HOW TO BUY

VESTA Standard

PUBLIC SAFETY: ADVANCED CALL PROCESSING

VESTA Standard is a key-system solution designed for users that prefer a conventional approach to call processing. It has set the benchmark for computer telephony integration 9-1-1 solutions since 1995. Today, VESTA Standard is used in more public safety answering points (PSAPs) than any other CTI 9-1-1 solution.

VESTA Standard can accommodate the needs of any size PSAP. It combines the proven MAARS (modular ANI ALI retrieval system) and ComCentrex electronic key system with the VESTA intelligent telephone interface.

The MAARS ComCentrex customer premises equipment is available in variable size configurations all of which are inherently flexible, scalable and reliable. VESTA centralizes call-center functionality on an open platform that can integrate telephony functions with mapping, incident tracking, radio, computer aided dispatch (CAD), digital logging and numerous third party applications. In addition to providing a comprehensive tool set, VESTA Standard features the following advanced functionality:

- Customizable user interface
- Programmable hot keys
- Unlimited speed dial
- Pre-recorded greeting per agent
- Advanced Teletype (TTY) for speech and hearing impaired
- Instant recall recorder (IRR) and note taking functionality
- Configurable ALI display supports any format requirements
- Totally modular with no single point of failure

PEI products are sold, implemented and maintained by our channel distribution partners. We are committed to providing support for these channels through PEI's legendary support services. For more information on VESTA Standard, or to contact a PEI representative, please click here.
