## I/O Scanners

The I/O scanners (5150-RS2, -RS5) interface with 1771 remote I/O adapters and other adapters that are compatible with the Allen-Bradley remote I/O link. The I/O scanners store I/O image tables that the logic processor can read from and write to; and they perform I/O scans independent of and asynchronous to the program scan.

In addition, the remote/local I/O scanner (5150-RS5) has a local I/O channel that links to a 1771-ALX adapter residing in a 1771 I/O chassis.

The RS2 and RS5 both contain I/O image files that store input and output data. Scanner memory also contains block-transfer data, block-transfer control information, and internal storage data.

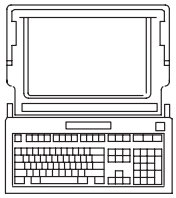

## Other Pyramid Integrator Modules

The PLC-5/250 processor system is one possible configuration for a Pyramid Integrator system. There are other modules available for a Pyramid Integrator system:

- OSI Interface
- MicroVAX Information Processors
- Ethernet Interface
- CVIM™ Modules

For more information about these modules, see the Pyramid Integrator System System Overview, publication 5000-2.3.

## Programming Terminal

Connect a programming terminal to the RM or a KA. Use the programming terminal to program and monitor this PLC-5/250 processor as well any processor on any DH+ link in your system.

These terminals have been tested as programming devices for the PLC-5/250 processor using the DOS version of 6200 PLC-5/250 Programming Software, release 4.1 and later.

| Programming Terminal | Operating Systems |
|---|---|
