Anticipatory Engineering Achieves Unrivaled Application Versatility

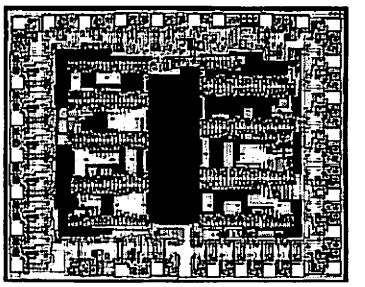

Acknowledging that progress is on-going and often has an impact on application requirements, PANALARM engineers have designed into Series 90 the capability of coping with change. In effect, Series 90 anticipates potential changes in requirements by offering the versatility for customized modification, now or later, with a *standard* annunciator system.

To achieve this engineering philosophy, PANALARM's highly advanced Series 90 combines I²L custom microchip logic with microprocessor technology to deliver flexibility through a multitude of on-board and remote options. This permits the freedom and economy of limitless customizing of small or even the largest most complex systems from *standard* modules.

Series 90 has the inherent versatility to provide six capabilities; (1) standard annunciation; (2) integral or remote logic architecture; (3) input/output functions for customer customizing; (4) meter set (digital readout and point selection) analog monitoring; (5) blind set analog monitoring; and (6) RS-422 computer interface.

LOGIC

Linear and digital I²L circuitry combined on same chip.

The innovative combination of I²L microchip logic and microprocessor technology provides integrated circuit logic cards with inherent customizing capabilities to perform any desired system function. I²L and linear design techniques used provide a means for reliable interface, circuit protection and excellent noise immunity.

Dedication of a single custom IC per point eliminates the multipoint failure possibility present with common logic point cards. Even with twinpoint logic cards, dedicated IC logic per point is used to isolate point monitoring functions.

In addition to the nine standard operational sequences described on Pgs. 14 and 15, the IC can be custom programmed to provide many other sequence variations which enhance system performance by supplying additional information.

Some of the multiple options available by customizing the IC card include integral auxiliary relays; optical isolation for AC or DC inputs and output switching; field voltage disconnect upon card removal; card status indicator; relay lockout on test; transistor switch output for computer or PC interfaces; reflash; slave lamp output for remote indication; and on/off indication for status applications. Many of these options are detailed on Pgs. 18 and 19.

Description Of SERIES90 System Concept

By utilizing modular package design, combined with I²L microchip logic and microprocessor technology, PANALARM's standard Series 90 provides more features than any other system available.

This unsurpassed versatility permits complete engineering freedom in original system design or in subsequent field modification. You specify the features required, without paying for additional unwanted features forced on you by rigid design. Yet extra features may be added later, simply and inexpensively.

The Module

Each module houses cards, terminals, and bus wiring for up to four points. The lightbox housing mounts to the front of the module. Nameplates snap onto the lightbox. Single, dual, triple and quad nameplate configurations per module are offered in a choice of colored nameplates or colored filters (behind standard white nameplates) for color coding. Modules can be arranged in matrix fashion up to 10 high by 10 wide in flush, wall or rack mounting configurations.

For analog monitoring, a unique two card system enables each module position to be used for any input function available in Series 90, thus permitting field change of annunciator point requirements by simple card substitution or addition.

A sequence card (one or two points per card) is located in module slot A and/or C depending upon requirements.

An analog card is then positioned in module slot B and/or D. The analog card receives the transducer signal and compares it to predetermined setpoints. The analog card is designed to provide complete input/output and line isolation enabling use of grounded or ungrounded sensors. Internal crossover communication links in the main bus plane are provided between adjacent card slots (A and B/C and D) for connection of the sequence and analog card interface. No customer wiring is required for the sequence/analog card set interface. All calibration is achieved via front access twenty turn pot adjustments and plug-in jack reference read and calibration points.

The Sequences

Nine operational sequences are standard, although over 40 additional sequences are available. Standard single point cards utilize an I²L custom microchip per card to provide sequence logic and initiate auxiliary functions. Twinpoint cards are furnished with two independent circuits per card to eliminate the risk of multiple point loss.

Input/Output Functions

Series 90 provides seven terminals per card position for user input/output functions. Integrally mounted input options for dry contacts, transducers, or special signal devices and voltages permit user customizing to satisfy practically any input requirement. The capability to accept a variety of input types allows Series 90 to directly monitor those variables which previously required an interposing device or were not independently monitored.

Integrally mounted output options allows the same flexibility in the form of dry contacts, optical couplers, electronic signals and transistor switches for interface to other instrumentation.

Analog input signals from thermocouples, RTDs, load cells (strain gauge), thermistors, active (4 wire) or passive (2 wire) voltage or current transducers are received directly into Series 90 systems in any combination. The signal is monitored by the analog input card which then communicates setpoint information to the annunciator sequence card.

Communication Link System

Series 90 cabinets and remote chassis can be furnished as communication link systems allowing full duplex RS-232/422/485 communication with your computer. With this option, your computer can show cabinet window displays, event printouts, analog point trending graphs, selective logs, activity lists (status transmission on request), critical lists (priority interrupt transmission), complete analog input point data, etc. Request PANALARM Bulletin 90RS for complete details.

Remote Logic/Split Architecture

Series 90 remote logic chassis, racks and lamp cabinets are particularly suited for larger systems and limited space applications. Rack mounting in 19" chassis will house 20 cards. Using twinpoint cards, this permits up to 40 points of annunciation in a compact area. Each module in the lamp cabinet can be divided into as many as eight individual indications for panel space savings and console mounting applications.

Approvals/Listings/Certifications

Series 90 systems are formally listed for use in general purpose applications and as non-incendive, for use in Class I, Division 2 locations. Additionally, wall mount and panel mount enclosures suitable for purging (for Class I, Division 1 locations) are available. Appropriate intrinsic safety barriers are approved for use with signal input devices located in Class I, Division 1 locations. Contact your local PANALARM representative or the factory for further information (Ref. Bulletin ALC, Approvals/Listings/Certifications Guide and Bulletin 201-ISB, Intrinsic Safety Barriers)

SERIES90 Features

General

- High density packaging.
- Seven terminals per card position for customer use.
- 1, 2, 3, or 4 cards per module.
- Universal bussing permits system modification, expansion, or change of inputs and outputs in the field.
- Continuous solderless bussing of unique design with a minimum number of actual connections.
- Front access logic cards.
- Totally enclosed rear access terminals provide safety and protection of incoming field wiring on standard integral systems.
- Card status indication and auxiliary relay lockout on test options.
- Single or twinpoint plug-in cards for integrity, reliability and economy (dedicated point circuitry).
- On board L.E.D. diagnostic indicators.
- Alarm priority recall eliminates loss of alarm information for points that alarm during functional test.
- Derated component design for high reliability and extended operating life.
- Integral or remote logic and power supplies.
- Integral or remote pushbuttons.
- Pull-out bezel for easy lightbox removal.
- Four methods of point color coding.
- Modular construction, any matrix configuration up to 10 high by 10 wide.
- Flush, wall or rack mounting.

Sequence Cards

- Power disconnect to field contacts upon card removal.
- Direct interface capabilities to programmable controllers, microprocessors and computer control systems.
- Nine standard operational sequences plus variation options to meet application needs. Includes, but is not limited to, ISA standard sequences.
- Integral relay contacts, electronic signal, transistor switches or optical couplers for auxiliary outputs.
- AC or DC direct input capabilities on a per point basis (optically isolated).
- Field selectable NO or NC signal contact actuation.
- Reflash, time delay, optical coupler input, power failure monitor and power transfer options can easily be incorporated into the system.

Analog Cards

- Complete point-to-point electrical isolation.
- On-line, front access calibration.
- Customer selectable High-Low trip point monitoring.
- Independent alarm and trip setpoints.
- Single or dual setpoints per transducer input. Up to four setpoints can be accommodated in one module position from a single transducer or two transducers each having two setpoints.
- Auxiliary contacts available (integral) on annunciator sequence card (NO or NC).
- Sensor failure indication and alarm.
- Continuous monitoring of field sensors.

Additional Features Of Blind Set (Code AB) Analog

- Field changeable from standard dry contact monitoring to analog monitoring by simple card substitution. No additional rewiring other than field input device connections.
- Customer selectable monitoring ranges (most input types).
- Customer selectable deadband.

Additional Features Of Meter Set (Code AD) Analog

- Microprocessor-based, continuous monitoring digital display readout. Plus symbol display for °C, °F, engineering units (E), or custom symbols (consult factory).
- Display shows: status of point (alarm or normal), setpoint monitored as High or Low, ambient temperature in °C/°F at cold junction for T/Cs, and line resistance for RTDs; diagnostic codes for display-to-point communication; beyond limit High or Low indication; sensor failure indication; point select identification by dim illumination of module position addressed.
- One digital display handles all input transducers.
- Electronic, self-checking drift correction to High and Low limit references.
- Analog output of 4-20mA and/or 1-5V, isolated from system supply voltage. Segment expansion permits minimum of 20% of monitored span to be expanded to full output range (positioned at any part of input span).

Custom Integrated Circuit For Sequence Cards

All operational sequences are generated by a custom integrated circuit (IC) which is the heart of each sequence card alarm point. This IC is available in two package sizes, 16 pin and 28 pin. Both sizes have similar internal logic, except the 28 pin version has increased sequence capability and output functions. Prior to January 1992, sequence card model numbers ended in odd and even numbered GP designations, e.g., 1GP, 2GP, 4GP, 8GP, etc. Odd numbered GP's were used to indicate the use of the 28 pin IC; even numbered GP's were used to indicate the use of the 16 pin IC. As stated, these designations are no longer used as part of the sequence card model number.

SERIES90 General Specifications

Mechanical

Packaging: All plastics are U.L. 94-VO rated.

Buses and Terminals: Bright tin plated copper alloy.

Terminal Connection: Barrier type terminal rows located vertically behind each card slot (see illustrations on pages 16 and 17). Terminations are made to slotted binder head #6-32x3/8" long screws. Barrier spacing permits use of lugs up to 5/16" wide.

Cabinets: 16 gauge steel. Baked black enamel (flush mounted units) or zinc plated blue chromate dipped (remote chassis).

Construction: NEMA 1 ventilated (flush mount units). (NEMA 12 and NEMA 4 available, consult factory)

Knockouts: 3/4" conduit, one per row each side and one per column top and botton.

Temperature Range:
Operating: 0 to 50°C Ambient (32 to 122°F)
Storage: -40°C to +85°C (-40 to 185°F)
Humidity: 10% r.h. to 95% r.h., non-condensing.

Electrical

Power Supply:

Input Voltage		Input Voltage Min.	Input Voltage Max.	Available Signal Contact Voltage
120 AC 50-60 Hz		105	130	24, 48 or 125 VDC
240 AC 50-60 Hz		210	260	24, 48 or 125 VDC
220 VDC	20% maximum allowable ripple	200	250	24 VDC
125 VDC		105	140	24 or 125 VDC
48 VDC		40	64	24 or 48 VDC
24 VDC		20	32	24 VDC

System Logic Voltage: 24 VDC (25.5 VRMS ±15% unfiltered DC).

Lamps: Nominal 28 V, 40 mA per lamp. #85 subminiature wedge base (T 1-3/4).

Loading (Watts): Sequence Card:
(28 Pin) Single Point 1.3 W Twinpoint 2.6W
(16 Pin) Single Point 0.9 W Twinpoint 1.8W
Single point, 24FC with T, NL, KN or KP input, add 0.072 W
Twinpoint, 24FC with TA, TB, NL or KN inputs, add 0.144 W.
Analog Input Card (Meter Set): Single setpoint, or dual setpoint, 2.5W; (add 0.75W for LC or PXD inputs).
Analog Input Card (Blind Set): Single setpoint, or dual setpoint, 2.3W; (add 1.0W for LC or PXD inputs).
Analog Output Card: Single output, or dual output, 3W.
Digital Display: 9.5W.
Lamp Load: 1 watt per lamp. (2 lamps per point or window indication except 91LA or 91LBX which has 4 lamps, i.e., 91LA01, 4 W load; 92LA01, 4 W load; 93LA01, 6 W load; 94LA01, 8 W load).
Integral Auxiliary Relay (Coil): 0.5 W load.
Integral Output Optical Coupler: 0.4 W load.

Sequence Card Signal Inputs

Leakage/Series Resistance:

Nominal Input Voltage	% of Nominal without Component Damage	Maximum Current	Maximum Series Resistance	Minimum Leakage Resistance
Type T and NL (Dry Contact Input)				
12 VDC	200%	3 mA	6.5 KΩ	60 KΩ
24 VDC	200%	3 mA	6.5 KΩ	45 KΩ
48 VDC	200%	3 mA	5.0 KΩ	65 KΩ
125 VDC	135%	3 mA	5.0 KΩ	150 KΩ
Type KN (Optical Isolator)				
5 VAC/DC	200%	3 mA	1 KΩ	10 KΩ
12 VAC/DC	200%	3 mA	10 KΩ	10 KΩ
24 VAC/DC	200%	3 mA	10 KΩ	25 KΩ
48 VAC/DC	200%	3 mA	10 KΩ	50 KΩ
120 VAC	200%	3 mA	10 KΩ	100 KΩ
125 VDC	200%	3 mA	10 KΩ	100 KΩ

Note: Maximum series resistance and minimum leakage resistance values are valid if field contact voltage is ±15% of nominal.

Surge Withstand Capability: Signal contact voltages of 24V or higher tested and passed per ANSI/IEEE C37.90-1978 (SWC).

Radio Frequency Interference Susceptibility: Systems with K, NL and T type signal inputs and 120 VAC power input (all external wiring shielded) designed to meet SAMA PMC 33.1-1978, Class 2, Bands b & c (10 volts per meter from 50 MHz to 1000 MHz).

KN Isolation: Optical coupler input, 1066 VRMS continuous and 1770 VRMS surge.

Standard Response Time: 20 mS ± 3 mS.

Resolution Time: (First Out Sequences) 6 mS.

Optional Time Delays (for Input Response): 2 mS to 500 Sec.

Pushbutton Interlock: Operating a pushbutton out of its proper sequence will not affect sequence card function.

Test: Full functional (lamp test only, optional).

Sequence Card Outputs

Integral Relay Contacts: 5A @ 120 VAC or 28 VDC (resistive). Form A, B, or C available

Optical Coupler Output: KT, KC, KE. Transistor rated 30 VDC, recommended max. voltage 18 VDC. Max. current 5 mA. Saturation voltage 0.3 V @ 5 mA.

Electronic Output (E*): Open collector (NPN) emitter tied to system common. Outputs low when active. Rated 20VDC (24 max.), 10mA max. Vce Sat. 2.0 V @ 10mA. Leakage current less than 5μA @ 18 VDC.

SERIES90 Specifications

Meter Set Analog Cards

Voltage: 0.2 to 1, 0 to 1, 1 to 5, 0 to 10, -5 to +5, -10 to +10 and -1 to +1 VDC.

Current: 0.4 to 2, 1 to 5 and 4 to 20 mA.

RTD: 100 ohm Pt (DIN Standard) @ 0°C; 10 ohm Cu @ 25°C; 120 ohm Ni @ 0°C; and 100 ohm Ni (DIN Standard) @ 0°C, 2, 3, or 4-wire.

Thermocouples: Types J, K, T, E, R, and S. Cold junction compensation (90ATB1) is provided and linearization of output is included.

Load Cell (Strain Gauge): Ƶ >350 ohms output, 3.5mV/V to 5.0mV/V bridge excitation @ 10V; Ƶ >180 ohms output, 7.0mV/V to 10mV/V bridge excitation @ 5V.

Thermistor Inputs: Thermistors listed (or ones with equal resistance-temperature curves and repeatability) are recommended.

Fenwal Part Number	Yellow Springs Inst. Part Number	Range °C	Resistance in ohms @ 25°C
UUD21J1	44001A	-70 to + 25	100
UUD23J1	44002A	-50 to + 60	300
UUB25J1	None	-40 to + 75	500
UUB31J1	44003A	-25 to + 90	1000
UUA32J3	44004	-10 to +115	2252
UUA33J1	44005	0 to +125	3000
UUA35J1	44007	+10 to +150	5000

Response Time: 400mS, except for RTD inputs (2 sec., max). Expanded time delays available.

Sensor Lead Resistance: Voltage monitoring up to 900 ohms. Current monitoring up to 10 ohms (5 ohms for copper RTD).

Input Impedance: 1 megohm.

"Channel" Isolation: Input, output and line isolation provided by on-board power supply and optical couplers.

Common Mode Rejection: Analog input to system common, 90 db. (0 to 20 KHz).

Setpoint Accuracy: ±0.1% of span.

Setpoint Adjust: 20 turn pot with setpoint reading on digital display.

Repeatability: ±0.1% of span.

Deadband: Standard 1%; optional 0.5, 2, 5, or 10% of span (factory set).

Measuring Circuit

Temperature Stability: ½ digit from 0° to 50°C ambient.

Input Line Effect: Less than 0.05% of span for ±10% change in line voltage.

Resolution: ±½ digit.

Analog Output Features

Digital meter readout, annunciator visual and audible alarms and auxiliary outputs (contact, optical coupler or electronic), isolated analog output (1-5V and/or 4-20mA linearized), digital output (consult factory).

Trip Modes: Single High or Low; dual High-High, High-Low, or Low-Low. Up to four setpoints may be used for one input.

Meter Readout: Digital display; °C, °F, or 0 to 100% linear or square root. Engineering units and special ranges also available. Consult factory.

Additional Display Data: Point value, setpoints, display check, point transducer type, point alarm status, point High or Low setpoint, cold junction temperature for thermocouples and lead resistance for RTDs.

Digital Display Accuracy: ±1°C. Microprocessor based with Auto Zero circuit for self-calibration check.

Analog Output Accuracy (% of Span)

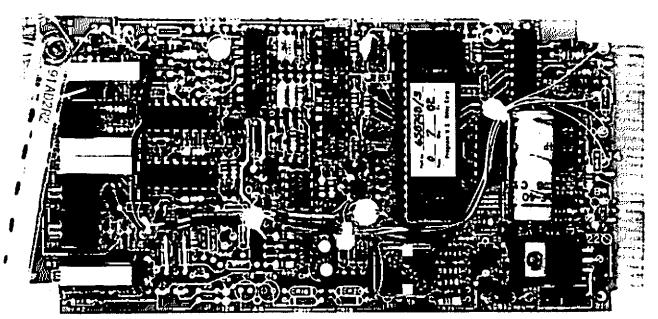

Temperature Stability: ±0.5% of span from 0° to 50°C.

Linearity: ± 0.2% of span.

Repeatability: 0.2% of span.

Compliance: 15V @20mA.

Output Impedance: Less than 1 ohm (1 to 5V).

SERIES90 Specifications

Blind Set Analog Cards

Voltage: 0 to 1, 1 to 5, 0 to 10, -5 to +5, -10 to +10, and 0.25 to 1.25 DC.

Current: 0.4 to 2, 1 to 5 and 4 to 20mA.

RTD: 100 ohm Pt @ 0°C (DIN Standard), 10 ohm Cu @ 25°C, 120 ohm Ni @ 0°C; 2, 3, or 4-wire.

Thermocouples: Types J, K, T, E. Cold junction compensation (90ATB2) is provided and upscale thermocouple open indicataion is standard.

Load Cell (Strain Gauge Bridges): Input span, 2 to 5 mV/V max., excitation 10.0 VDC for 350 ohm (or greater) bridge impedance. 4 to 10 mV/V max., excitation 5.0 VDC for 180 ohm (or greater) bridge impedance.

Thermistors: Same as meter set. See chart Pg. 5.

Response Time: 150 ms min., 225 ms max.

Sensor Lead Resistance: Voltage monitoring up to 900 ohms. Current monitoring up to 10 ohms (5 ohms for copper RTD).

Input Impedance: Thermocouple, 1 megohm; voltage signal, 1 megohm.

"Channel" Isolation: Input, output and line isolation provided by on-board power supply and optical couplers.

Setpoint Accuracy: ±0.2% of span.

Setpoint Adjust: 20 turn pot.

Deadband: Standard by jumper blocks to 0.5, 1, 2, 5, or 10% of span (unless otherwise specified, factory set for 1%).

Ambient Temperature Stability: Less than 2% of span change per 25°C change in ambient.

Input Line Effect: Less than 0.05% of span change per 10% change in line voltage.

Trip Modes: Single High or Low; dual High-High, High-Low, or Low-Low. Two dual setpoint cards may be paralleled to obtain four setpoints for one input.

System Common Outputs:

Annunciator visual and audible alarms and auxiliary outputs (contact, optical coupler, electronic). (Also, see Pages 20-23 and Pages 33-35.)

Flasher/Audible Output Card:

Load: 1.5W (1DN option, add 0.5W).

Audible Signal Output: Open collector (NPN). 40 VDC max., Vce Sat. 0.6 V @ 250 mA. Current limited to approx. 0.4 A., including any capacitive inrush. Leakage less than 1μA @ 40 VDC.

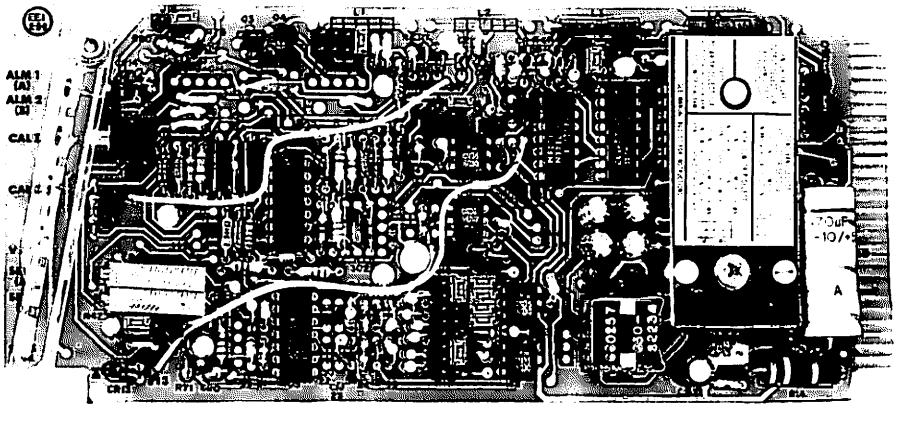

Flash Rates: Fast flash 4 Hz ± 15%, slow flash 1 Hz ± 15%.

