E151

3U CompactPCI Development Platform

Aitech's E151 3U CompactPCI Development Platform provides a versatile, easy to use, low cost environment for development of 3U CompactPCI systems and application software.

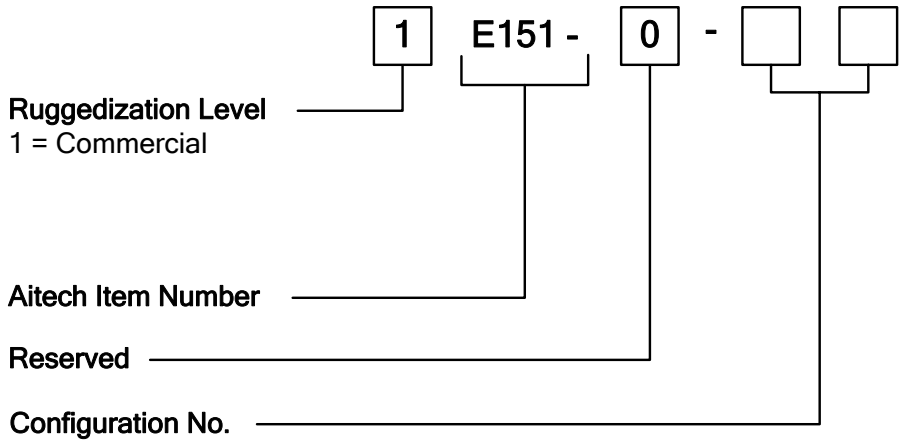

The development platform includes a 4-slot CompactPCI backplane with rear I/O, an integral power supply, and a fan unit. The 32-bit CompactPCI bus operates at 33/66 MHz.

The E151 can be ordered without boards, or with one or more Aitech air-cooled 3U CompactPCI SBCs. System capability can be expanded by adding PMCs/XMCs to SBCs, or using Aitech PMC carrier boards. The E151 will also accommodate third party standard 3U CompactPCI boards.

SBC and PMC/XMC I/O can be easily accessed using transition modules with standard I/O connectors, assembled from the rear of the E151.

Refer to the datasheets for the various Aitech 3U CompactPCI SBC, PMCs, XMCs, PMC/XMC Carriers, and Transition Modules for more information regarding the potential capabilities of the E151 3U CompactPCI Development Platform.

Ordering Information for the E151
