

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

ARINC-664 PCI

API-664 ARINC-664

PCI Module

Two Port ARINC-664 Test, Simulator and Monitor Module for PCI

General Features

The API-664 is AIM's new ultra high performance intelligent PCI (PCI databus Mezzanine Card) module offering full function test, simulation, monitoring and analyser functions for ARINC-664 (Avionics Full Duplex Switched Ethernet) networks. It's unique on board processing capability, memory resources, customised ARINC-664 MACs and IRIG-B time code decoder/ generator gives ARINC-664 users unparalleled features for the most demanding ARINC-664 applications.

The API-664 PCI module provides two ARINC-664 ports being configured as two single or one dual redundant ports each implementing a 10/100Mbit Full Duplex Ethernet interface.

Ports can operate concurrently in Traffic Simulator or Receiver/ Monitor modes with support for ARINC-664 port related Frame Statistics. Virtual Link (VL) packet capturing and monitoring features are complimented with powerful triggering and filtering capabilities.

The API-664 PCI module uses AIM's field proven 'Common Core' hardware design utilising two advanced RISC processors, one acting as Bus Interface Unit processor and one as Application Support Processor (ASP). The vast memory resources on board allow to implement large receive buffers and Complex Transmit scenarios on-board. An ARINC-664 specific Physical Bus Interface implements two full duplex ports for connection to ARINC-664 networks.

The API-664 PCI module is available with the optional fdXplorer, the ARINC-664 Network Analyser Software and the ParaView, the Parameter

Visualiser Software for Windows

- Two advanced 600 MHz XSCALE Processors on board
- Designed for applications such as:
- Test & Verification of 'End Systems'

- 'Switch' Testing
- Monitoring of traffic between 'End Systems' & 'Switch'
- Inter Switch Traffic Analysis
- Multi Stream High Level System Integration
- Programmable Ports - Traffic Simulator and Receiver/Monitor Concurrently
- Synchronised Timing across Multiple Modules
- Driver Software for Windows and Linux

Traffic Generation

The API-664 PCI module provides real time traffic generation on both ports concurrently. Transmitter operation allows users to fully programme all fields of the ARINC-664 Frame including the Virtual Link Identifier, MAC Source Address, IP Structure, UDP Structure, Payload and Sequence number. Multiple modes of transmit sequencing are supported, these being Generic / Replay and UDP Port oriented shaped Transmissions. Users can programme Payload Data with User Defined or Fixed Data. Inserting the Time Tag in the Payload Data provides an elegant solution to measure frame transmit delays through the network. Synchronisation of transmissions across multiple ports is achieved by using Strobe Inputs/Outputs.

- Programmable Timing & Sequencing of Frames
- Physical Error Injection - CRC, Gap, Size, Alignment
- Logical Error Injection on Layers 2, 3, 4
- Timing Error Injection - Violation of Bandwidth Allocation Gap (BAG)
- Autonomous Dynamic Data Generation
- UDP Port Simulation with Traffic Shaping & Sequence Numbering
- On-board support for sampling and queuing ports

UDP/VL Receive Mode

The API-664 PCI module ports can be configured to work in UDP / VL oriented receive mode. In this mode each UDP port has a separate buffer queue. Received frames are stored with frame headers containing time tag and status information. Frame header information can be stored and payload data optionally discarded for the testing of Switches and the complete network. With the Traffic shaping verification enabled, any violations are reported as errors in related frame headers.

- VL oriented Filtering
- Second Level Filtering on Generic Frame Parameter
- Time Stamping of Received Packets with extended IRIG-B time code (1µs)
- Physical Error detection, Frame Level - CRC, Gap, Size and Alignment
- ARINC-664 Specific Error Detection
- Traffic Shaping Verification
- Verification of MAC, IP and UDP Headers
- VL oriented Integrity Checking

Chronological Receive Mode (Monitor Mode)

The API-664 PCI module ports can be configured in Chronological Receive Mode to sequentially receive frames and store them in a circular buffer. The payload data can be discarded to optimise the use of the buffer for frame capture and analysis. Powerful Filtering, Triggering, Complex Triggering and Capture Modes allows users to select only the frames, data and errors of interest. Monitor Mode also provides activity monitoring and statistics for each VL recorded by the API-664 PCI module. The interface modules report the number of frames received and the number of errors detected globally and in VL orientated format.

- VL Orientated Receive and Filtering
- Second level filtering on Generic Frame Parameters
- Chronological Monitor with Time Stamping to 1 μ s
- Massive on-board Monitor Buffer
- Inter frame Gap time measurements with 40 nsec resolution
- Comprehensive Triggering / Filtering / Capturing
- Programmable Data Capture Modes - Trace after Trigger & Recording
- Physical Error Detection - CRC, Gap, Size and Alignment
- ARINC-664 Specific Error Detection

Application Support Processor

The 600 MHz Application Support Processor (ASP) provides unique on-module processing functions typically provided by host PC processing systems.

- IP and UDP layer of the ARINC-664 protocol
- Driver Software Execution on the board
- Dynamic Data Generation
- Loop / Pollution between Rx and Tx port
- Automatic Test Sequence Generation
- Program using Real Time operating systems

IRIG-B Time Code Decoder

An on board IRIG-B Time Code decoder and generator allows synchronisation of multiple ARINC-664 ports using multiple API-664 modules. Modules can be synchronised using an external IRIG-B time source or the on-board Time code generator of one module as the reference for accurate correlation of data across multiple ARINC-664 ports.

ARINC-664 PCI Physical Bus Interface

The API-664 modules provide two ARINC-664 ports which can be used as two single channel or as

one dual redundant channel ARINC-664 specific.

Bus Interface

- Customised Media Access Controllers (MAC's) implemented in FPGA optimised for ARINC-664
- 2 MByte Transmit / Receive Burst Buffer
- Physical Interface and Magnetics (COTS)
- 8-socket Network Interface connectors - RJ45
- Trigger, Strobe and Time Code I/O connector

Driver Software Support

The API-664 PCI module is supplied with an Application Programming Interface (API) and Drivers compatible with Windows and Linux.