Capacity: 300 points

Remote Auxiliary Relay: 90AX1 or 90AX2. 3 Form C contacts.

Load (Coil): 1.5 W.

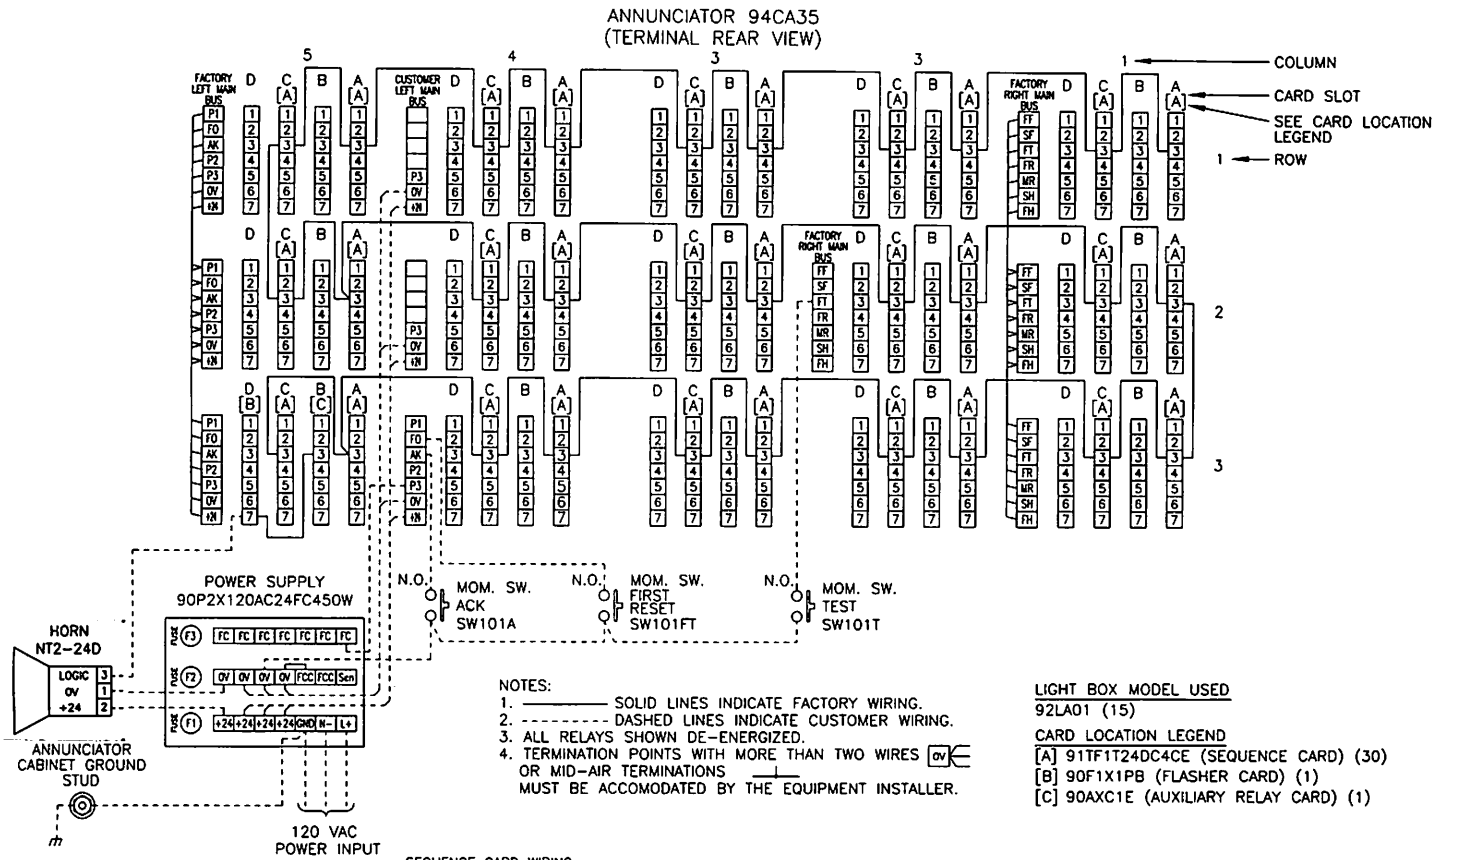

Contact Rating: 5 A @ 120 VAC or 28 VDC (resistive).

SERIES90 Custom Wiring Diagram

At a modest price, PANALARM can provide a composite-wiring diagram, customized to the exact configuration of your Series 90 system. The diagram incorporates all components of the annunciator system including remote devices such as auxiliary relays, horns and pushbuttons. CAD, generated the wiring diagram is extremely beneficial for customer start-up, virtually eliminating field problems related to wiring confusion. This diagram will also serve as a shortcut to help customers with tying in the annunciator to their overall system drawing requirements.

Please ask your local PANALARM representative to include a "CAD" diagram with your next annunciator purchase. Depending on the size of the annunciator system the hard copy drawing will be either 11" x 17", 17" x 22" or 22" x 34". The finished diagram is also available as an electronic AutoCAD or DXF file. The electronic file must be specified at the time of ordering. A sample diagram is shown below.

SERIES90 INTEGRAL Packaging/Dimensions

Modular Flexibility

For integral logic systems, Series 90 offers a choice of modular flush mount or wall mount cabinetry. Each Annunciator cabinet is assembled using four terminal blocks per module. Each module will accommodate 1, 2, 3, or 4 logic cards.

Model Number Explanation:

① ② ③ ④ ⑤ ⑥

① **94** = Series 90, 4 terminal blocks per module

② **CA** = Type of cabinet (flush mount)

③ **1** to **10** = Module rows high

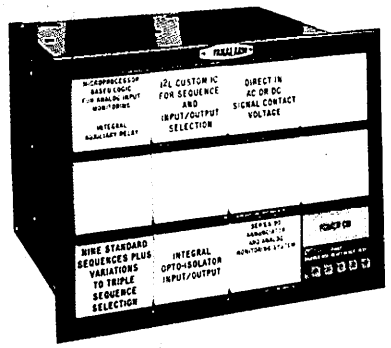

④ **2** to **10** = Module rows wide

⑤ **CF1** = One cabinet cooling fan, 120V, 50/60 Hz (Required only for cabinets with 11-25 analog input cards)
CF2 = Two cabinet cooling fans, 120V, 50/60 Hz (Required only for cabinets with more than 25 analog input cards)

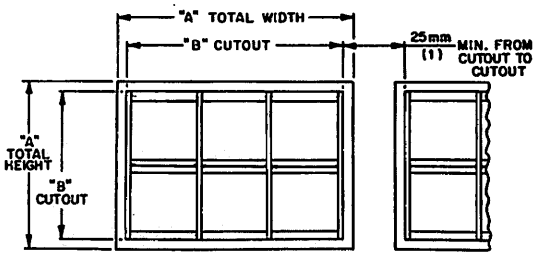

⑥ **G7** = Optional gold plated bus (card edge contact) finish
G8 = Optional gold flashed bus (card edge contact) finish

Module 94CA Flush Mount Cabinets

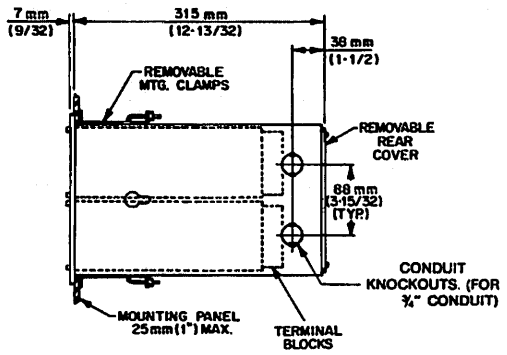

Suitable for any number of modules from 1 H by 2 W to 10 H by 10 W. Lamps accessible by removing snap-off window nameplates. Plug-in alarm cards accessible by removing pull-out lightbox assemblies. Refer to pages 12 & 13 for lightbox information.

NEMA 4 or 12 Surface Mount Cabinets

94CA cabinets are available mounted and wired in surface mount enclosures.
Enclosures for cabinets up to 5 high by 8 wide are available in either NEMA 4 or NEMA 12 versions. Larger enclosures, NEMA 12 only.
To order a 94CA57 in an enclosure, for example, specify a type C5, NEMA 4 (or NEMA 12) surface mount cabinet.
Door mounted pushbuttons and audible devices are optional.

Model 90CF_ Special Purpose Cabinets

Totally enclosed non-ventilated (TENV) cabinet suitable for air purging. 90CFH with locking "T"-handle (illustrated) or 90CFT with thumbscrews.

Model 94WMA5 Wall Mount Cabinets

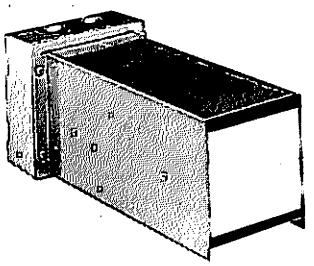

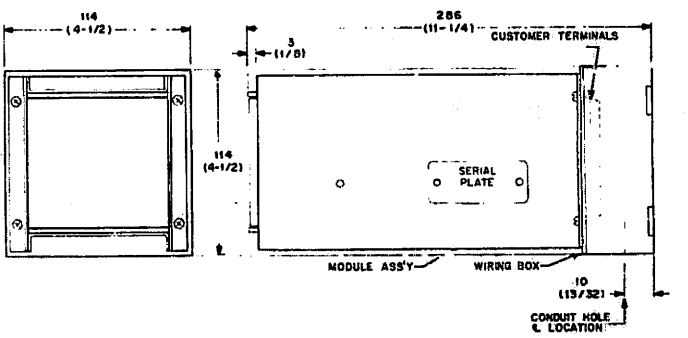

Each wall mount unit provides 5 modules, 1 H x 5 W. Four terminal blocks per module wired from front. Model 94WMR5 for remote logic has same dimensions, except no lightboxes.

Rows High	Dim. "A"
1	270 (10⅝)
2	540 (21¼)
3	810 (31⅞)
4	1080 (42½)

Model 90WM1* Wall Mount Single Modules

Individual wall mount units with 3 terminal blocks plus 2 main bus terminal blocks accessible by separating module assembly from wiring box. Typically used for remote mounting of flasher cards and power supplies (90P1 or 90P3).

SERIES90 REMOTE Packaging/Dimensions

Remote Logic

For remote logic applications, Series 90 is available in a variety of rear or front access rack chassis, with or without integral power supply, and with terminal blocks or cable connectors. Additionally, as described on Pg. 8 a wall mount remote logic cabinet is available as Model 94WMR5. If cable connectors are not specified, all Series 90 remote equipment provides 4 terminal blocks per logic module.

Model No. Explanation for Remote Logic Chassis

94RM ___ ③ ④

SERIES 90 REMOTE LOGIC RACK MOUNT CHASSIS

CHASSIS STYLE VARIATION CODE
01 = 5 MODULES WIDE, REAR ACCESS TERMINALS
02 = 5 MODULES WIDE, REAR ACCESS TERMINALS, WITH LIGHTBOXES (9"LA")
03 = 5 MODULES WIDE, FRONT ACCESS TERMINALS
04 = 5 MODULES WIDE, FRONT ACCESS TERMINALS, WITH LIGHTBOXES (9"LA")

94RC ___ ③ ④

SERIES90 REMOTE Packaging/Dimensions

Front Access 19" Rack Mount Logic Chassis

Model 94RM03—Five modules, 1 H x 5 W, terminals wired from front.

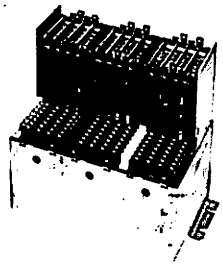

Model 94RM03LXX****—Without integral power supply. Five modules 1 H x 5 W, front access cable connectors for lamps. When cable connectors are specified, a connector plate replaces terminal block. Mounting dimensions are unaltered.

Rows High	Dim. "A"
1	178 (7)
2	356 (14)
3	534 (21)
4	712 (28)
5	890 (35)

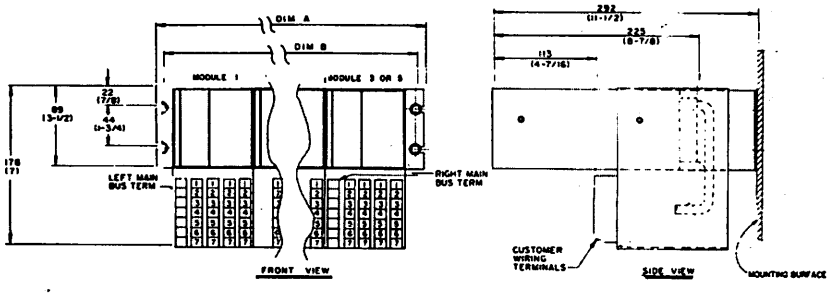

Front Access Wall Mount Logic Chassis

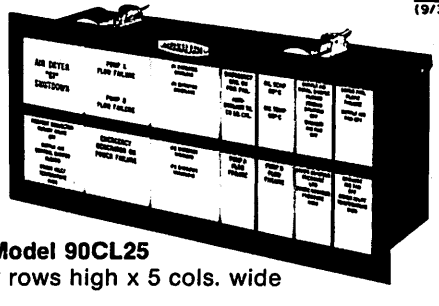

Model 94RC03
Provides 3 modules. 2, 4 or 5 modules wide available as Model 94RC02, 04 or 05.

MODULES WIDE	DIM. 'A'	DIM. 'B'
2	8.50 (216)	7.813 ± .063 (198 ± 2)
3	12.00 (305)	11.313 ± .063 (287 ± 2)

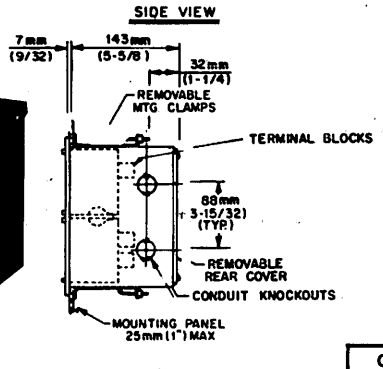

MODULES WIDE	DIM. 'A'	DIM. 'B'
4	15.50 (394)	14.813 ± .063 (376 ± 2)
5	19.00 (483)	18.313 ± .063 (465 ± 2)

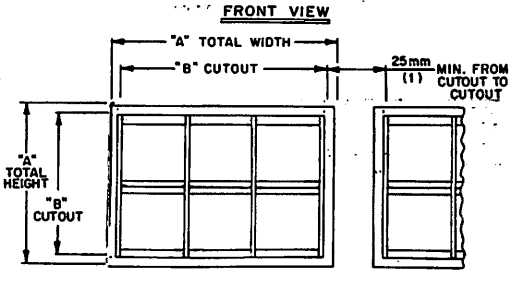

Lamp Cabinets for Indication

Model 90CL25
2 rows high x 5 cols. wide

Model 90CL - For indication from remote logic. Suitable for any number of modules from 1 H x 2 W to 10 H x 10 W. When ordering add suffixes for module rows high and module columns wide, in that order. For example, illustration is Model 90CL25 (2 high x 5 wide).

Terminal blocks are wired from rear. Model 90CLP lamp cabinets provide rear access cable connectors in lieu of wiring terminals. (See Step 4 "To Order REMOTE...", Pg. 43.) Lightboxes with the appropriate window divisions are added to complete the lamp cabinet. (Pages 12 & 13.)

Cabinet Position			
Module Rows High	Module Columns Wide	"A" Dimension	"B" +1/32 -0 Dimension

10	10	920 (36-7/32)	896 (35-9/32)

SERIES90 Lightboxes & Nameplates

Series 90 nameplates are molded of translucent polycarbonate plastic and are available in single, dual, triple, quad, hex and octal configurations. In addition to offering a choice of colored nameplates, colored filters are available for snapping behind white nameplates as an alternate method of color coding.

Lightbox and Nameplate Ordering Explanation:

Annunciator Lightboxes

9 LA

Pullout Bezel Color
Blank field here = Standard black
WH = White RD = Red
YL = Yellow
BL = Blue BR = Brown
Special Bus Option (Omit if not required)
G7 = Optional gold plated bus (card edge contact) finish
G8 = Optional gold flashed bus (card edge contact) finish
Variation Code
01 — Standard
02, 03, etc. = Special
Annunciator Lightbox
Nameplate Configuration
1 = Single 4 = Quad
2 = Dual 6 = Hex
3 = Triple 8 = Octal

Nameplates

3 = Triple 8 = Octal

Lamp Cabinet Lightboxes

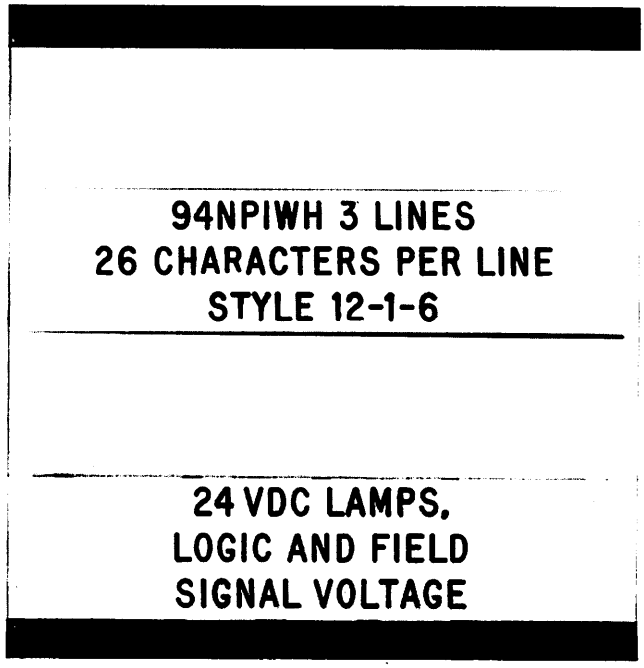

9 LBX

Lamp Test Option (Omit if not required)
T = With lamp test diodes
Lamp Voltage
D0 = No Bulbs D3 = 12 Volt
D2 = 6 Volt D4 = 24 Volt
Variation Code
01 — Standard
02, 03, etc. = Special
Lamp Cabinet Lightbox
Nameplate Configuration
1 = Single 4 = Quad
2 = Dual 6 = Hex
3 = Triple 8 = Octal

Colored lightbox pullout bezels may be used to color code entire module positions. Standard black bezels are shown in the accompanying illustrations.

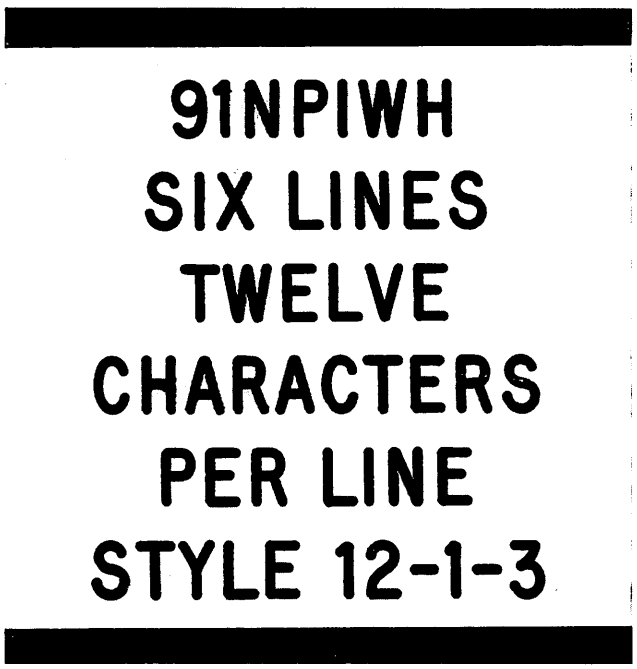

Model 93LA01 or 93LBX01 [6W] (93LBX02 [6W] for use with two color sequences)
Triple (3 nameplates), 24mm x 84mm (15/16" H x 3 5/16" W)***
Character Style No. 12-1-5

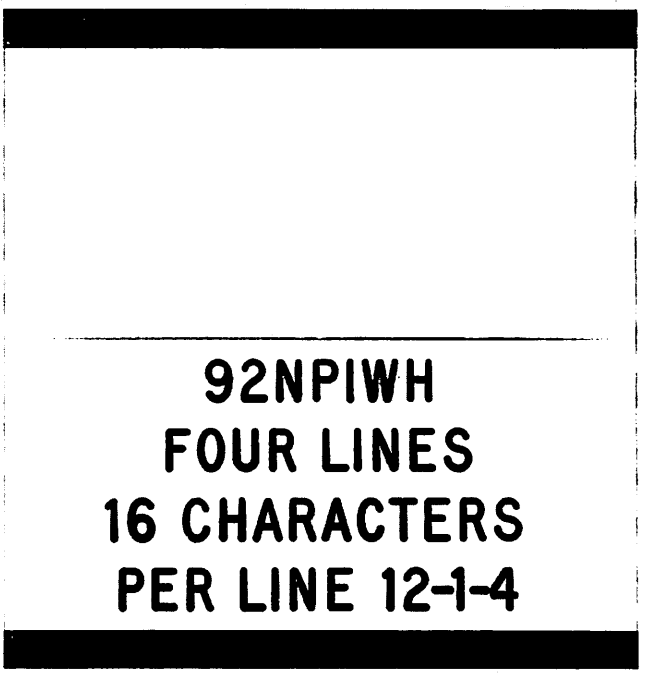

Model 94LA01 or 94LBX01 [8W] (94LBX02 [8W] for use with two color sequences, 94LA03 for use with twinpoint cards)
Quad (4 nameplates), 18mm x 84mm (11/16" H x 3 5/16" W)***
Character Style No. 12-1-6

