter

For installing the HP E1355A in a C-size mainframe, the HP E1403C active adapter is recommended.