SERIES90 Lightboxes & Nameplates

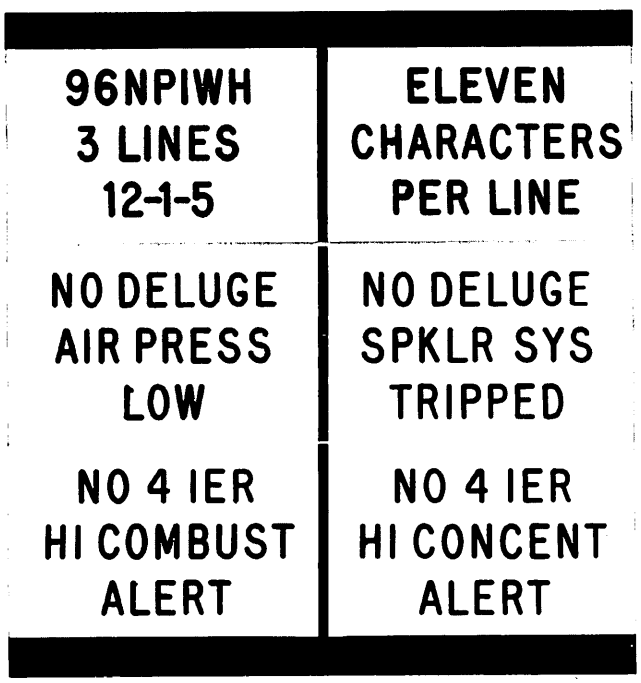

Model 91LA01 or 91LBX01 [4W] (91LA02 or 91LBX02 [4W] for use with two color sequences)
Single (1 nameplate), 76mm x 84mm (3" H x 3 5/16" W)***
Character Style No. 12-1-3

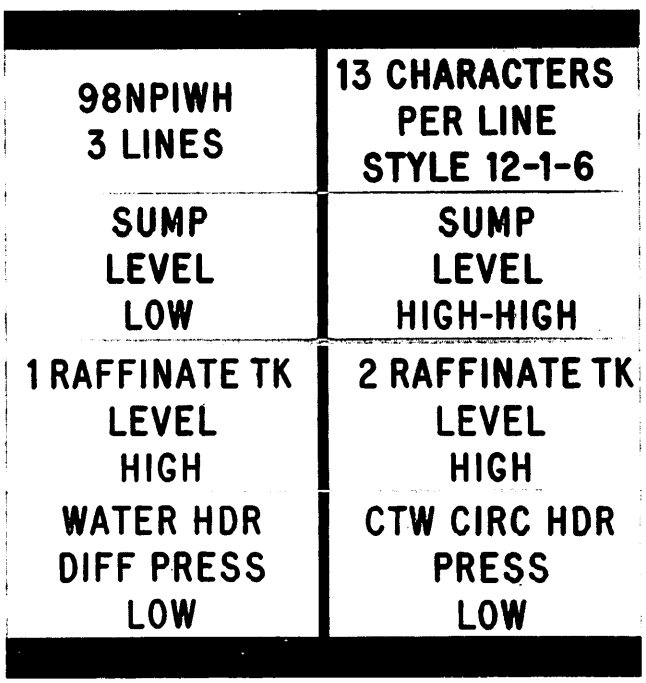

Model 92LA01 or 92LBX01 [4W] (92LA02 or 92LBX02 [4W] for use with two color sequences, 92LA03 for use with twinpoint cards)
Dual (2 nameplates), 37mm x 84mm (1 7/16" H x 3 5/16" W)***
Character Style No. 12-1-4

Lightboxes with Nameplates Shown Actual Size

Model 96LA03 or 96LBX01 [6W]
Hex (3 double nameplates), 24mm x 41mm (15/16" H x 1 5/8" W)*** Character Style No. 12-1-5

Model 98LA03 or 98LBX01 [8W]
Octal (4 double nameplates), 18mm x 41mm (11/16" H x 1 5/8" W)*** Character Style No. 12-1-6

***Nameplates size per **individual window.**

SERIES90 Operational Sequences

Refer to pages 20-23 for additional sequences

Nine standard operational sequences are offered which satisfy the majority of application requirements. Additional sequences and variations are available to satisfy unique requirements. Series 90 offers over 35 sequence variations without modification to the internal chassis wiring and includes but is not limited to ISA Standard Sequences. This means versatility when ordering or even after installation. Consult the PANALARM representative in your area or call us direct if you desire a sequence variation not shown in the catalog.

Note: Test is full functional for all sequences. Lamp test is optional. The 90F1X1PB Flasher is used with all sequences. For systems exceeding 300 points, a slave flasher Model 90F2X must be added to the system for synchronized flashing rates. Dim on normal in lieu of lamp test is a Flasher and Sequence card option. (Specify 1LT on point cards and 1DN on flasher.)

AF (AF1)

I.S.A. SEQUENCE "A" (LOCK-IN) AND "A-4" (NON LOCK-IN)

Basic Flashing	Test or Alert	Acknowledge	Return to Normal
Visual	Flashing	Steady On	Off
Audible	On	Off	Off

1. Non-lock-in Option returns Alert condition to normal without operator Acknowledge if input signal returns to normal.
2. Pushbuttons: (2), Acknowledge and Test.
3. Standard plug-in card for trouble contact input: 91AF1T24DC or 92AF1NL24DC (twinpoint).

FR (AF2)

I.S.A. SEQUENCE "A-1-2"

Basic Flashing, Separate Flasher Reset	Test or Alert	Acknowledge	Flash Reset	Return to Normal
Visual	Flashing	Flashing	Steady On	Off
Audible	On	Off	Off	Off

1. Pushbuttons: (3), Acknowledge, Flash Reset, and Test.
2. Standard plug-in card for trouble contact input: 91AF2T24DC or 92AF2NL24DC (twinpoint).

AM (AF3)

I.S.A. SEQUENCE "M"

Basic Flashing, Manual Reset	Test or Alert	Acknowledge	Return to Normal	Reset to Normal
Visual	Flashing	Steady On	Steady On	Off
Audible	On	Off	Off	Off

1. Pushbuttons: (3), Acknowledge, Reset, and Test.
2. Standard plug-in card for trouble contact input: 91AF3T24DC or 92AF3NL24DC (twinpoint).

FRM (AF4)

I.S.A. SEQUENCE "M-1-2"

Basic Flashing, Separate Flasher Reset and Manual Reset	Test or Alert	Acknowledge	Flash Reset	Return to Normal	Reset to Normal
Visual	Flashing	Flashing	Steady On	Steady On	Off
Audible	On	Off	Off	Off	Off

1. Pushbuttons: (4), Acknowledge, Flash Reset, Reset, and Test.
2. Standard plug-in card for trouble contact input: 91AF4T24DC or 92AF4NL24DC (twinpoint).

ARR (AR1)

I.S.A. SEQUENCE "R"

Basic Flashing With Return Slow Flash and Return Audible	Test or Alert	Acknowledge	Return to Normal	Reset to Normal
Visual	Flashing	Steady On	Slow Flashing	Off
Audible #1	On	Off	Off	Off
Audible #2	Off	Off	On	Off

1. Pushbuttons: (3), Acknowledge, Reset, and Test.
2. Standard plug-in card for trouble contact input: 91AR1T24DC or 92AR1NL24DC (twinpoint).
3. If only one horn is desired for both alert and return to normal, horn output terminals are connected together at flasher card terminal block.

SERIES90 Operational Sequences

I.S.A. SEQUENCE "F3A-3"

TFS
(TF1)
(Patent No. 3,029,421)

Tri-Flash, First Out	Test or First Alert	Subsequent Alert	Acknowledge	First Out Reset	Return to Normal
First Out Visual	Intermittent Fast Flashing	Intermittent Fast Flashing	Slow Flashing	Steady On	Off
Subsequent Visual	Off	Fast Flashing	Steady On	Steady On	Off
Audible	On	On	Off	Off	Off

1. Pushbuttons: (3), Acknowledge, First Reset, and Test.
2. Standard plug-in card for trouble contact input: 91TF1T24DC or 92TF1NL24DC (twinpoint).

I.S.A. SEQUENCE "F3M-3"

TFSM
(TF3)

Tri-Flash, First Out Manual Reset	Test or First Alert	Subsequent Alert	Acknowledge	First Out Reset	Return to Normal	Reset to Normal
First Out Visual	Intermittent Fast Flashing	Intermittent Fast Flashing	Slow Flashing	Steady On	Steady On	Off
Subsequent Visual	Off	Fast Flashing	Steady On	Steady On	Steady On	Off
Audible	On	On	Off	Off	Off	Off

1. Pushbuttons: (4), Acknowledge, First Reset, Reset, and Test.
2. Standard plug-in card for trouble contact input: 91TF3T24DC or 92TF3NL24DC (twinpoint).

VSRR
(VR1)

Two Color First Out With Return Flashing and Audible	Test or First Alert	Subsequent Alert	Acknowledge	Return to Normal	Reset	First Out Reset	Return to Normal
First Visual (Red)	Flashing	Flashing	Steady On	Slow Flashing	Slow Flashing	*	Off
Subsequent Visual (White)	Off	Flashing	Steady On	Slow Flashing	Off	Slow Flashing**	Off
Horn 1	On	On	Off	Off	Off	Off	Off
Horn 2	Off	Off	Off	On	Off	Off	Off

1. Pushbuttons: (4), Acknowledge, First Reset, Reset, and Test.
2. Standard plug-in card for trouble contact input: 91VR1T24DC (twinpoint cards are not available).
   *If first out reset is operated after acknowledge but prior to trouble contact returning to normal, the first out point will revert to the subsequent (white) status.
   **Requires operation of reset pushbutton to reset to normal.

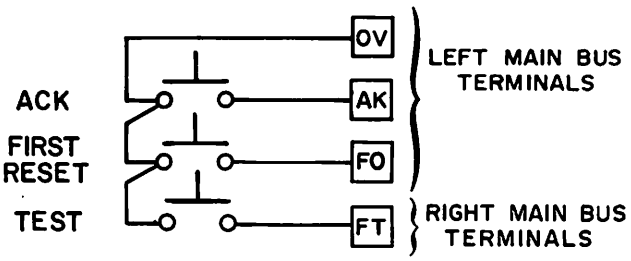

MC
(MC1)

Motor Control	Motor On	Test or Alert	Acknowledge	Manual Stop
Visual	Steady On	Fast Flashing	Slow Flashing	Off
Audible	Off	On	Off	Off

1. If motor is manually stopped at any time during the sequence of operation, the visual and audible will automatically revert to the off condition. (Manual stop)
2. Pushbuttons: (2), Acknowledge and Test.
2. Standard plug-in card for trouble contact input: 91MC1T24DC or 92MC1T24DC (twinpoint).

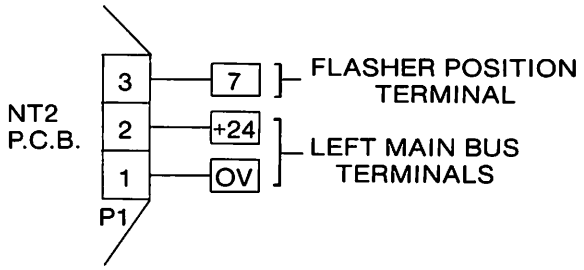

SERIES90 Typical Wiring Diagram Sequence TFS Information

Pushbutton Wiring Details

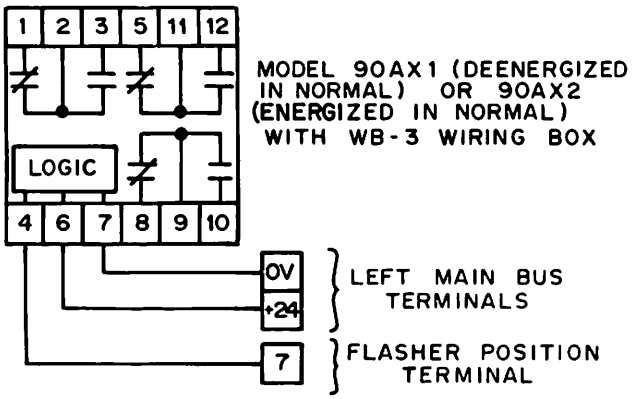

Audible Signal Device Wiring

(1) MODEL NT2—24D NOVATONE HORN
REF DWG. #57100-48

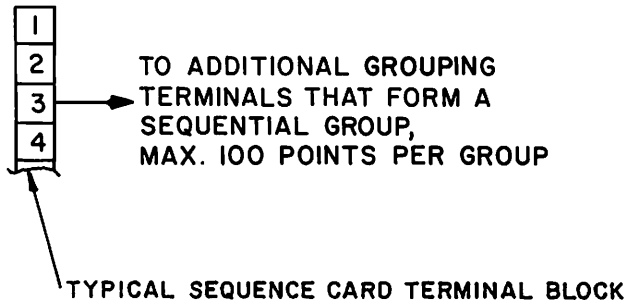

Common Auxiliary Relay Wiring

FOR CUSTOMER USE IF REQUIRED

(3) FORM "C" CONTACTS RATED AT 5 AMPS RESISTIVE AT 28VDC OR 120 VAC & 0.5 AMP AT 125VDC.

Terminal Grouping Diagram

Operational Sequence TFS

Input Status	First Visual	Subsequent Visual	Audible
1st Alarm or Test	Interm. Fast Fl.	Off	On
Subsequent Alarm	Interm. Fast Fl.	Fast Flash	On
Acknowledge	Slow Flash	Steady-On	Off
First Reset	Steady-On	Steady-On	Off
Return to Normal	Off	Off	Off

TYPICAL TERMINAL AND INPUT WIRING DESIGNATIONS

Customer Left Main Bus
One per cabinet or remote chassis, coded White.

- P1 — Option Bus #1 Typically Used for Lamp Test or Dimmer Control Options
- FO — First Out Reset Pushbutton Connection
- AK — Acknowledge Pushbutton Connection
- P2 — Option Bus #2 Typically Used for Special Sequence Pushbutton Connection
- P3 — Option Bus #3 Typically Used as Field Contact Voltage Distribution Bus
- OV — System Common Connection (Connect to OV on power supply)
- +24 — System Logic and Lamp Voltage Connection (Connect to +24 on power supply)

Customer Right Main Bus
One per cabinet or remote chassis, coded White.

- FF — Fast Flash Oscillator Bus
- SF — Slow Flash Oscillator Bus
- FT — Functional Test Pushbutton Connection
- FR — Flasher Reset Pushbutton Connection
- MR — Manual Reset Pushbutton Connection
- SH — Ringback Horn Enable Bus
- FH — Alert Horn Enable Bus

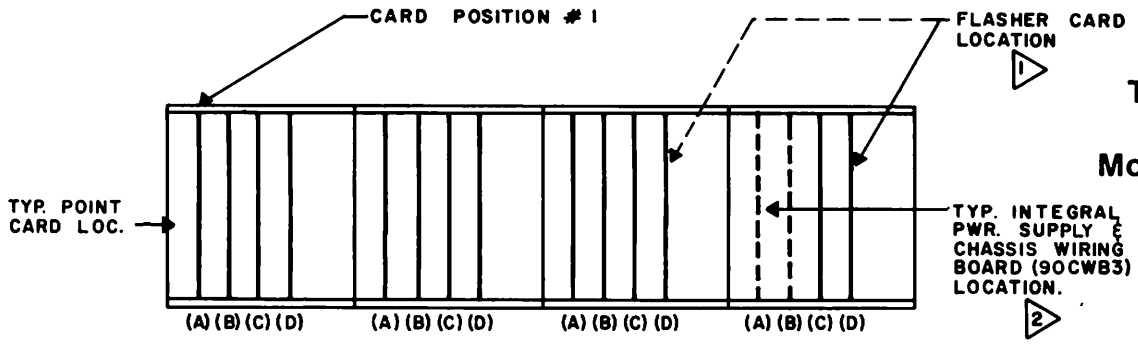

Flasher Location
Coded Red

- 1 — Dimmer Control Output (1DN Option Must Be Specified)
- 2, 3 — Flash Rate Inputs on 90F2X Slave Flasher only. 2 is Fast Flash Rate and 3 is Slow Flash Rate
- 4, 5 — Remote Dimmer Level Control (1DN Option Must Be Specified)
- 6 — Return Audible (NT2-24D) or Common Return Auxiliary Relay (90AX1) Connection
- 7 — Alarm Audible (NT2-24D) or Common Auxiliary Relay (90AX1) Connection

Normally Located In Lower Righthand Module Position (Front viewed)

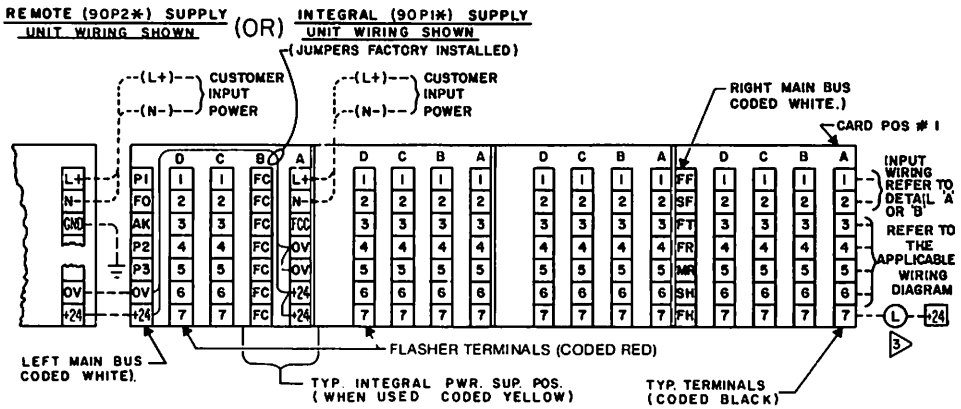

SERIES90

Terminal Arrangement of Model 94 Style Modules (4 Terminal Blocks Per Module) Using 1, 2, 3, OR 4 91 Cards (1 Point Per Card)

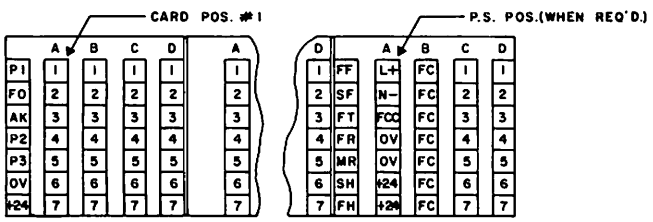

Typical Front View, 1 H x 4 W Module Arrangement

Typical View, Rear Terminal Arrangement

Typical View, Front Access Terminal Arrangement

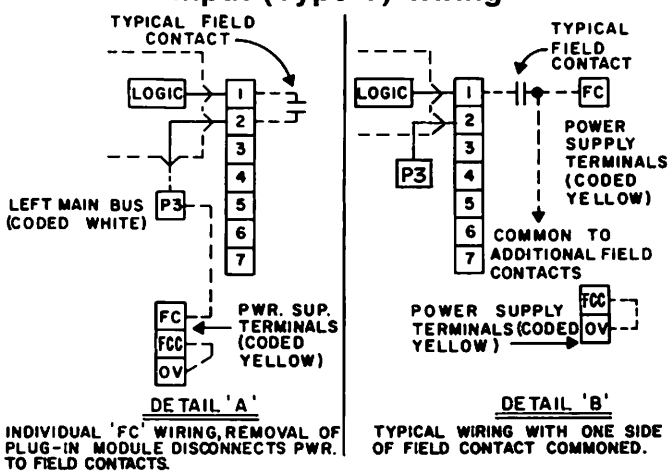

NOTES:

1> Flasher is normally located in the lower right module viewed from front (in systems with integral power supplies flasher is located in the module to the left of the power supply.) Flasher is wired to its module's left side terminal block (D). Capacity is 300 points.

2> Integral power supply & chassis wiring board (when used) is normally located in the lower right module, viewed from front (card position & terminals (C) & (D) are not available).

3> Remote lamp(s). Max load (total of combined integral and remote lamps): 320 mA at 24VDC.

Input (Type T) Wiring

Card Position A, B, C or D
Typical Single Point Sequence Card (Using T Input)

1 — Input Signal
2 — Field Contact Voltage Output (Type T Input Cards)
3 — First Out Grouping (or Special Option Function)
4, 5 — Output Option Wiring
6, 7 — Lamp Output (Remote Logic) or Special Option Function (Integral Logic) Slave Lamp Output (Integral Logic)

Card Position A, B, C or D
Typical Twinpoint Sequence Card (Using NL Input)

1 — Input Signal Point #1 (Upper Nameplate)
2 — Input Signal Point #2 (Lower Nameplate)
3 — First Out Grouping (or Special Option Function)
4, 5 — Output Option Wiring
6 — Lamp Output Point #2 (Remote Logic)
7 — Lamp Output Point #1 (Remote Logic) or Special Option Function (Integral Logic)

Integral Power Supply

Card Position B	Card Position A	
FC	L(+)	Customer's Primary Input Voltage
FC	N(-)	Common Side of Field Contact Voltage (for T or NL Input Type Connect FCC to OV)
FC	FCC	
FC	OV	Logic and Lamp System Common Connects to OV (External Wire) on Left Main Bus
FC	OV	
FC	+24	Logic and Lamp Power Connect to +24 (External Wire) on Left Main Bus
FC	+24	

Field Contact Supply Voltage

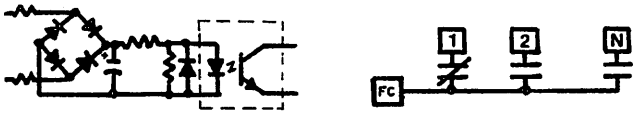

SERIES90 Sequence Card "On Board" Options

The options on these two pages are part of the Series 90 standard systems design and may be added to sequence cards as required. Multiple options are available on one card. All options described are available for both single and twinpoint cards, unless otherwise stated. Options are ordered by adding option code designations to the end of the standard sequence card model number. Check terminal requirements for mul-

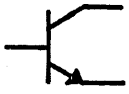

INPUT OPTIONS

Input Signal Configuration—Option Code KN or NL

The standard T input will satisfy dry contact inputs for single point cards. However, other input configurations (KN or NL) are available. KN—optical isolated input for AC or DC, specify voltage in model number. See Specifications Pg. 4 for input voltages available. NL—dry contact input (standard on twinpoint cards), uses a common return wire from field for all points. Substitute KN or NL in sequence card model number.

Transistor Switch Inputs—Option Code *PR or *PC

Transistors may be used as switching inputs to Series 90. It may be necessary to have a pull-up resistor (Ref. Doc. 900320, Application Guide). The pull-up resistor is mounted on sequence card. Specify Resistor Code No. for desired resistance value.

Opto Isolator Input (with FC Interlock)—Option Code KP

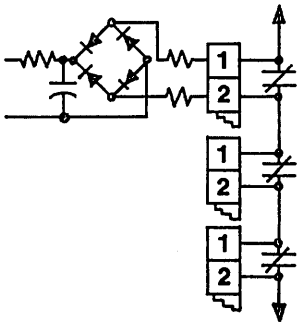

Same as option code KN except by using customer terminals 1 and 2 for signal input and option busses P1 and P2 for isolated power source input, card removal disconnects voltage from the signal wiring.

Signal Wiring Monitor—Option Code TWM

For single point cards only. An open circuit in the signal contact wiring loop will cause the sequence card to alarm. After acknowledge, the lamp display will blink (a 100 ms flash) at two second intervals. An end-of-line resistor (shipped loose with each card) must be field installed across each signal contact.

Series Contact Monitor—Option Code KNA

With this option on a first-out sequence card, up to nine series contacts in a 120 VAC control loop can be monitored. The first contact to open will initiate the first-out alarm.

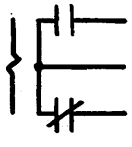

OUTPUT OPTIONS

Auxiliary Output Operation Modes

(For Integral Aux Contacts, Optical Couplers and Electronic Outputs, replace asterisk in option code with the selected mode number.)

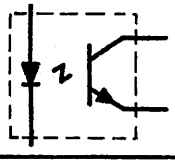

Specify Mode Number	Operation Mode
1	Contact follower, operates on test.
3	Lamp output follower, provides steady signal when lamp is on or flashing, operates on test.
4	Contact follower, *does not* operate on test.
5	Lamp output follower, provides steady signal when lamp is on or flashing, *does not* operate on test.
6	Horn output follower, on only when horn is active.
7	Lamp output follower, follows flashing or on. Operates on test.

Integral Auxilliary Contacts—Option Codes *AE, *BE, or *CE

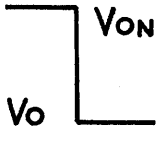

Available for a variety of operating modes. Develop Option Code by selecting mode number (1 or 3 thru 7) from Auxiliary Output Operation Modes Table and letter designation (AE, BE, or CE) for contact configuration: AE—normally open, SPST; BE—normally closed, SPST; CE—single pole double throw. Energized or deenergized in normal is field selectable. (Available on twinpoint cards when used with analog input or option 9A for NL inputs.)

Optical Couplers—Option Codes *KT, *KC, or *KE

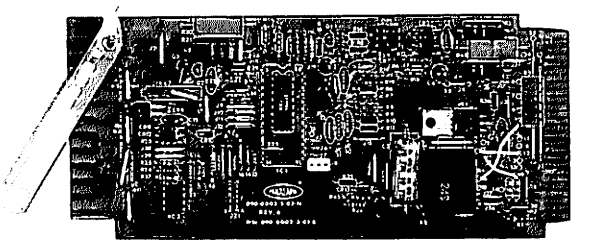

Isolated transistor switch output for connection to customer instrumentation and associated voltage. Transistor rating 30VDC; 10mA max. Saturation Voltage 0.3VDC @ 5mA. Develop Option Code by selecting mode number (1 or 3 thru 7) from Auxiliary Output Operation Modes Table and letter designation (KT, KC, or KE) for optical coupler wiring; KT—Collector and emitter wired out; KC—collector pull-up resistor (2.2K ohm), collector and emitter wired out; KE—collector, emitter, and emitter resistor (2.2K ohm) wired out. Energized or deenergized in normal is field selectable.

Electronic Outputs—Option Codes *EA thru *EH, *EJ thru *EM

Open collector (NPN) output to drive remote auxiliary relay (90AX1 or 90AX2). Transistor rating is 18VDC; 10mA max. Saturation Voltage 2.0VDC @ 10mA. Emitter is connected to system common (OV). May be grouped to achieve common function. Develop Option Code by selecting mode number (1 or 3 thru 7) from Auxiliary Output Operation Modes Table and letter designation for wiring desired.

tiple option usage. Refer to the "SEQUENCE CARD MODULE NUMBER STRUCTURE" section on pages 20-23.

MISCELLANEOUS OPTIONS

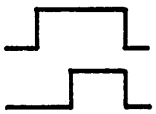

Twinpoint Card FC Interlock—Option Codes TA or TB

With either option, card removal disconnects voltage from field wiring. Option TA requires the use of four customer terminals (two inputs and two FC'S). Option TB requires the use of three customer terminals (two inputs and one FC).

Inputs from Analog Cards—Option Codes DM or DB

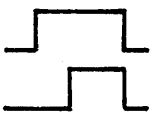

Sequence cards used in conjunction with analog input cards receive their inputs via cross-over links between adjacent sockets (A and B or C and D). Sequence cards must have input option DM12DC for meter set systems or DB12DC for blind set systems.

Fixed Time Delay—Option Code *FTD

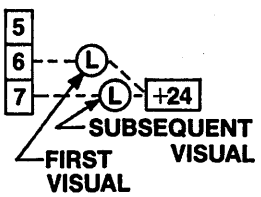

Delays point recognition of alarm after signal input change of state. Choice of time delays. If a time is not specified, standard input response is 20mS.

Adjustable Time Delay—Option Code *ATD

Available single point only. Identical to fixed time delay except adjustable timing spans. Specify Option Code.

Separate Lamp Outputs—Option Code 1VT

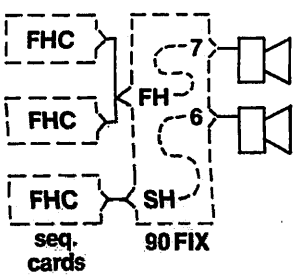

For single point, two color sequences, first out visual, (TB6), subsequent visual (TB7).

Relay Lockout—Option Codes *RL

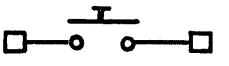

Prevents auxiliary output operation when activated. For use with auxiliary contacts and optical coupler outputs only. Wired out for lockout switch connection.

Individual Alert Horn Enable Outputs—Option Codes *FHC

Allows alert horn enable outputs of sequence cards to be grouped to operate separate horns or output reflash (90RFR*) cards.

Lamp Test—Option Code *LT

Provides lamp test. 1LT can be used in addition to full functional test. Must be used when dim lamps in normal are required. (Option Code 1DN also must be specified for flasher.) 2LT provides lamp test only (no functional test).

Card Removed Status Indicator—Option Codes *CR

Sequence cards can be provided with a tie point which will operate a customer supplied status indicator to advise operator if a sequence card has been removed from the system.

Individual Pushbuttons—Option Codes *PB

This option provides pushbutton connections on customer terminals for individual sequence cards. For example, option code 1PB provides a connection to customer terminal 4 of sequence cards to allow the use of individual or grouped acknowledge pushbuttons.

Polarizing Key—Option Codes *Y

Certain cards may be keyed to allow insertion into only card slots for which they are wired.

No (Lamp "Keep-Alive") Resistor—Option Code 1NR

A standard feature of Series 90 sequence cards is a "keep-alive" resistor which allows a small amount of current through the lamp filaments when a point is not in the alarm condition. This feature increases lamp life by reducing the thermal shock effect. The 1NR option defeats this feature.

Separate First-Out Grouping—Option Code *G

Without this option the inhibit signal from both upper and lower points on a first-out twinpoint card are wired to one customer terminal and therefore must be in the same first-out group. With option *G, the upper point inhibit is wired to one customer terminal and the lower point inhibit to a second customer terminal.

100 ms Power Interruption—Option Code 1M

Available with 120 VAC input and 24 VDC "FC" power supplies, only. 1M must also appear at the end of the power supply model number. (Standard is 16ms.)

Gold Plate—Option Codes *GF

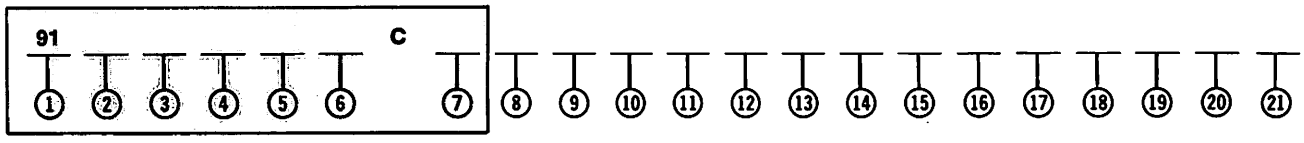

1GF; gold plated connector fingers, "chassis" end of card only. 2GF; gold plated connector fingers, both ends of card.

SERIES90 Single Point Sequence Card Model Number Structure

When configuring a sequence card model number, the only limiting factor with regard to option compatibility (unless otherwise noted) will be the availability of customer terminals (TB1) through (TB7) and/or option busses (P1 bus) through (P3 bus).

Following each option description you will find "(TB*)" and/or "(P*)" if any of these are "used up" by that option.

It is suggested that you list TB1 through TB7 and P1, P2, P3 on a sheet of paper. As you go through the list of options you require, check off the terminals and busses used.

① Series 90 single point sequence card: 91

② Series 90 sequence designation: AF, AR, AS, LN, MC, TF, VA, VR, MP

③ Sequence variation code:
- 1 Basic sequence
- 2 Adds "Flash Reset" ("Ack" silences horn, only) to basic sequence.
- 3 Adds "Manual Reset" to basic sequence.
- 4 Adds "Flash Reset" and "Manual Reset" to basic sequence.
- 5 Non flashing sequence.
- 6 Adds "Return Ack" to ringback sequences.
- 7 Adds "Flash Reset" and "Return Ack" to ringback sequence
- 8 Deletes "First Reset" from first out sequence (automatic reset).
- 10 Same as Code 2 except lamps change from fast flash to slow flash if point returns to normal before flash reset.

AVAILABLE ALPHA/NUMERIC COMBINATIONS

Series 90 Model Number	Panalarm Alpha Sequence Designation	Operational Sequence
AF1	AF	See page 14
AF2	FR	See page 14
AF3	AM	See page 14
AF4	FRM	See page 14
AF5	AO	Same as AF1 except non-flashing
AF10	FRA	Same as AF2 except points returning to normal before flash reset will change from fast flash to slow flash
AR1	AR/ARR	See page 14 (Omit Audible #2 for AR sequence).
AR2	FRR	Adds "Flash Reset" to AR1
AR6	ARRS	Adds "Return Ack" to AR1. Uses (P2 bus)
AR7	FRRS	Adds "Flash Reset" and "Return Ack" to AR1 Uses (P2 bus)
AS1	AS	First out point fast flash, subsequent points steady on (TB3)
AS3	ASM	Adds "Manual Reset" to AS1 (TB3)
LN1	LN	Status indicator (Non flashing, no horn, no ack)
MC1	MC	See page 15
TF1	TFS	See page 15 (TB3)
TF2	TFSFR	Adds "Flash Reset" to TF1 (TB3)
TF3	TFSM	See page 15 (TB3)
TF4	TFSFRM	Adds "Flash Reset" to TF3 (TB3)
VA1	VS	First out flashes red, subsequents flash white. Pushbuttons: "Ack," "First Reset", "Test" (TB3).
VA2	VSFR	Adds 'Flash Reset" to VA1 (TB3)
VA3	VSM	Adds "Reset" to VA1 (TB3)
VA4	VSFRM	Adds "Flash Reset" and "Reset" to VA1 (TB3)
VA5	VO	Non flashing (Same as VA1 except first out steady red) (TB3)
VA8	VSA	Same as VA1 except without "First Reset" (Automatic reset) (TB3)
VR1	VSRR	See page 15 (TB3)
VR2	VSFRR	Adds "Flash Reset" to VR1 (TB3)
VR6	VSRRS	Adds "Return Ack" to VR1 Uses (P2 bus, TB3)
VR7	VSFRRS	Adds "Flash Reset" and "Return Ack" to VR1. Uses (TB3, P2 bus)
MP1		Multiprogrammable: AF1, 2, 3, 4, TF1, 2, 3, 4.
MP2		Multiprogrammable: AF1, 2, 3, 4, TF1, 2.

Model 91MP cards have on-board "DIP-FIX" switches to select one of the above operational sequences, N.O. or N.C. signal input and, for sequence AF, lock-in or non lock-in of momentary alarms.

④ **INPUT TYPE**
- **T** = Contact (standard, with FC voltage interlock) (TB1, TB2, P3 bus)
- **KN** = Opto-isolator (TB1, TB2)
- **KP** = Opto-isolator (with FC voltage interlock) (TB1, TB2, P1 bus, P2 bus)
- **DM** = Direct (for meter set analog 91AD).
- **DB** = Direct (for blind set analog 91AB).
- **DNL** = Accepts input from electronic outputs of other sequence cards.
- **NL** = Contact without FC interlock (TB1)
- **TWM** = Contact with wire monitor (TB1, TB2, P3 bus)
- **KNA** = Opto-isolator, series contact monitor only (TB1, TB2)

⑤ **INPUT VOLTAGE** Available with input types
- **5** = "KN", "KP"
- **12** = "T", "KN", "DM", "DB", "DNL", "NL" & "KP"
- **24** = "T", "KN", "NL", "KP" & "TWM"
- **48** = "T", "KN", "NL" & "KP"
- **125D** = "T", "KN", "NL", "KP" & "TWM"
- **120A** = "KN", "KNA" & "KP"

⑥ **VOLTAGE TYPE** Available with input type:
- **A** = AC voltage, "KN" & "KP", "KNA"
- **D** = DC voltage, "T", "KN", "DM", "DB", "DNL", "NL", "KP" & TWM"

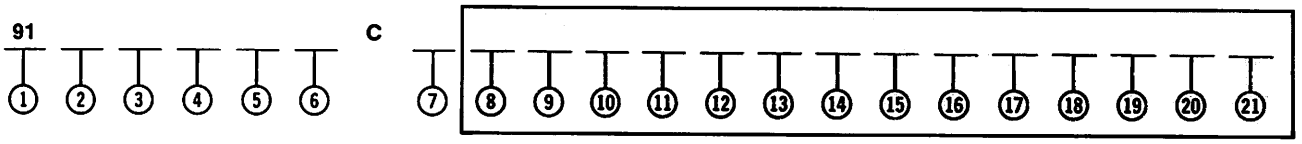

NOTE: The shortest possible model number must contain a minimum of elements ① through ⑥.
Example: 91TF1T24DC
Elements ⑦ through ㉑ are added, as required, in the order listed. Pay particular attention to terminals and busses used.
Example: 91TF1KN24DC4PC4CE4RL

⑦ **INPUT SIGNAL CONFIGURATION**
(Input pull up resistor) Maximum allowable power dissipation for card mounted resistor: 1.75 Watts

1PR = 100 ohm 2PR = 220 ohm 3PR = 470 ohm 4PR = 1K 5PR = 2.2K 6PR = 4.7K 7PR = 6.8K 8PR = 8.2K 9PR = 10K	between (TB1) and (TB2)	1PC = 100 ohm 2PC = 220 ohm 3PC = 470 ohm 4PC = 1K 5PC = 2.2K 6PC = 4.7K 7PC = 6.8K 8PC = 8.2K 9PC = 10K	For "NL" type input on TB1. Resistor between (TB1) and (P3 bus) For "KN" type input on (TB1) and (TB2). Resistor between TB1 and (P3 bus)

SERIES90 Single Point Sequence Card Model Number Structure

Note that cards requiring the use of one of the option busses cannot be mixed with other cards requiring the use of the same option bus for a different option in the same remote chassis or in the same horizontal row in a cabinet.

⑧ TIME DELAY OPTION

ADJUSTABLE TIME DELAY

1ATD = 5 to 50 ms 2ATD = 20 to 500 ms	Delay on alarm, return & test.
3ATD = 0.2 to 5 Sec 4ATD = 2 to 50 Sec 5ATD = 20 to 500 Sec	Alarm delay specified. Delay on return or test approximately 5ms.

FIXED TIME DELAY

1FTD = 1 Sec 2FTD = 2 Sec 3FTD = 5 Sec 4FTD = 10 Sec 5FTD = 20 Sec 6FTD = 50 Sec 7FTD = 100 Sec 8FTD = 200 Sec 9FTD = 500 Sec	Alarm delay specified. Delay on return or test approximately 5ms.
12FTD = 2 ms 13FTD = 5 ms 14FTD = 10 ms * = 20 ms 16FTD = 50 ms 17FTD = 100 ms 18FTD = 200 ms 19FTD = 500 ms	Delay on alarm, return & test.

*If no time delay is specified, sequence card will be standard 20ms ("FTD" option not required).

⑨ NO PREHEAT OF LAMPS
1NR No (Lamp Keep-Alive) Resistor

⑩ POLARIZING KEY OPTION
1Y = Key located in position 1 & 7 (used for seq. cards with "T" or "NL" inputs)
2Y = Key located in position 2 & 6 (used for seq. cards with "KP" or "KN" inputs)
3Y = Key located in position 3 & 5 (used for analog cards "AD" or "AB")
4Y = Key located in position 4 & 5 (used for seq. cards with "DM" or "DB" options)

⑪ DISCONNECT POWER
NOTE: This is not a recommended option.
1DP Card disable "DIP-FIX" switch mounted on card. (Disconnects +24V).
3DP through 7DP Card disable via remote switch connected to TB3 through TB7, respectively.

⑫ LAMP DRIVER SHORT CIRCUIT PROTECTION
1LCP = Shutdown circuit prevents damage from shorted lamp or lamp circuit.

⑬ Auxiliary Output Operation Modes

1 = Contact follower operates with test P.B.
3 = Steady lamp follower operates with test
4 = Contact follower no test.
5 = Steady lamp follower no test
6 = Steady horn follower with test
7 = Follows lamps flashing or steady on

Integral Aux. Contacts

(PLUS)

AE = Form "A" Contact (TB4 & 5)
BE = Form "B" Contact (TB5 & 6)
CE = Form "C" Contact (TB4, 5 & 6)
— Sealed Relay Contact

OR

AE = Form A
BE = Form B
CE = Form C
— Sealed Relay Contact

Optical Couplers

(OR)

KT = Opto-isolator emitter/collector output. (TB4 & 5)
KC = Opto-isolator with collector pull up resistor (TB4, 5 & 6)
KE = Opto-isolator with emitter resistor (TB4, 5 & 6)

Electronic Outputs

(OR)

EA = Electronic Output on (TB4)
EB = Electronic Output on (TB5)
EC = Electronic Output on (TB6)
ED = Electronic output on (TB7)
EJ = Electronic output on (TB3)
EL = Electronic output on internal crossover to adjacent card—used with 90AXC*
EM = Electronic output on (P2 bus) (used w/90RFR2)

⑭ RELAY LOCKOUT OPTION
1RL = (TB6)
2RL = (TB4)
3RL = (TB3)
4RL = (P2 bus)
5RL = (TB7)
10RL = (TB2)

⑮ CARD REMOVED STATUS INDICATION OPTION
1CR = (TB4)
2CR = (TB5)
3CR = (TB6)
4CR = (TB3)
5CR = (TB7)
6CR = (TB6)—Special (multiple cards)

⑯ INDIVIDUAL ALERT HORN ENABLE OUTPUT OPTION
1FHC through 7FHC = output on TB1 through TB7, respectively.

⑰ INDIVIDUAL PUSHBUTTON FUNCTION
1PB = Ack wired out to customer terminal (TB4)
3PB = Ack wired out to customer terminal (TB4)
Rst wired out to customer terminal (TB6)
8PB = Ack wired out to (TB4), test wired out to (TB5).
Other combinations are available.

⑱ SEPARATE LAMP OUTPUTS (1GP, Only, because available with VA* or VR* Sequence only)
1VT = First lamp (TB6), subsequent lamp (TB7)

⑲ LAMP TEST OPTION (1GP, Only)
1LT = Lamp test in addition to functional test (P1 bus) (1GP, only)
2LT = Lamp test instead of functional test (FT bus) (1GP, only)
3LT = Lamp test instead of functional test (P1 bus) (1GP, only)
4LT = Sequence card will not respond to test function
NOTE: When lamp dim in normal is required use 1LT option on point card and 1DN option on flasher.

⑳ GOLD PLATE/GOLD FLASH OPTION
1GF = Gold plated connector fingers
2GF = Gold plated connector & lightbox connector fingers
3GF = Gold flashed connector fingers
4GF = Gold flashed connector & lightbox connector fingers

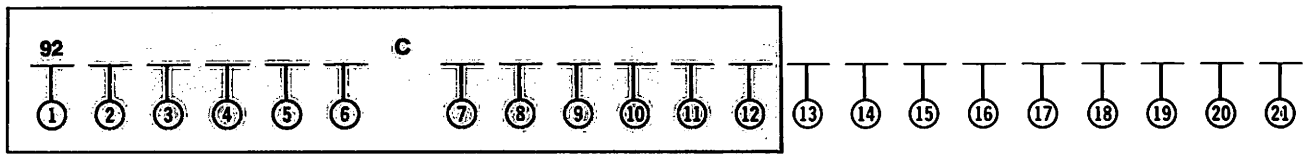

㉑ EXTENDED POWER INTERRUPT OPTION
IM = 100mS power interruption for AC input with 24VDC for 'FC' signals only.

SERIES90 Twinpoint Sequence Card Model Number Structure

When configuring a sequence card model number, the only limiting factor with regard to option compatibility (unless otherwise noted) will be the availability of customer terminals (TB1) through (TB7) and/or option busses (P1 bus) through (P3 bus).

Following each option description you will find "(TB*)" and/or "(P*)" if any of these are "used up" by that option.

It is suggested that you list TB1 through TB7 and P1, P2, P3 on a sheet of paper. As you go through the list of options you require, check off the terminals and busses used.

(1) Series 90 twinpoint sequence card: 92

(2) Series 90 sequence designation: AF, AR, AS, LN, MC, TF, LN/AF

(3) Sequence variation code:
- 1 Basic sequence
- 2 Adds "Flash Reset" ("Ack" silences horn, only) to basic sequence.
- 3 Adds "Manual Reset" to basic sequence.
- 4 Adds "Flash Reset" and "Manual Reset" to basic sequence.
- 5 Non flashing sequence.
- 6 Adds "Return Ack" to ringback sequence.
- 7 Adds "Flash Reset" and "Return Ack" to ringback sequence

AVAILABLE ALPHA/NUMERIC COMBINATIONS

Series 90 Model Number	Panalarm Alpha Sequence Designation	Operational Sequence
AF1	AF	See page 14
AF2	FR	See page 14
AF3	AM	See page 14
AF4	FRM	See page 14
AF5	AO	Same as AF1 except non-flashing
AR1	AR/ARR	See page 14 (Omit Audible #2 for AR sequence).
AR2	FRR	Adds "Flash Reset" to AR1
AR6	ARRS	Adds "Return Ack" to AR1. Uses (P2 bus)
AR7	FRRS	Adds "Flash Reset" and "Return Ack" to AR1 Uses (P2 bus)
AS3	ASM	First out point fast flash, subsequent points steady on, manual reset. Uses (TB3)
LN1	LN	Status indicator (Non flashing, no horn, no ack)
LN1/AF1	LN/AF	Upper point LN1, lower point AF1
MC1	MC	See page 15
TF1	TFS	See page 15. Uses (TB3)
TF2	TFSFR	Adds "Flash Reset" to TF1. (TB3)
TF3	TFSM	See page 15. Uses (TB3)
TF4	TFSFRM	Adds "Flash Reset" to TF3. (TB3)

(4) **INPUT TYPE**
- **KN** = Opto-isolator (TB1, TB2, TB4, TB5)
- **DM** = Direct (for meter set analog).
- **DB** = Direct (for blind set analog).
- **DNL** = Accepts input from electronic outputs of other sequence cards.
- **NL** = Contact without FC interlock (Standard) (TB1, TB2)
- **TA** = Contact with FC interlock. Inputs (TB1, TB2), FC's (TB3, TB4) via (P3 bus)
- **TB** = Contact with FC interlock. Inputs (TB1, TB2), FC (TB4) via (P3 bus)

(5) **INPUT VOLTAGE** Available with input types:
- **5** = "KN", "KNP"
- **12** = "KN", "KNP", "DM", "DB", "DNL", "NL", "TA" & "TB"
- **24** = "KN", "KNP", "NL", "TA" & "TB"
- **48** = "KN", "KNP", "NL", "TA" & "TB"
- **125D** = "KN", "KNP", "NL", "TA" & "TB"
- **120A** = "KN", "KNP"

(6) **VOLTAGE TYPE**
- **A** = AC voltage available with input type "KN", "KNP"
- **D** = DC voltage available with input type "KN", "KNP", "DM", "DB", "DNL", "NL", "TA" & TB"

(7) **INPUT SIGNAL CONFIGURATION**
(Input pull up resistor) Maximum allowable power dissipation for card mounted resistor: 0.5 Watts

- **4PC or 4PR** = 1K
- **5PC or 5PR** = 2.2K
- **6PC or 6PR** = 4.7K
- **7PC or 7PR** = 6.8K
- **8PC or 8PR** = 8.2K
- **9PC or 9PR** = 10K

For "PC" type inputs, resistors between (TB1) and (P3 bus) and between (TB2) and P3 Bus. For "PR" type inputs, upper point (TB1) with resistor between TB1 and TB4, lower point (TB2) with resistor between TB2 and TB5.

(8) **TIME DELAY OPTION**
FIXED TIME DELAY

1 FTD	=	1 Sec	Delay on alarm, return & test
2 FTD	=	2 Sec	
3 FTD	=	5 Sec	
12 FTD	=	2 ms	
13 FTD	=	5 ms	
14 FTD	=	10 ms	
*	=	20 ms	
16 FTD	=	50 ms	
17 FTD	=	100 ms	
18 FTD	=	200 ms	
19 FTD	=	500 ms	

*If no time delay is specified, sequence card will be standard 20ms ("FTD" option not required).

(9) **NO PREHEAT OF LAMPS**
1NR = No (lamp keep-alive) resistor

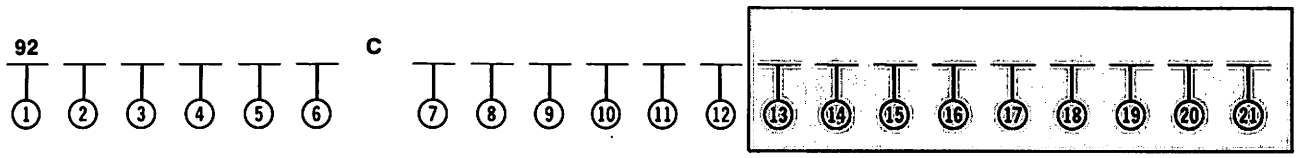

(10) **POLARIZING KEY OPTION**
- **1Y** = Key located in position 1 & 7 (used for seq. cards with "T" or "NL" inputs)
- **2Y** = Key located in position 2 & 6 (used for seq. cards with "KN" or "KP" inputs)
- **3Y** = Key located in position 3 & 5 (used for analog cards "AD" or "AB")
- **4Y** = Key located in position 4 & 5 (used for seq. cards with "DB" or "DM" options)

(11) **DISCONNECT POWER**
NOTE: This is not a recommended option.
- **1DP** = Card disable "DIP-FIX" switch mounted on card. (Disconnects +24V).
- **2DP through 7DP** = Card disable via remote switch connected to TB2 through TB7, respectively.

(12) **SEPARATE FIRST-OUT GROUPING TERMINAL OPTION**
- **XXG** First digit, upper point grouping terminal number. Second digit, lower point grouping terminal number.

SERIES90 Twinpoint Sequence Card Model Number Structure

Note that cards requiring the use of one of the option busses cannot be mixed with other cards requiring the use of the same option bus for a different option in the same remote chassis or in the same horizontal row in a cabinet.

⑬ Auxiliary Output Operation Modes

1 = Contact follower operates with test P.B.
3 = Steady lamp follower operates with test
4 = Contact follower no test.
5 = Steady lamp follower no test
9 = Contact follower no test

Integral Aux. Contacts

(PLUS)

AE = Form A, BE = Form B, CE = Form C — Sealed Relay Contact

Optical Couplers

(OR)

KT = Opti-isolator emitter/collector output.

Electronic Outputs

(OR)

EE = Electronic Output (TB1 & 4)
EF = Electronic Output (TB2 & 5)
EG = Electronic Output (TB6 & 7)
EH = Electronic output (TB4 & 5)
EK = Electronic output on internal crossover to adjacent card—used with 90AXC*

1 Available on cards with "DM" or "DB" inputs only.

2 Same as option *4* except available on cards with "NL", "DM" or "DB" inputs. Form "A" or "B" cont., only. Uses (TB4 through TB7).

3 Form "AE" and form "BE" contacts use customer terminals (TB1, TB2, TB4, TB5).
Form "CE" contacts use customer terminals (TB1 through TB6).

4 "KT" uses customer terminals (TB1, TB2, TB4, TB5).

NOTE: The shortest possible model number must contain a minimum of elements ① through ⑥.
Example: 92TF1NL24DC
Elements ⑦ through ㉑ are added, as required, in the order listed. Pay particular attention to terminals and busses used.
Example: 92AF1KN24DC6PC3FTD4EG

⑭ RELAY LOCKOUT OPTION
3RL = (TB3)
4RL = (P2 bus)
5RL = (TB7)
6RL = (P1 bus)

⑮ CARD REMOVED STATUS INDICATION OPTION
1CR = (TB4)
2CR = (TB5)
3CR = (TB6)
4CR = (TB3)
5CR = (TB7)

⑯ INDIVIDUAL ALERT HORN ENABLE OUTPUT OPTION
1FHC = (TB1)
2FHC = (TB2)
3FHC = (TB3)
4FHC = (TB4)
5FHC = (TB5)
6FHC = (TB6)
7FHC = (TB7)
Both upper and lower point output on same terminal.

⑰ INDIVIDUAL ALERT HORN DISABLE OPTION
1HDU = Upper point
1HDL = Lower point

⑱ ISOLATED PUSHBUTTON FUNCTIONS
1PB = Ack (both points) wired out to customer terminal (TB4)
2PB = Ack (both points) wired out to customer terminal (TB4)
Test (both points) wired out to customer terminal (TB5).

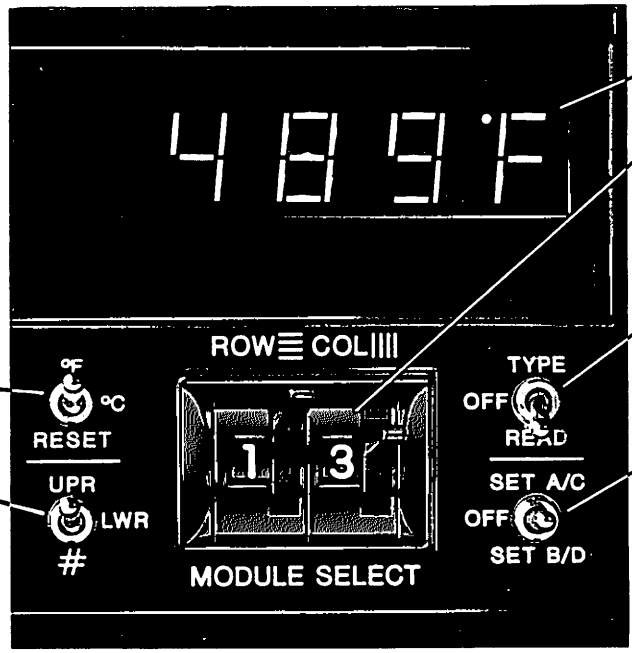

⑲ LAMP TEST OPTION (1GP, Only)
1LT = Lamp test in addition to functional test uses (P1 bus)
2LT = Lamp test instead of functional test uses (FT bus)

⑳ GOLD PLATE/GOLD FLASH OPTION
1GF = Gold plated connector fingers
2GF = Gold plated connector & lightbox connector fingers
3GF = Gold flashed connector fingers
4GF = Gold flashed connector & lightbox connector fingers

㉑ EXTENDED POWER INTERRUPT OPTION
IM = 100mS power interruption for AC input with 24VDC for 'FC' signals only.

DIGITAL DISPLAY For Meter Set Analog (Code AD)

MODEL 90FD*
(Front Display Configuration)

Digital display

Window position (module) select leverwheel switches, rows (high) and columns (wide)

Transducer type (indiciation); center off; and read (display indication)

A or C setpoint switch; (center off); and B or D setpoint (dual setpoint monitor used with upper/lower/# select switch)

Degrees F/C select and reset switch

Upper/lower/# select switch (for two analog inputs in one module position) # position*

* Momentarily depressing switch to # will cause display to alternate between numerical readout and the word "tYPE" (TYPE), "FLd" (READ) "SEt A" (SET A/C) or "SEt b" (SET B/D) depending on function selected.

General Features

The Series 90 digital display is a microprocessor-based readout unit that accepts data from microprocessor based analog input cards. The data for each analog input card can be read out on the five digit display upon address of that particular analog input point. The information displayed includes:

1. Signal input value (°C or °F or customer specified scale symbol for engineering units).
2. Setpoint values.
3. Status of each setpoint's trip direction (High, Low, High-High, High-Low, Low-Low).
4. Point status (alarm or normal) at time of reading.
5. Signal input offset compensation (for RTD's—3rd leg resistance; for thermocouples—cold junction temperature).
6. Diagnostic error signals for the display and system data communication network.
7. Type of transducer being monitored by each analog input point (curve correction used).
8. Self-test display function check and point reset.

The 90FD1 (illustrated above) display controls are all front access hand-addressed switches.

The 90FD5 frontal appearance is the same as the 90FD1 except the lower half is blank. Display control is by means of a remote 12 button touch pad keyboard. Display functions are selected by pressing one key or combinations of 2 or 3 keys. The keyboard is connected to the front display unit via a 7 conductor cable. When properly mounted on a NEMA 4 or 12 panel or enclosure, the keyboard is suitable for NEMA 4 or 12 applications.

The Series 90 digital display may also be mounted remote from the annunciator monitoring system cabinet for those applications where it is desirable to have operator controls in a desk top console.

The Series 90 digital display is capable of reading out information for a maximum of 200 inputs configured in a Series 90 integral enclosure or remote chassis arrangement.

Input Monitoring Capacity

For monitoring up to 100 inputs in a system configured in any size matrix up to, and including, 10 rows high by 5 columns wide, the digital display will occupy any one cabinet module position. (See Figs. A and B.)

For monitoring more than 100 points (200 maximum) or for system matrix arrangements exceeding five columns wide (10 maximum), the digital display will occupy any one cabinet module position, **plus two card slots in one adjacent module position.** (See Figs. C and D.)

Any one of the five locations may be used, e.g. if the digital display is to be located in the bottom row, the option positions available would be numbers 1, 2, or 3. If the digital display is located in bottom row, far right hand position, the option module position number 3 must be used to accommodate the additional two cards.

Fig. A — 100 Point System Card Arrangement
(90FD Front Display Removed)

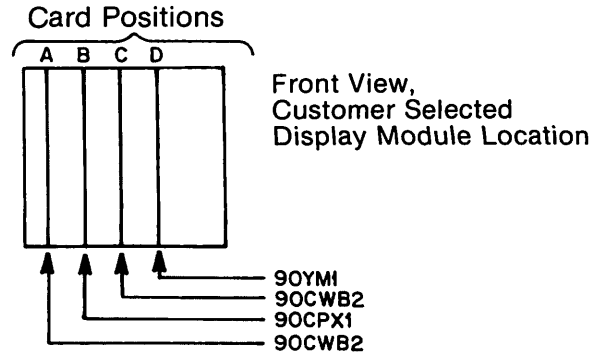

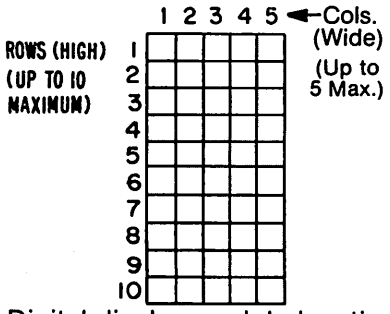

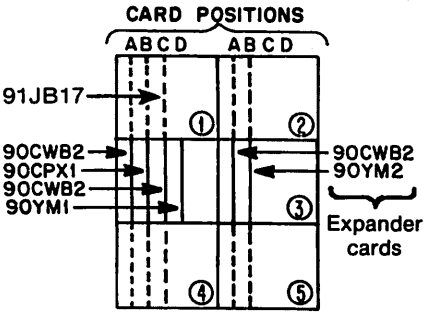

Fig. B — 100 Point System Display Module Location

Digital display module location is open to any position within an integral annunciator. All B and D module card positions will accommodate meter set analog cards (98 max.).

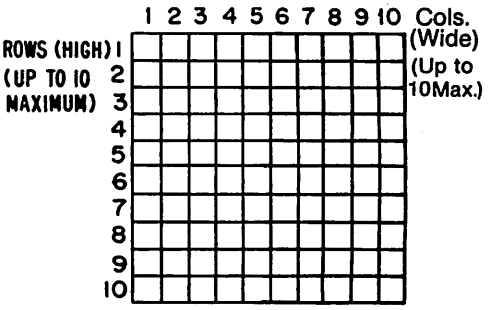

Fig. C — 200 Point System Card Arrangement

(90 FD Front Display Removed)

Front view, display module location. Expander cards may be located in any one module, 1 thru 5 only. 90FD5 (only) requires a 91JB17 in module 1 or 4.

Fig. D — 200 Point System Display Module Location

Digital display module location is open to any position within an integral annunciator. Display and expander modules must be adjacent. All B and D module card positions will accommodate meter set analog cards (197 max.).

Input & Readout Information

MODEL NUMBER DESIGNATION	TRANSDUCER TYPE	INPUT TYPE	SCALE DISPLAYED	ALTERNATE SCALE DISPLAYED	TYPE CODE DISPLAYED

*Models AXD1 or AXD2 are used for current monitoring of active instrumentation signals.

Digital Display Error Codes

The Series 90 meter set analog monitoring system provides diagnostic indication of operational malfunctions on its digital display screen. This helpful and accurate identification of errors in the system data communication network speeds the correction procedure.

Code **Error**

Err 1 — 91AD analog card does not respond or no analog card located in the module position selected. (See Fig. E.)

Err 2 — Data bus (P3) shorted.

Err 3 — Information transfer timing, between 91AD analog card and the digital display, is incorrect.

Err 4 — Noise on the P3 data line.

Err Pt — Appears during a normal power up or when a 91AD analog card is inserted into its module.

Err SF — Open or shorted sensor or sensor wire, sensor failure.

Err AO — 91AD analog card is unable to self-calibrate.

Err HI — Sensor reading is up to 10% over range. (See Fig. F.)

Err LO — Sensor reading is up to 5% under range. (See Fig. G.)

Err 11 — The digital display has controls set in an undefined combination or the digital display has a circuit failure. (See Fig. H.)

Err 15, Err 16 — Internal program error.

Clr Pt — Reset program operation.

91AD*R3	-60 to 180°C	150 ohm, 5% 1/4W, P/N 631411/1
91AD*R4	-60 to 180°C	150 ohm, 5% 1/4W, P/N 631411/1

Thermistor Input

① MODEL NO.	RANGE	FACTORY INSTALLED RESISTOR
91AD•TM•	ALL	2.2K ohm, 5%, 1/4W, P/N 631029/1

PROGRAMMING JUMPER LOCATION		
MODEL NUMBER	ON	OFF
91AD•TM1	J33, J34	J32
91AD•TM2	J32, J34	J33
91AD•TM3	J34	J32, J33
91AD•TM4	J32, J33	J34
91AD•TM5	J33	J32, J34
91AD•TM6	J32	J33, J34
91AD•TM7		J32, J33, J34

Passive (2-Wire) Transducer Input (mA)

① MODEL NO.	RANGE	FACTORY INSTALLED RESISTOR
91AD•PXD1	0.4 to 2.0mA	47K ohm, 5%, 1/4W, P/N 630064/1
91AD•PXD2	1 to 5mA	10K ohm, 5%, 1/4W, P/N 630469/1
91AD•PXD3	4 to 20mA	2.2K ohm, 5%, 1/4W, P/N 631029/1

Notes:

① The resistors and jumpers shown are factory installed to prevent sensor failure indication on unassigned positions. **Remove** resistors and jumpers only when position is assigned.

② Resistor shown is located on 90ATB• and must **remain in place** when position is assigned.

③ Equivalent °F ranges are switch selectable on digital display.

SERIES90 Meter Set (Code AD)
Analog Output Capability

Series 90 meter set analog monitoring systems are capable of providing linearized 1 - 5V or 4 - 20mA isolated output signals. Such signals will encompass the range of the input type selected or can be calibrated to respond only to a segment of the total range (as small as 20% of the monitored range, Option 1GA).

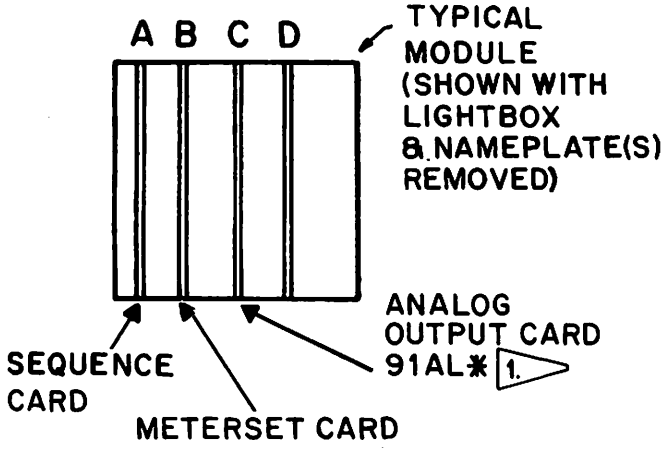

Model 91AL* analog output cards receive a data signal from the Model 91AD* analog input card corresponding to the field signal monitored.

Integral mounting of the Model 91AL* analog output card is illustrated below. Remote mounting also is available for high density window configurations.

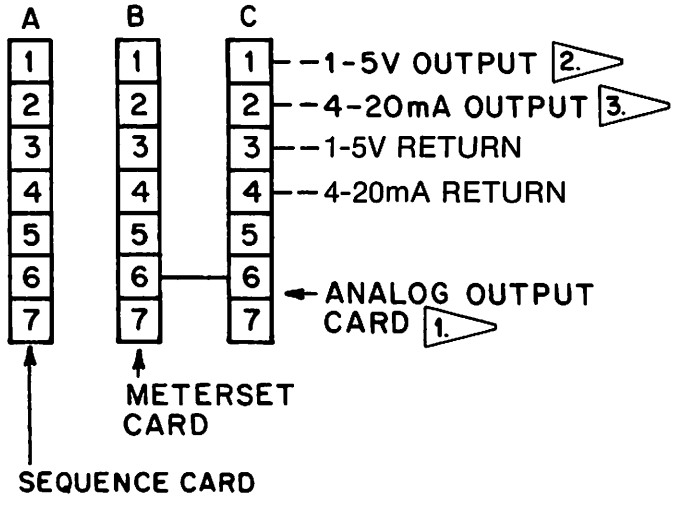

For analog output accuracy, see Pg. 5

Analog Output Card No.	Output Signal
Model 91AL1	4 to 20mA
Model 91AL2	1 to 5V
Model 91AL3	4 to 20mA and 1 to 5V

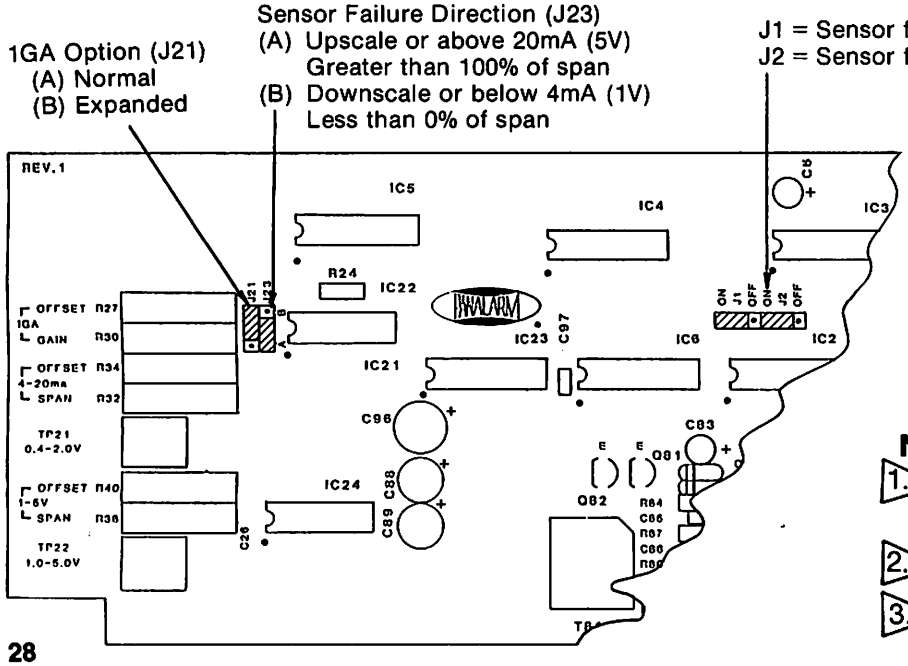

Typical Card Arrangement with Standard Module

Typical Wiring Diagram

Analog Output Card Calibration Pot and Jumper Location

Notes:

1. Model 91AL* analog output cards can be mounted in any module in the system.
2. Models 91AL2 or 91AL3.
3. Models 91AL1 or 91AL3.

TM5		2252 ohm @ 25°C	-10 to 115°C
TM6		3000 ohm @ 25°C	0 to 125°C
TM7		5000 ohm @ 25°C	10 to 150°C

NOTES

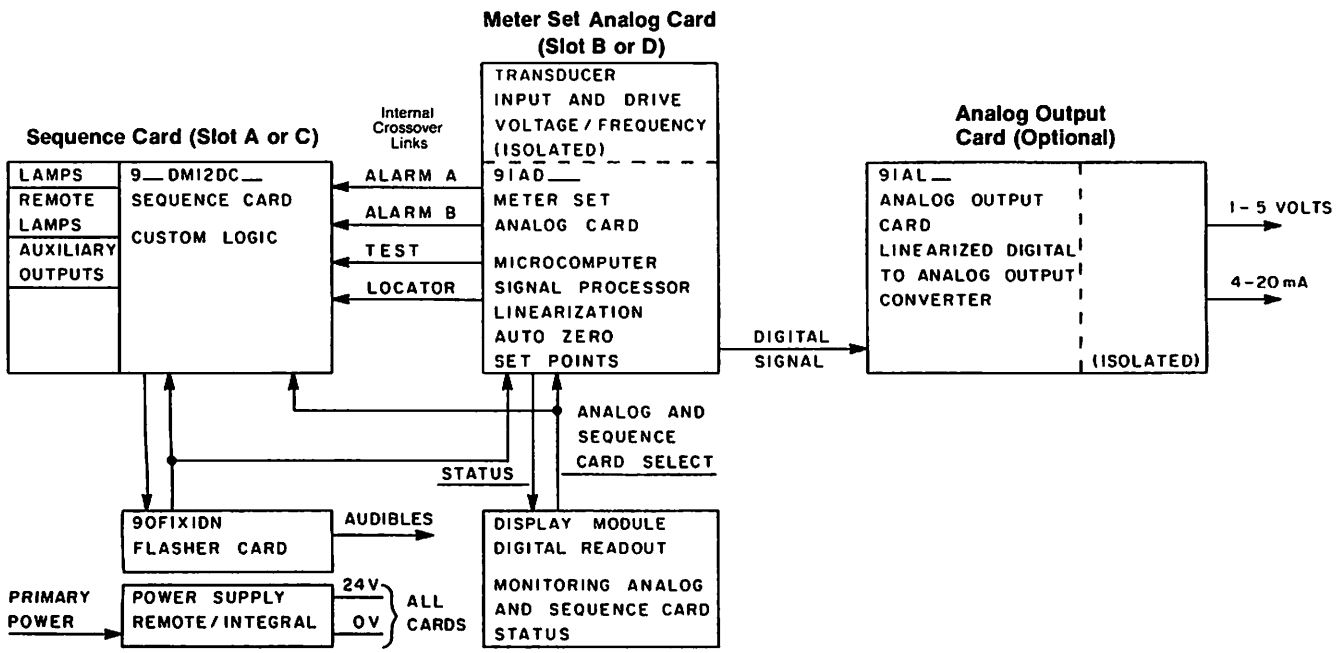

1 Cards or options requiring the use of the (P1), (P2) or (P3) option busses cannot be used in the same horizontal chassis row with meter set analog cards.

② Defined on AXD*, PXD* and LC* only.

③ Temperature scales are listed in °C. Equivalent °F may also be displayed (switch selectable).

④ For monitoring multiple (3 or 4) set points from one transducer, the first dual-set card (setpoints 1 and 2) should have transducer excitation. The second (setpoints 3 and 4) should have "1NE" option. (LC*, R* and TM* only).

NOTES

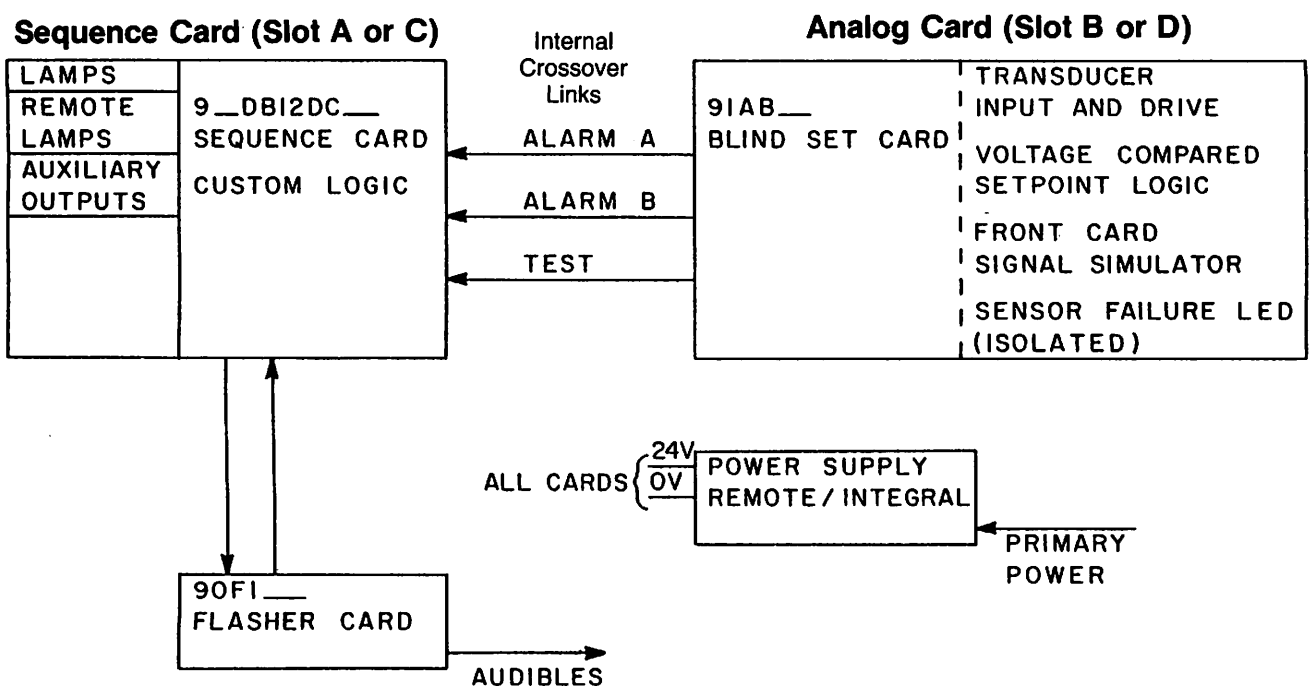

1 Deadband options are jumper selectable on board. 0.5%, 2%, 5% and 10%. Standard is 1%.

② For monitoring multiple (3 or 4) set points from one transducer, the first dual-set card (setpoints 1 and 2) should have transducer excitation. The second (setpoints 3 and 4) should have "1NE" option. (LC*, R*, RR* and TM* only).

③ Operational range shown for reference only. To convert to degrees fahrenheit use the following formula (°C x 1.8) + 32 = °F

Typical System Function Block Diagram

Blind Set Analog Systems (Code AB)

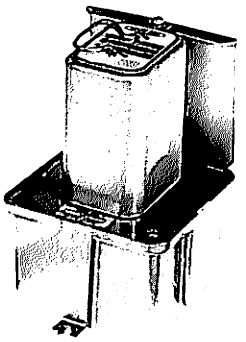

SERIES90 Remote Options

Auxiliary Relay— Model 90AX1

Power Failure Monitor— Model 90AX2

Remote mounted auxiliary relay for horn output, common contacts on alarm and for grouping electronic outputs. Provides three Form C outputs. Add suffix 1 to 90AX for de-energized in normal; 2 for energized in normal; also used for power failure monitor.

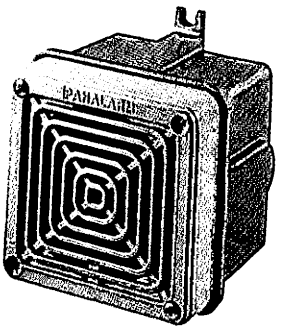

Audibles

MODEL NT2-24D

Novatone horn, 16 field selectable tones. Aux. relay not required.

MODEL HSA/HSD

HSA, 120/50-60Hz. HSD, 125V DC. Both require Model 90AX* auxiliary relay.

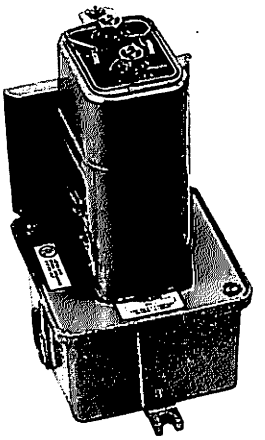

Field Wiring Ground Monitor

Monitors FC (+) and FCC (-) wiring of isolated signal voltage source. Source may be either Series 90 power supply (FCC not jumpered to 0V) or a separate power source.

If Series 90 power supply FCC is jumpered to 0V, the 50-DCF3 will monitor FC, FCC, +24 and 0V.

The 50-DCF3 has two top mounted potentiometers, one for adjusting (+) and one for adjusting (-) sensitivity up to 1.5 megohms.

For minimum allowable leakage resistance, see "Sequence Card Signal Input" section on page 4.

MODEL 50DCF3-*

Pushbuttons

Remote pushbuttons can be used in lieu of or in addition to integral pushbuttons.

The SW-102 has 1 N.O. and 1 N.C. momentary contact. Other versions in the SW-* line are available as well as different construction, e.g. mercury bottle, fiber optic, etc.

MODEL SW102

Accessory Items Required For And Included With Systems Using Meter Set (91AD*) Or Blind Set (91AB*) Analog Cards

Model 90ATB* Auxiliary Terminal Boards

These units contain various components (resistors, diodes, transistors) as required to accomplish cold junction compensation or current to voltage conversion as indicated in the following chart. The units will be factory mounted on customer terminals (normally TB1 and TB2).

Model No.	Used With Meterset Model	Used With Blindset Model
90ATB1	91AD*TC* (COLD JUNCTION COMP)	
90ATB2		91AB*TC* (COLD JUNCTION COMP)
90ATB3	91AD*AXD1 (10-50 mA)	
90ATB4	91AD*AXD1 (4-20 mA)	
90ATB5	91AD*AXD1 (1-5 mA)	
90ATB6	91AD*AXD2 (0-4 mA)	91AB*AXD1 (1-5 mA)
90ATB7	91AD*AXD1 (0.4-2 mA)	
90ATB8	91AD*AXD2 (0-1 mA)	
90ATB9		91AB*AXD1 (4-20 mA)
90ATB10		91AB*AXD1 (0.4-2 mA)
90ATB11		91AB*AXD1 (10-50 mA)
90ATB12	91AD*AXD2 (0-100μA)	

Model 90TP2 Test Probes

Analog input cards have subminiature board mounted calibration jacks accessible through the card handle. These test probes have mating plugs and leads for connection of customer's meter during field calibration procedures.

SERIES90 Miscellaneous Integral Auxiliary And "System Common" Items

AUX OUTPUT CARDS

Model 90AXC*. Each card occupies one position (card slot).

90AXC1 Single electronic or FH or SH input. Single form C relay contact output.

90AXC2X2A Dual electronic or FH or SH inputs. Dual form A (N.O.) relay contact outputs.

90AXC2X2B Dual electronic or FH or SH inputs. Dual form B (N.C.) relay contact outputs.

90AXC3 Dual electronic inputs via crossover links from an adjacent twinpoint card. Dual form C relay contact outputs.

90AXC3X1J Same as above except inputs jumpered together to operate from single point card.

90AXC4 Dual electronic or FH or SH inputs. Dual opto-isolator outputs.

90AXC5X2KC Dual electronic input via crossover links from an adjacent twin point card. Dual opto isolator/collector pullup resistor outputs.

90AXC5X2KC1J Same as above except inputs jumpered together to operate from single point card.

90AXC5X2KE Dual electronic inputs via crossover links from an adjacent twin point card. Dual opto isolator/emitter pullup resistor outputs.

90AXC5X2KE1J Same as above except inputs jumpered together to operate from an adjacent single point card.

90AXC6 One electronic or FH or SH input with mechanical relay form C contact output *AND* one input from sequence card lamp output with solid state relay output (opto-isolated triac).

90AXC7 Dual inputs from sequence card lamp outputs with dual contact outputs for operating repeater lamps.

90AXC8 Single electronic or FH or SH input. Two form C relay contact outputs.

CHASSIS WIRING BOARDS

Model 90CWB*. These (except 90CWB6) are very short boards, usually factory installed, which are used behind a plug-in unit such as a 90P1X power supply.

90CWB1 Installed in card socket, connects busses to customer terminals. Customer terminals become "right main bus" terminals.

90CWB2 Installed in card socket, connects crossover links to customer terminals. Used with Meter Set Analog systems only.

90CWB3 Installed in card socket, connects FC output of 90P1X* power supply to one row of customer terminals (all FC's).

90CWB5 Dual card wiring board required in 94 style modules for interconnecting 90P3* to 90PT* (power transfer).

90CWB6 For use in special 94RM10FL flasher chassis, only. Chassis has cross-over links between adjacent sockets, only (no main busses). 90CWB6 is installed in card slot A (or C), flasher card in slot B (or D). Flasher connections which normally appear on main bus terminals will appear on customer terminal block A (or C) as follows: FF (TB1), SF (TB2), +24 (TB4), OV (TB5), SH (TB6) and FH (TB7). Up to 10 flashers can be mounted in a 94RM10FL.

POWER INTERLOCK (90DT, 90DH or 90CFH door operated)

Model 90DPA*

Requires remote 50-X3/WB3 and a 91JB2 Jumper board in slot C. 90DPA* occupies lower half of lower right corner module (front view). Upper half of module can be utilized as follows:

90DPA000 No lamps, no card, black 92NP nameplate.

90DPA111 Single point card, one color sequence, 92NP* nameplate.

90DPA112 Single point card, two color sequence, 92NP* nameplate.

90DPA211 Two single point cards, one color sequence, two 94NP* nameplates.

90DPA221 One twin point card, one color sequence, two 94NP* nameplates.

90DPA1PL Used with flasher card with 1PL option, one 92NP1RD "Power-On" nameplate.

FLASHER AUDIBLE CARDS

Model 90F*X*

90F1X1PB Standard flasher. Has fast flash oscillator output (FF bus), slow flash oscillator output (SF bus), first (alarm) horn enable input (FH bus) which initiates first horn output (flasher term. 7), second (ringback) horn enable input (SH bus) which initiates second horn output (flasher term. 6), and allows for use with pushbutton station.

90F2 Slave flasher for systems over 300 points. Same as 90F1X1PB except flash oscillators are triggered from FF and SF outputs of 90F1X1PB.

Options:

1DN Dim lamps in normal. This option *must* be used in Meter Set Analog Systems.

2H Alarm horn does not override ringback horn (2 horns on simultaneously).

1PB1PL Pushbutton station in lower half of module, power on indication in upper half.
Note: 90F* card with 1PB or 1PB1PL option must be mounted in card slot C or D.

4PL If flasher is installed in a module with no pushbutton station (with or without sequence cards) any window in the lightbox can be "power on" indicator. For example, with a 94LA lightbox, 4PL flasher in slot A will light top window, slot B, second window, etc.

INTEGRAL 24 VDC FILTERS

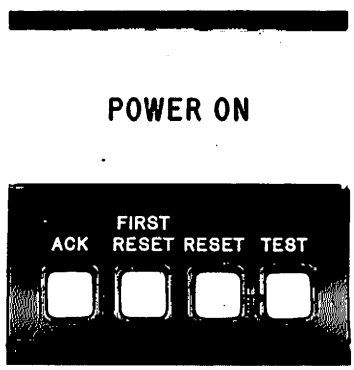

Model 90FT* See power supply section.

INTEGRAL POWER SUPPLIES

Model 90P* See power supply section.

INTEGRAL PUSHBUTTONS

MODEL 90PB43F1PL (Illustrated)

MODEL 90PBF**

Occupies area equivalent to that of 92NP1 nameplate (lower half of a module position). Remaining portion of module may be used for 1 or 2 active points or a power-on indicator (active points are not available if the pushbutton station is mounted in a module containing an integral power supply). Pushbutton *can only* mount in module positions having 2 or less active points. Normally pushbutton station will mount in front of the module position containing flasher or power supply. If pushbutton station is to mount in a module containing a power supply, replace F designation with P in Model No. If for lamp cabinet, replace F with L. Select Model No. for desired application and insert Option Code No.

MODEL NO.	DESCRIPTION
90PB11F***WH	1 Pushbutton—TEST for lamp indicator (LN1).
90PB21F***WH	2 Pushbuttons—ACK and TEST. For (AF1), (AF5), (MC1), (VA8).
90PB22F***WH	2 Pushbuttons—ACK and LAMP TEST. For (AF1), (MC1) with 3LT Option (P1 bus).
90PB222F***WH	2 Pushbuttons—ACK and LAMP TEST. For (AF1), (MC1) with 2LT Option (FT bus).
90PB31F***WH	3 Pushbuttons—ACK, RESET, and TEST. For (AF3), (AR1), (AS3).
90PB32F***WH	3 Pushbuttons—ACK, FLASH RESET, and TEST. For (AF2), (AF10).
90PB33F***WH	3 Pushbuttons—ACK, FIRST RESET, and TEST. For (TF1), (VA1), (VA5).
90PB34F***WH	3 Pushbuttons—ACK, TEST and LAMP TEST. For (AF1), (AF5), (MC1), (VA8) with 1LT option (P1 bus).
90PB41F***WH	4 Pushbuttons—ACK, FLASH RESET, RESET and TEST. For (AF4), (AR2).
90PB42F***WH	4 Pushbuttons—ACK, FLASH RESET, FIRST RESET, TEST. For (TF2), (VA2).

90PB43F*WH** 4 Pushbuttons—ACK, FIRST RESET, RESET, and TEST. For (TF3), (VA3), (VR1).

90PB44F*WH** 4 Pushbuttons—ACK, RETURN ACK, RESET and TEST. For (AR6).

90PB45F*WH** 4 Pushbuttons—ACK, FLASH RESET, TEST and LAMP TEST. For (AF2) with 1LT Option.

90PB51F*WH** 5 Pushbuttons—ACK, FLASH RESET, FIRST RESET, RESET and TEST. For (TF4), (VA4), (VR2).

90PB52F*WH** 5 Pushbuttons—ACK, FLASH RESET, RETURN ACK, RESET and TEST. For (AR7).

90PB53F*WH** 5 Pushbuttons—ACK, FIRST RESET, RETURN ACK, RESET and TEST. For (VR6).

90PB61F*WH** 6 Pushbuttons—ACK, FLASH RESET, FIRST RESET, RETURN ACK, RESET, TEST. For (VR7).

***Insert Option Code No.**

	Option Code	Active Points	
For Models 90PB**F or 90PB**L only	111	For 1 active point, single point card, 1-color seq. [2.W].	See notes
	112	For 1 active point, single point card, 2-color seq. [2.W].	
	211	For 2 active points, single point cards, 1-color seq. [4.W].	
	221	For 2 active points, twinpoint card, 1-color seq. [4.W].	
	000	No active points or power-on indication	
	1PL	For one power-on light (red nameplate, omit WH suffix) [2.W]	
Model 90PB**P only	2PL	For two power-on lights, primary and backup source, (red nameplates, omit WH suffix). For use with 90P3 power supplies only [4.W].	

Notes:

1. With Model 90PB**F, either a flasher card (with 1PB or 1PB1PL option), an integral filter (with 1PB or 1PB1PL option) or a jumper card (91JB6) must be located in card slot C or D.
2. For option codes 111, 112 or 221, sequence card must be located in card slot A. For option code 211, sequence cards must be located in slots A and B.

INTEGRAL HORN

Model 90PD*

90PDA1 occupies one module of annunciator cabinet. Steady 2900 Hz tone.

90PDA3 occupies one module of annunciator cabinet. Fast Pulsing 2900 Hz tone.

90PDL1 occupies one module of lamp cabinet. Steady 2900 Hz tone.

90PDL3 occupies one module of lamp cabinet. Fast Pulsing 2900 Hz tone.

INPUT REFLASH CARDS

MODEL 90RF* Input Reflash

Input reflash cards accept multiple field signal inputs and convert them to a common reflash output to a single remote annunciator point.

Different versions will accept dry contact inputs or optical isolated inputs and provide electronic outputs at various voltage levels or a dry contact output.

90RF1 Four "NL" type contact inputs. One electronic reflash output.

90RF2 Four "NL" type contact inputs. Two (one per pair) electronic reflash outputs.

90RF3 Four "NL" type contact inputs. One form "A" or "B" contact (isolated) reflash output.

90RF4 Three "KN" (opto isolator) type inputs. One electronic reflash output.

90RF5 Two "KN" (opto isolator) type inputs. One form "A" or "B" contact (isolated) reflash output.

90RF6 Two "NL" type contact inputs with one form "A" or "B" *contact follower* for each input and one common electronic reflash output.

MODEL NUMBER STRUCTURE

90RF X

① ② ③ ④ ⑤ ⑥ ⑦

① Variation Code (See above descriptions)

② Place Holder

③ Input Voltage
24DC, 48DC, 125DC for 90RF1, 2, 3 or 6
5V, 12V, 24V, 48V (AC/DC), 120AC, 125DC for 9RF4 or 5

④ Output Voltage (90RF1, 2, 4 or 6)
24DC, 48DC, 125DC

⑤ Relay Contact Configuration (Relay deenergized)
1A (normally open) or 1B (normally closed) for 90RF3 or 5
2A (normally open) or 2B (normally closed) for 90RF6

⑥ Add "E" for sealed relay (See NOTE)

⑦ 1NB no bus connection for 90RF1 or 2, only.
Without this option, FC feed to card may be via either (P3 bus) or customer terminal (TB5). With option, via (TB5), only.

NOTE Standard relay contact ratings: 5A up to 250 VAC or 24 VDC sealed contact relay ratings: 3A up to 250 VAC or 24 VDC

OUTPUT REFLASH CARDS

Accepts inputs from groups of sequence cards and produces a common reflash contact output. May be located in any available card slot.

MODEL NUMBER STRUCTURE

90RFR X17FTD1C

- Add **"E"** for sealed relay
  Unsealed form C output relay.
- **F** (Standard) fixed output pulse duration.
  A (Optional) adjustable pulse duration.
- Standard (100 mS) reflash pulse duration. Other options (20 mS to 500 Sec.) available.
- **1**—Use one per reflash group in the same cabinet. Sequence cards must have **"E"** and **"FHC"** outputs.
  2—Use when entire cabinet is to be reflashed. Sequence cards must have **"E"** outputs.

DUMMY LAMP CARDS

Model 91DL*

Accepts 120 VAC or DC input with 24V, 80 ma. output.

91DL1T120V 120 V input lights the pair of lamps in one window (or window section) of lightbox, depending on which card slot it is mounted in. No card can be installed in the adjacent card slot to the right of the 90DL* card.

91DL2T120V 120 V input provides 80 ma @ 24 V to customer terminals (TB6 & 7). No card can be installed in the adjacent card slot to the right of the 90DL* card.

JUMPER BOARDS

Model 91JB*. Each board occupies one position (card slot).

91JB1 For status lamps, Switch 0V to TB7 of 1 card for 91LA1, 2 for 92LA1, 3 for 93LA1, 4 for 94LA1.

91JB3 Same as 91JB1 except isolated lamp inputs to TB6 and 7.

91JB5 Jumpers TB1 through TB7. Connect FC to one terminal and gain 6 more FC terminals.

91JB6 Connects 90PB**F pushbuttons to busses in lieu of flasher or PSU. Add 1LT and/or 1PL options, if required.

91JB7 For 2 remote status lamps. With test diodes to P1 bus.

91JB8 For 4 remote status lamps. With test diodes to P1 bus.

91JB13 For status lamps in 94LA4 lightbox. Card in slot A. Switch 0V to TB4, 5, 6 or 7 for top, second, third or fourth lamps respectively.

91JB15 Same as 91JB1 except isolated lamp inputs to TB5 and 6.

92JB2 For status lamps, Switch 0V to TB6 or TB7 of 1 card for 92LA3, 2 for 94LA3, 3 for 96LA3, 4 for 98LA3 or 94LA9.

92JB4 Same as 92JB2 except isolated lamp inputs to TB4 and 5 and to TB6 and 7.

SERIES90 Power Supplies, Filters, Transfer Units

All Series 90 power supplies are load rated and designed to provide continuous reliable system operation. In addition, Series 90 provides interfacing units for redundant or back-up systems if required. Power cross-over, bumpless transfer, and diode ORing techniques may be used. Integral or remote 24VDC filters are available for input direct from 24VDC in lieu of a power supply.

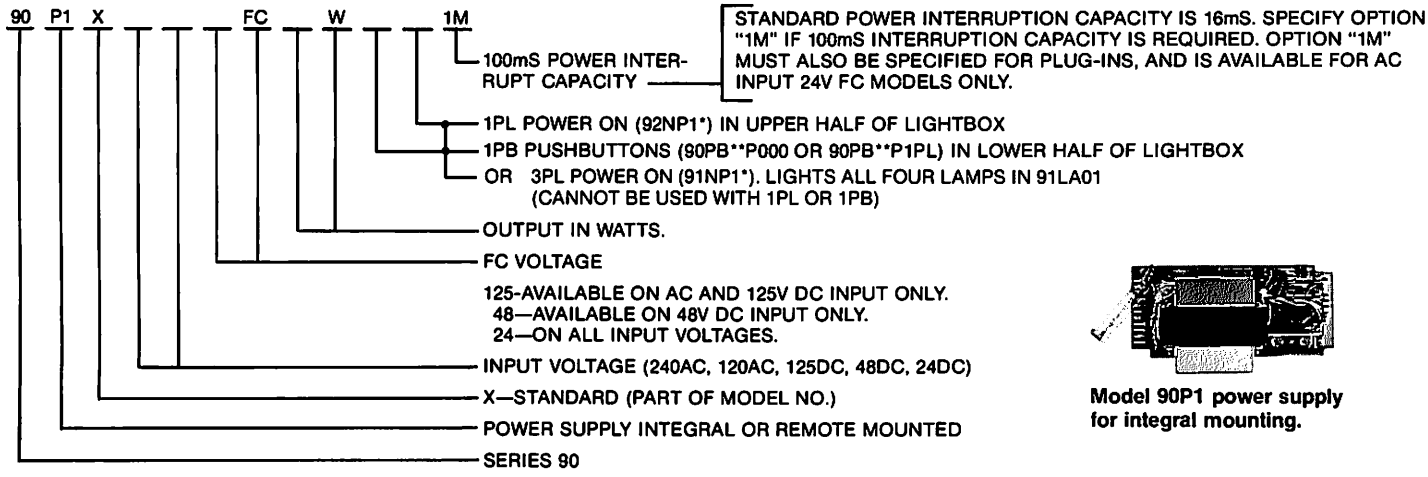

Model 90P1 Power Supply

SERIES90 Model 90FT2 Power Filter
(For Remote Mounting)

MODEL NUMBER	WATTAGE	INPUT VOLTAGE		CURRENT (A)	+24 OUTPUT VOLTAGE (DC)		CURRENT (A)	FC OUTPUT VOLTAGE (DC)		CURRENT (MA)	FUSES	
		NOM.	MAX.	MAX.	NOM.	MAX.		NOM.	MAX.	MAX.	F1 INPUT	F2 FC
90FT2X24DC24FC500W	500	24	32	20A	24	32	19	24	32	1000	20A	1AMP

MODEL NUMBER EXPLANATION:

90 FT2 X 24DC 24FC 500W

- 500W — OUTPUT IN WATTS
- 24FC — FC VOLTAGE 24V
- 24DC — INPUT VOLTAGE (24VDC)
- X — (X), PLACE HOLDER
- FT2 — REMOTE MOUNTING INPUT FILTER
- 90 — SERIES 90

NOTES:
1. WEIGHT 2.3 Kg (5 lbs.).
2. OPERATING TEMPERATURE 0°C to 50°C.
3. INPUT REVERSED POLARITY PROTECTED.
4. MAX. DC INPUT RIPPLE SHALL NOT EXCEED 20%.

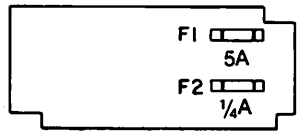

Model 90FT3 Power Filter (For Integral Mounting)

MODEL NUMBER EXPLANATION:

90 FT 3 X * * 24FC 125W

- 125W — OUTPUT IN WATTS
- 24FC — FC VOLTAGE (24V AVAILABLE ONLY)
- * — 1PL (OPTIONAL) WIRED FOR "POWER ON" LAMPS
- * — 1PB (OPTIONAL) WIRED FOR PUSHBUTTON ASSEMBLY
  1LT (OPTIONAL) REQUIRED FOR PUSHBUTTON ASSEMBLIES WITH LAMP TEST PUSHBUTTON
- X — PLACE HOLDER
- 3 — INTEGRAL
- FT — FILTER
- 90 — SERIES 90

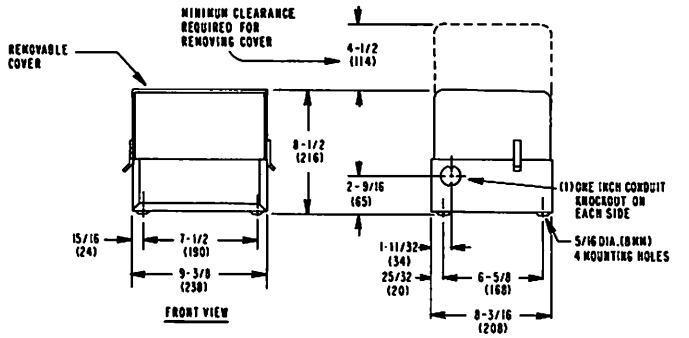

NOTES:
1. VOLTAGE TO FIELD CONTACTS IS NOT ISOLATED FROM SYSTEM SUPPLY BUT IS FUSED SEPARATELY.
2. THE "90FT3" HAS A CAPACITY OF 5A AT 24 VDC NOM (125W).
3. L.E.D. STATUS INDICATORS FOR INDICATION OF FC AND +24V FUSE STATUS.
4. INPUT REVERSED POLARITY PROTECTED.
5. WHEN USED WITH 1PB, 1LT OR 1PL OPTIONS, THE '90FT3' CAN ONLY BE USED IN CARD POSITIONS "C" OR "D".

Model 90BT* Bumpless Power Transfer (For Remote Mounting)

The 90BT__ diode gates outputs of either two DC input power supplies or two in-phase (or 180° out-of-phase) AC input power supplies such that should either supply fail, the other will assume the load without system malfunction.

If an AC input primary power supply and DC input backup power supply combination is required, use the 90PT1 (described on page 38) or the 90PT2 (described below) power transfer unit. The 90PT2 can also be used with two out-of-phase AC input power supplies.

Model 90BT1*
(Non-Isolated FC Voltage)

Model 90BT1* is equipped with 2 relay sockets, mounted and wired for optional model 90AX2 power failure monitor relays. Relay is energized in normal. If logic voltage (+24) or field contact voltage (FC) fail, relay will de-energize. Each 90AX2 has (2) Form "C" contacts rated at 5 amp resistive at 28VDC or 120VAC and 0.5 amp at 125VAC.

MODEL NO. EXPLANATION:

90 BT 1 X 24DC FC

- SERIES 90

Model 90BT2* (Isolated FC Voltage)

Model 90BT2* is equipped with 2 relay sockets, mounted and wired for optional Mod. 50-X20-24/24 PWR. Failure monitor relays. Relay is energized in normal. If logic voltage (+24) or field contact voltage (FC) fail, relay will de-energize. Each 50-X20-24/24 has (1) Form "C" contact per relay rated at 2 amp resistive at 30VDC or 120VAC/250VAC. and .25A at 125VDC.

MODEL NO. EXPLANATION:

90 BT 2 X 24DC 24FC

- FC VOLTAGE
- LOGIC VOLTAGE
- PLACE HOLDER
- GENERIC NO. (FOR ISOLATED F.C. VOLTAGE)
- BUMPLESS TRANSFER
- SERIES 90

Model 90PT2 Power Transfer (For Remote Mounting)

MODEL NUMBER	WATTAGE	INPUT VOLTAGE		INPUT CURRENT (A) MAX	OUTPUT VOLTAGE		OUTPUT CURRENT	OUTPUT CURRENT	FUSES	
		LOGIC	FC		LOGIC	FC	LOGIC	FC	F1	F2
90PT2X24FC450W	450	24	24	20	24	24	19.6A	0.4A	20A	1A
90PT2X125FC450W	450	24	125	20	24	125	19.6A	0.4A	20A	1A

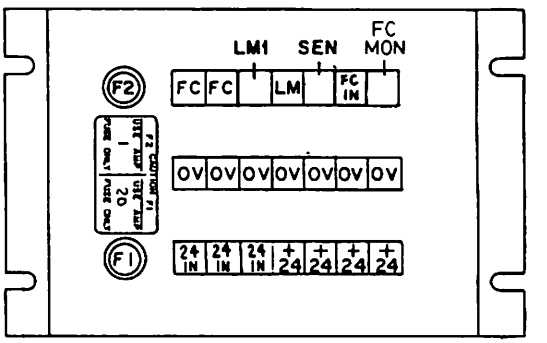

NOTES:

1. The 90PT2XFC450W weighs 3.29Kg. (7.25 lbs.).
2. Operating temperature 0°C to 50°C.
3. FC input must be filtered DC voltage, (max. 5% ripple)
4. LM1 terminal is for indication that back-up power is on line.
5. LM terminal is for indication of loss of primary power.
6. The 90PT2 can be used with either isolated or non-isolated FC systems.
7. Both +24 and FC are fused.
8. Power transfer (Relay/transistor switching) is less than 16 mS and provides complete isolation of power supply outputs, allowing the use of any combination of power supply inputs (AC-DC, DC-DC or AC-AC, from in-phase or out-of-phase sources). Annunciator power will not be lost during transfer.
9. Power transfer will occur only if power supply input source power fails. It will not transfer on +24 or FC fuse failure since transfer would likely cause backup fuse failure also. Therefore, it is important that two Model 90AX2/WB3 power failure monitors be wired into the system, one to monitor + 24 and FC outputs (including fuses) of the primary supply and one to monitor outputs of the backup supply.
10. Dimensional outlines are identical to those shown for the 90FT2 Power Filter on facing page.

MODEL NO. EXPLANATION

90 PT 2 X FC 450W

SERIES90 Ordering Information

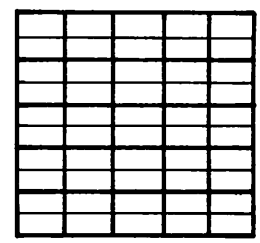

To Order INTEGRAL Annunciator System

1. Select the flush mount cabinet size required. List the number of cabinets required by Model Number type and complete the Model Number with the number of lightbox rows high and lightbox rows (columns) wide for each cabinet. It is recommended that an "ORDERING MATRIX" (see Page 48) be used.
2. Select the quantity and type of lightboxes required for each cabinet. The number of sequence cards and type (single or twinpoint card) required for each cabinet module position will determine the model lightbox required. There are eight lightbox styles available depending on usage with single or two color sequences and single or twinpoint sequence cards. See Pages 12 & 13.
3. Select one flasher/audible card for each cabinet or each group of cabinets to be wired as a single system. Each flasher is capable of operating up to 300 sequence card points. Model 90F1X1PB is the standard F/A card. See Page 34 for slave flasher/audible card and options.
4. Select the quantity and type of sequence cards required. See Pages 14 & 15.
5. If other than the standard sequence card is required, select the input and output features required and add the option code designations to the sequence card model numbers. See Pages 20 through 23.
6. Select the power supply. Pages 36 through 41 describe power supplies for integral or remote mounting. Size the total system load and the power supply(s) required for input and total load (see Pages 46 & 47). If 24VDC is the primary input, and isolation is not required, select a 90FT* filter in lieu of a power supply.
7. Select integral or remote pushbuttons. Integral pushbuttons occupy lower half of a cabinet module position. Pages 34 & 35.
8. Select audible devices and/or common auxiliary relay and mounting boxes as required. Page 33.
9. If required, NEMA 12 and NEMA 4 surface mount enclosures are also available, (see page 7) or select an enclosure or door as shown on Page 8. Special enclosures and doors are also available. Consult your PANALARM Representative or the Factory.
10. List nameplate engraving information.

Ordering Examples

Example #1 (Integral)

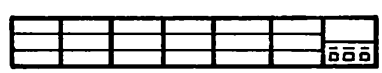

System Description—50 points, nameplates 1½" x 3" (approx.). Basic flashing sequence, remote power supply, common auxiliary contact for 120V audible, 120V 50-60 Hz input, 24VDC Signal Contact Voltage. Remote pushbuttons. (Future expansion to double system size *not* required).

Qty.	Model No.	Component Description		*Load (Watts)
1	94CA55	Annunciator Cabinet, 5 module rows high x 5 module rows wide.		
25	92LA01	Dual window light boxes.		100W
50	92NP1WH	White nameplates for dual point light boxes.		
1	90F1X1PB	Flasher/Audible output card (Pos. 5-5D)		1.5W
50	91AF1T24DC	Sequence AF Cards for 24VDC signal contact voltage (all card slots A and C).		48.6W
1	90P2X120AC24FC450W	Remote 120VAC 50-60 Hz power supply with 24VDC signal contact voltage.	450W	
2	SW-102	Remote Mounting Pushbuttons one for ACK, one for TEST.		
1	90AX1	Common Auxiliary Relay with three SPDT contacts.		1.5W
1	WB-3	Relay Mounting Box.		
1	HSA 120AC 50-60 Hz	Remote Horn		
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.			System Load (Watts):	151.6W

Example #2 (Integral)

System Description—18 points, nameplates 1" x 3" (approx.). First-out manual reset sequence, SPDT auxiliary contact per point, integral pushbuttons, 125VDC input, 24VDC signal contact voltage, integral power supply, and remote audible device.

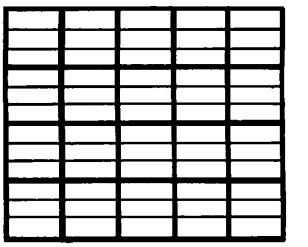

Qty.	Model No.	Component Description		*Load (Watts)
1	94CA17	Annunciator Cabinet, 1 module row high x 7 module rows wide.		
6	93LA01	Lightboxes with tri-window.		36W
18	93NP1WH	White nameplates for triple point light boxes.		
1	90F1X1PB	Flasher/Audible output card (Pos. 1-6D).		1.5W
18	91TF3T24DC	Sequence TFSM card for 24VDC signal contact voltage and integral SPDT auxiliary contact (Pos. 1-1A, B, C, through 1-6A, B, C).		33.7W
1	90P1X125DC24FC80W1PB	Integral 125VDC power supply with 24VDC signal contact voltage, (Pos. 1-7).	80W	
1	90PB43P1PL	Integral Pushbutton station, ACK, FIRST RESET, RESET and TEST, with power-on light (Pos. 1-7).		2.0W
1	NT2-24D	Novatone Multitone audible.		2.4W
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.			System Load (Watts)	75.6W

Example #3 (Tri-Point Integral Only)

See Bulletin 93 for details

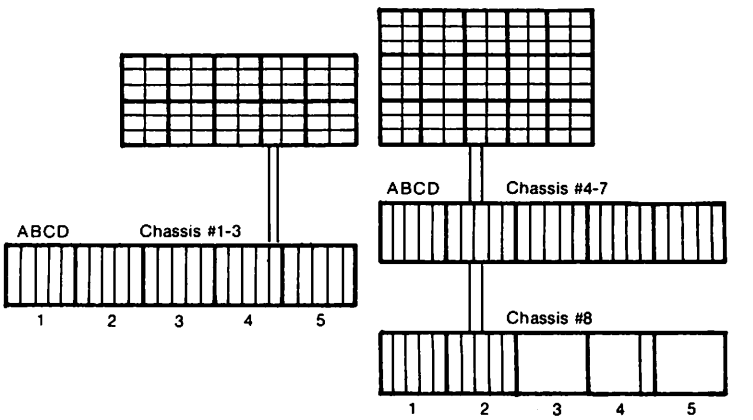

System Description—60 points, nameplates 1" x 3" (approx.). Multiple sequence (field selectable), remote power supply, form B auxiliary contact per point, 120V, 50-60 Hz input, 24 VDC signal contact voltage. Remote pushbuttons and remote multitone audible.

Qty.	Model No.	Component Description	*Load (Watts)
1	94CA45	Annunciator Cabinet, 4 module rows high x 5 module rows wide.	
20	93LA31	Triple window light boxes.	120W
60	93NP1WH	White nameplates for triple window light boxes.	
1	90F1X1PB	Flasher/Audible output card (Pos. 4-5D)	1.5W
20	93MP1X4D	Tri-point multiple sequence cards for 24VDC signal contact voltage (All card slots A).	80W
20	93AXC1B	Tri-point auxiliary relay cards (all card slots B).	60W
1	90P2X120AC24FC450W	Remote 120VAC 50-60 Hz power supply with 24VDC signal contact voltage. 450W	
3	SW-102	Remote mounting Pushbuttons for ACK, TEST and RESET.	
1	NT2-24D	Novatone Multitone audible.	1.5W
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts):	263.0W

To Order REMOTE Annunciator System

1. Select the lamp cabinet required. See Page 11. Model 90CL or 90CLP is the basic model number. Complete the model number by inserting the number of lightbox rows high by lightbox rows wide. (Model 90CLP lamp cabinets require lamp cables. See step 4.)
2. Select the quantity and Model lightboxes required. See Pages 12 & 13. Lightboxes are available for single, dual, triple, quad, hex or octal point indication per lightbox module position.
3. Select the quantity and type of remote logic chassis to satisfy the mounting configuration required. See Pages 10 & 11.
4. For split architecture systems, installation costs can be greatly reduced by using prefabricated cabling from annunciator logic chassis to lamp cabinets (20 points per cable) and, if required, from chassis to signal input terminals and/or to aux. output terminals. After specifying lamp cabinets and remote chassis with MS connectors, determine required cable lengths, and whether straight or elbow type MS connectors are required at cable ends. Then contact your PANALARM representative for specific model numbers.
5. Follow Steps 3 through 10 of the Integral System order procedure.

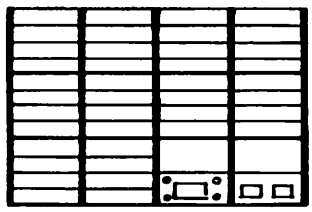

Example #4 (Remote)

System Description—150 Points, nameplates 1" x 1½" (approx.). Double ringback sequence, separate audible on return to normal. With 150 foot cables for connection of chassis logic to lamp cabinets (one 60 points and one 90 points), 19" rack mounting logic chassis, 120VAC 50-60 Hz input, 125VDC signal contact voltage.

Qty.	Model No.	Component Description	*Load (Watts)
1	90CLP25M3	Lamp Cabinet, 2 module rows high x 5 module rows wide with connectors for lamp cables.	
10	96LBX01	Hex Window Lightboxes.	60W
30	96NP1WH	White nameplates for hex point light boxes.	
1	90CLP35M5	Lamp Cabinet, 3 module rows high x 5 module rows wide with connectors for lamp cables.	
15	96LBX01	Hex Window Lightboxes.	90W
45	96NP1WH	White nameplates for hex point light boxes.	
8	94RM01LXX0005 (contact factory for specific model numbers)	Rack Chassis, 20 points, with lamp cable connectors.	
8	57CBL01Y02Y150N	Lamp Cables with straight connectors, 150 ft. long, non-PVC.	
1	90F1X1PB	Flasher/Audible Output Card, mounted in chassis #8, module 4 slot D.	1.5W
150	91AR1T125DC	Sequence ARR Card, 125VDC signal contact voltage.	251W
1	90P2X120AC125FC450W	Power Supply Input 120AC 50-60 Hz., 125DC Field Contact Voltage, Rack mounted. 450W	
2	NT2-24D	Novatone Multitone Audibles programmable for different tones to provide different audible sounds on alarm and return-to-normal. (16 Field selectable tones).	4.8W
3	SW-102	Remote Mounting Pushbuttons ACK, RESET and TEST.	
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts):	407W

SERIES90 Ordering Information

Example #5 (Meter Set, Integral)

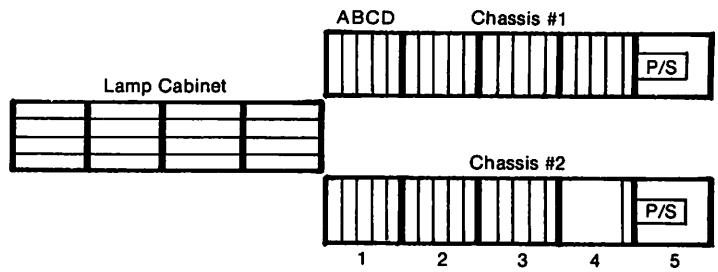

System Description—20 points dual set, thermocouple Type J. Aux contact NC. Input 120VAC. Window size $^{11}/_{16}$" H x $3^{5}/_{16}$" W per indication. Basic flashing sequence AF. Integral pushbuttons.

Qty.	Model No.	Component Description	*Load (Watts)
1	94CA34	Integral logic cabinet, 3 module rows high by 4 module columns wide.	
10	94LA03	Quad window light boxes. For dual setpoint indication of two inputs per module position.	80W
40	94NP1WH	White nameplates for quad point light boxes.	
1	90F1X1DN1PB1PL	Flasher/Audible Output Card (Position 3-4D)	2.0W
20	92AF1DM12DC4B	Twinpoint sequence card, Sequence AF with integral Form B (SPST) auxiliary contacts per point (all module positions, slots A and C except display and pushbutton positions).	56W
20	91AD2TC1	Analog input card meter set, Type J thermocouple, dual setpoint (all module positions, slots B and D except display and pushbutton positions).	50W
20	90ATB1	Cold junction compensator	
1	90PB21F1PL	Integral pushbutton station with power on light, ACK and TEST. (position 3-4).	2.0W
		Digital display (position 3-3) consisting of the following:	
1	90 FD1	Front display	0.5W
2	90CWB2	Interface boards (slots A and C)	
1	90CPX1	Processing board (slot B)	6.5W
1	90YM1	Matrix board (slot D)	2.5W
1	NT2-24D	Novatone multi tone audible	2.4W
1	90P2X120AC24FC450W	Remote power supply 120V, 50-60 Hz input 450W	
1	CF1	Cooling fan 120V, 50-60 Hz, mounted on rear cover	
1	90TP2	Test probe	
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts)	201.9W

SEE "ORDERING MATRIX", PAGE 48

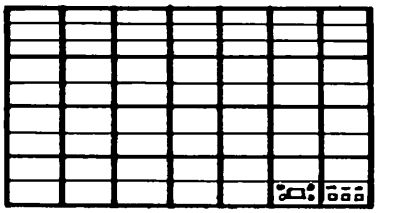

Example #6 (Blind Set, Remote)

System Description—14 points single setpoint analog input total, comprised of 7 (active) 4-20mA inputs and 7 Thermistor (2252 ohm) inputs. Alarm sequence AR. Window size $^{11}/_{16}$" H x $3^{5}/_{16}$" W (lamp cabinet). Remote chassis to include 120V, 50-60 Hz input power supply. Chassis to be rack mounted with rear access terminals. Remote audibles for alarm and return-to-normal. Remote pushbuttons.

Qty.	Model No.	Component Description	*Load (Watts)
1	90CL14	Lamp cabinet.	
4	94LBX01	Quad window light boxes.	32W
16	94NP1WH	White nameplates for quad point light boxes.	
2	94RM01	Rack mounted chassis.	
1	90F1X1PB	Flasher/audible card, mounted in Chassis #2 module 4 slot D.	1.5W
14	91AR1DB12DC	Sequence cards, Sequence AR. All slots A and C in modules 1-4 of Chassis #1 and 1-3 of Chassis #2.	12.6W
7	91AB1AXD1	Blindset analog input cards. Programmable for 0.25 to 1.25V to accept 4 to 20mA input signals. Chassis #1 slots B and D of first three modules and slot B of module 4.	16.1W
7	91ATB9	Current conversion resistor block 61.9 ohms mounted on rear terminals of slots having 4 to 20mA input signals.	
7	91AB1TM5	Blindset analog input cards for 2252 ohm thermistor Chassis #1 slot D of module #4 and Chassis #2 slots B and D of modules 1, 2 and 3.	16.1W
2	90P1X120AC24FC80W	Power supply 120V 50-60 Hz with 90CWB3 FC jumper board, module 5, each chassis 160W	
3	SW-102	Remote pushbuttons ACK, RESET, and TEST.	
2	NT2-24D	Novatone multi tone audibles for alarm and return-to-normal	4.8W
1	90TP2	Test probe	
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts)	83.1W

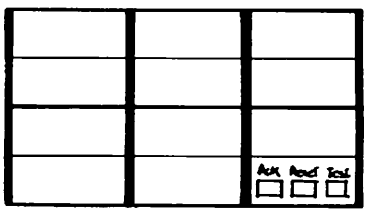

Example #7 (Meter Set, Integral)

System Description—Ten Type T thermocouple inputs, nine 3-wire 120 ohm Ni RTD inputs, and 21 contact inputs. All points to have SPDT Form A (NO) aux contacts. All analog points will have 1-5V analog outputs. All analog points will be dual setpoint for high/low monitoring. Integral pushbuttons and meter. Remote power supply, 120V 50-60 Hz AC input, field contact voltage 24 DC. Integral digital display meter. Window size for analog points 1 7/16" H x 3 5/16" W per indication. Window size for dry contact input points 15/16" H x 3 5/16" W per indication. Sequence AF analog inputs, Sequence TFS contact inputs. Contact inputs row 1, analog inputs in rows 2, 3, and 4. Thermocouple range 185° to 370°C. RTD range 60° to 180°C. Remote audible.

Qty.	Model No.	Component Description	*Load (Watts)
1	94CA47	Integral logic cabinets, 4 module rows high x 7 module columns wide.	
7	93LA01	Tri window light boxes.	42W
21	93NP1WH	White nameplates for triple point light boxes.	
19	92LA03	Dual window light boxes for dual setpoint indication.	76W
38	92NP1WH	White nameplates for dual point light boxes.	
1	90F1X1DN1PB1PL	Flasher/audible output card (Pos. 4-7D)	2W
21	91TF1NL24DC4A	Sequence cards, Sequence TFS with integral Form A auxiliary contact. All A, B & C slot positions in row 1.	30.9W
19	92AF1DM12DC4A	Twinpoint sequence cards Sequence AF with integral Form A aux contact (A slots in rows 2, 3 and 4 except positions 4-6 and 4-7) for interface with analog input cards.	53.2W
10	91AD2TC3	Meter set analog input card, T type thermocouple, dual setpoint and drive output for analog output cards (All B slots row 2 and B slots in positions 3-1, 3-2 and 3-3).	25W
10	90ATB1	Cold junction compensators for above cards.	
9	91AD2R3	Meter set analog input card, 3-wire 120 ohm Ni, dual setpoint and drive output for analog output cards. All B slots 3-4 through 3-7 and 4-1 through 4-5.	22.5W
19	91AL2	Analog output card 1-5V, over full monitoring range of input thermocouple or RTD. (All C slots in rows 2, 3 and 4 except positions 4-6 and 4-7.)	57W
1	90B31F1PL	Pushbutton station and power on light ACK, FIRST RESET, and TEST (position 4-7).	2W
		Digital display and expander cards (positions 4-6 and 4-7, slots A & B) consisting of the following:	
1	90FD1	Front display	0.5W
1	90CPX1	Processor board, position 4-6B	6.5W
1	90YM1	Matrix board, position 4-6D	
1	90YM2	Matrix expander board, position 4-7B	2.5W
3	90CWB2	Interface boards, position 4-6A, 4-6C, and 4-7A	
1	NT2-24D	Remote Novatone multi tone audible.	2.4W
1	90P2X120AC24FC450W	Remote power supply 120V 50-60 Hz, 24 DC field contact voltage. 450W	
2	CF2	Cooling fans 120V 50-60 Hz, mounted on rear cover.	
1	90TP2	Test probe	
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts)	322.5W

Example #8 (Blind Set, Integral)

System Description—9 points single setpoint. Current input 4-20mA. Form C aux contacts. Window size 1 7/16" H x 3 5/16" W. Integral pushbuttons. Integral power supply 120VAC. Manual reset sequence AM.

Qty.	Model No.	Component Description	*Load (Watts)
1	94CA23	Integral logic cabinet, 2 module rows high by 3 module columns wide.	
5	92LA01	Dual window light boxes. For two single setpoint indications.	20W
10	92NP1WH	White nameplates for dual point light boxes.	
1	90F1X1PB	Flasher/audible output card (Pos. 1-3C).	1.5W
9	91AF3DB12DC4C	Single point sequence card, Sequence AF with integral Form C (SPDT) auxiliary contact (all module positions, slots A and C except 2-3 and slot C of 1-3)	12.6W
9	91AB1AXD1	Analog input card (blindset) programmable for 0.25 to 1.25V to accept 4 to 20mA input signals (all module positions slots B and D except 2-3 and slot D of 1-3).	20.7W
9	90ATB9	Current conversion resistor block 61.9 ohms, terminal mounts (all card positions B and D except 2-3 and D of 1-3).	
1	90PB31P1PL	Pushbutton station position 2-3, ACK, RESET and TEST.	2W
1	90P1X120AC24FC80W1PB1PL	Integral power supply 120V 50-60 Hz input with one 90CWB3 FC jumper board. (Pos. 2-3) 80W	
1	NT2-24D	Novatone multi tone audible	2.4W
1	90TP2	Test probe	
Nameplate engraving as per customer supplied list. *Extended component loads for power supply sizing.		System Load (Watts)	58.3W

SERIES90 Power Consumption Charts

INSTRUCTIONS FOR USE:

DETERMINE TOTAL NUMBER OF SEQUENCE CARDS WITHIN SYSTEM (INCLUDING OPTIONS). QUANTITY TIMES APPLICABLE RATING(S) IS EQUAL TO THE NUMBER OF WATTS REQUIRED TO POWER SEQUENCE CARDS. REPEAT THIS PROCEDURE FOR LIGHTBOXES, ACCESSORIES AND ANALOG AS REQUIRED. WHEN TOTAL POWER (WATTS) IS CALCULATED REFER TO POWER SUPPLY PAGES 36 THROUGH 41 TO DETERMINE SIZE AND QUANTITY.

90RF2		2.2W
90RF3		2.5W
90RF4		1.4W
90RF5		2.0W
90RF6		2.2W
REFLASH SIGNAL INPUT		WATTS
90RF1	24V	.288W
90RF2		.288W
90RF3		.288W
90RF4		.216W
90RF5		.144W
90RF6		.144W
90RF1	12V	.152W
90RF2		.152W
90RF3		.152W
90RF4		.114W
90RF5		.076W
90RF6		.076W
90RF1	48V	.576W
90RF2		.576W
90RF3		.576W
90RF4		.432W
90RF5		.288W
90RF6		.288W
90RF1	125V	1.5W
90RF2		1.5W
90RF3		1.5W
90RF4		1.125W
90RF5		.750W
90RF6		.750W

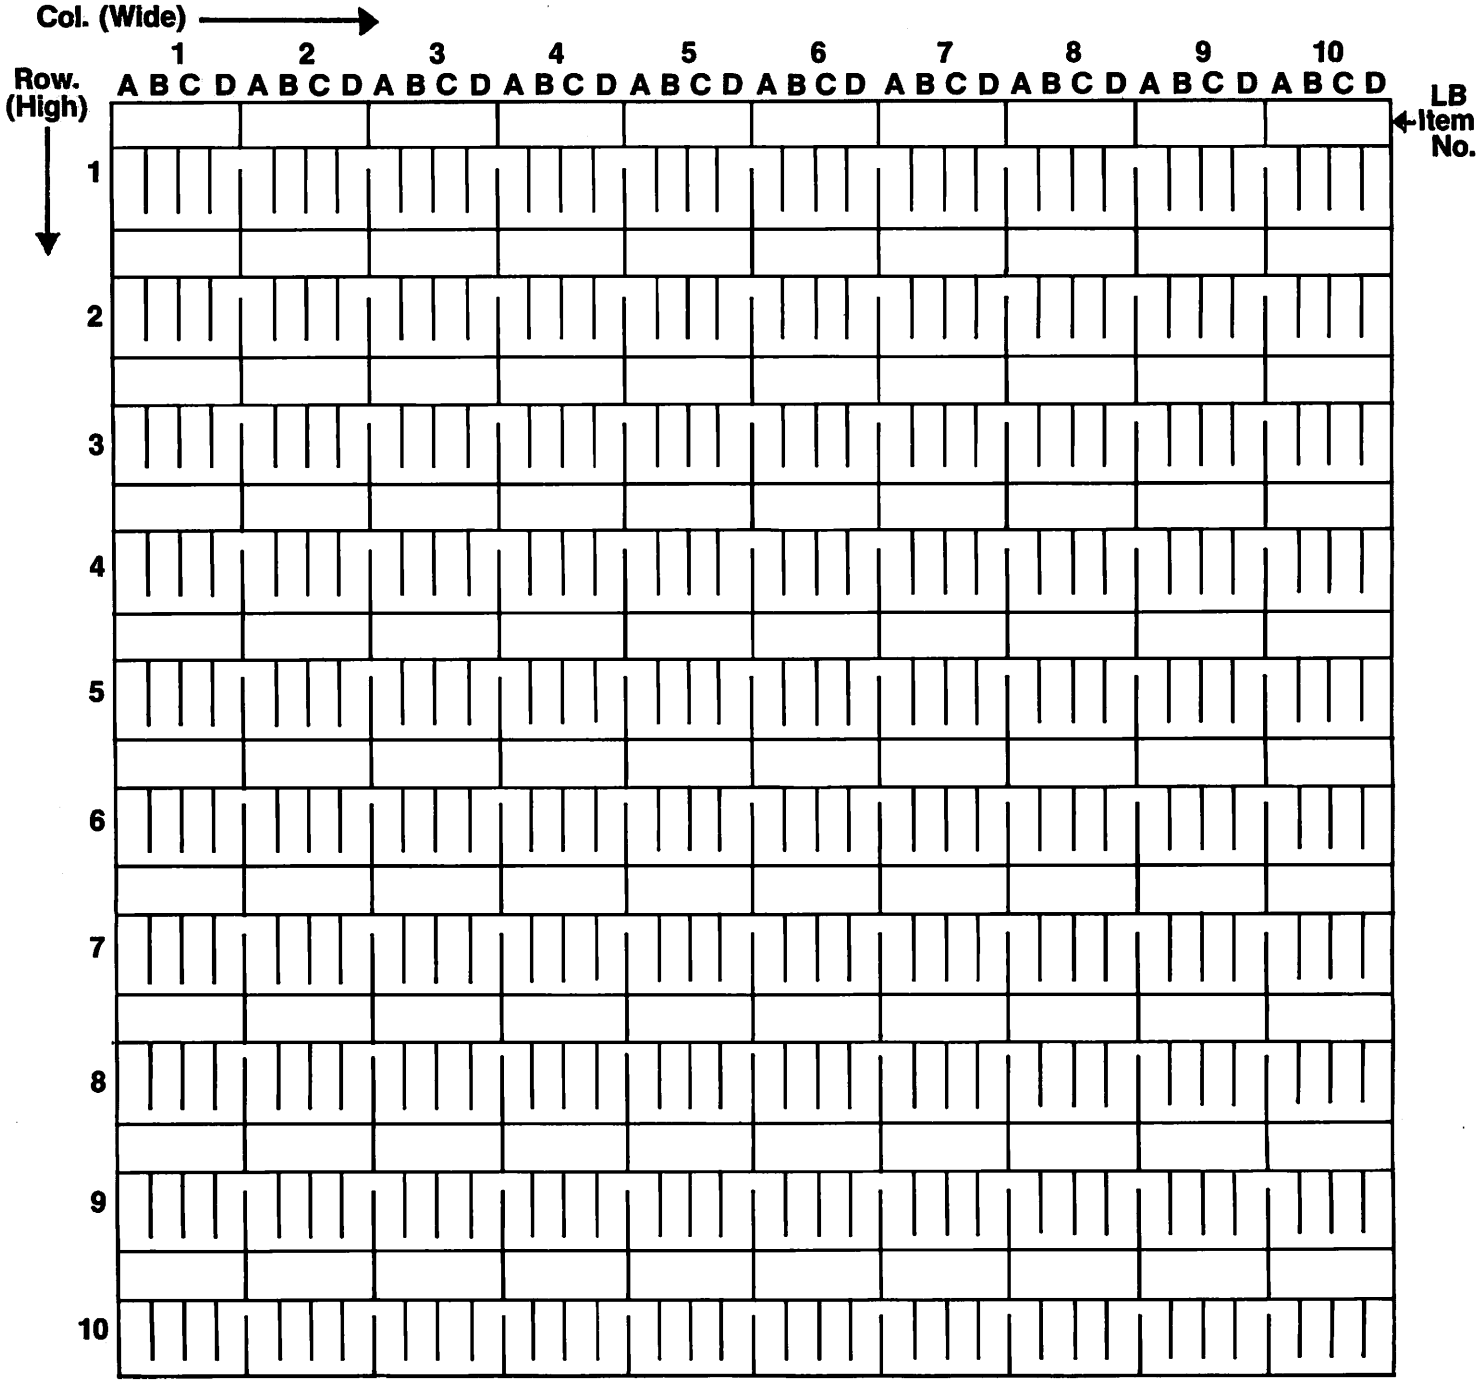

ANALOG (PER ASSEMBLY)	
BLIND SET	WATTS
91AB*	2.3W
LC, PXD OPTION	1.0W
METER SET	WATTS
91AO*	2.5W
LC, PXD3 OPTION	.75W
ANALOG OUTPUT	WATTS
90AL*	3W
DIGITAL DISPLAY	WATTS
90F01	9.5W
MADE UP OF THE FOLLOWING	
(REF. 90CPX1)	6.5W
(REF. 90YMX*)	2.5W
(REF. 90FD1)	0.5W

= TOTAL SYSTEM POWER (SEE INSTRUCTIONS)

NOTE

1. TOTAL REFLASH CARD WATT RATINGS ARE CALCULATED BY ADDING THE REFLASH INPUT AND REFLASH SIGNAL INPUT WATT RATINGS EXAMPLE: 90RF1, 24V, 1.4W & .288W OR A TOTAL OF 1.688 WATTS.
2. FOR 6 OR 12 VOLT LAMP RATING REFER TO APPLICABLE 9*405-* WIRING DRAWING.
3. 6GP=0.9W

SERIES90 Ordering Matrix

FRONT VIEW (Size H x W) (Model No.)

Card/Lightbox Model Nos.

Item No.	Item No.	Item No.
1	8	15
2	9	16
3	10	17
4	11	18
5	12	19
6	13	20
7	14	21

Guide for Use

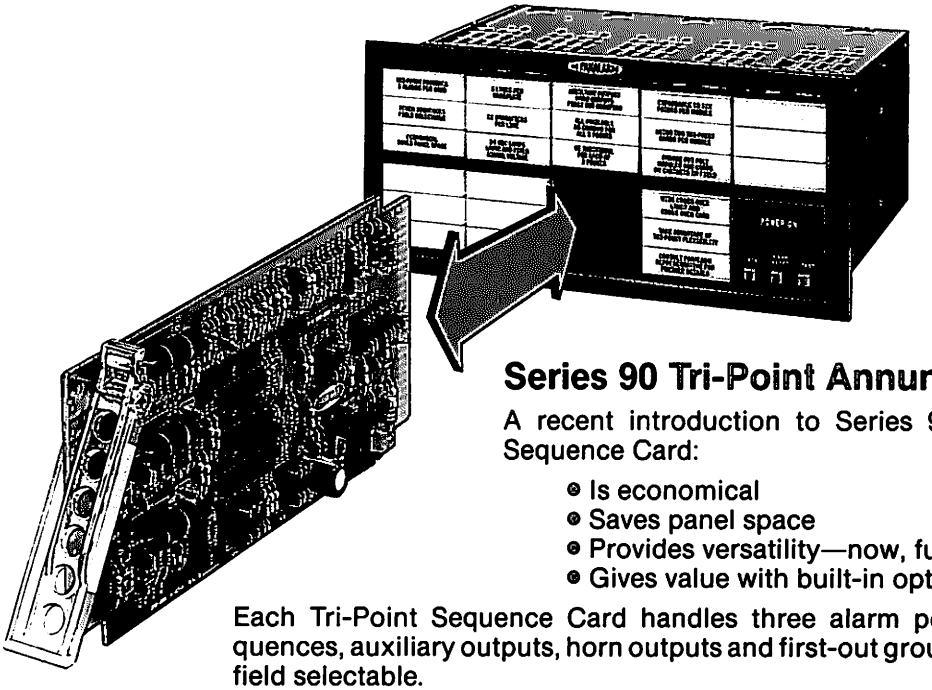

1. Define cabinet size by heavying up cabinet (rows high x columns wide.
2. List model numbers in spaces at left.
3. Place card Item No. in each card position where card is to be slotted (position A, B, C, or D of each module). Repeat for each card used. Do same for lightboxes.
4. "–" indicates no card at this location.

SERIES90 Tri-Point Annunciator

At a modest price, PANALARM can provide a composite customer wiring diagram, customized to the exact configuration of the Series 90 cabinet. The drawing incorporates all components of the annunciator system including remote devices such as auxiliary relays, horns and pushbuttons. CAD generated, the wiring diagram is extremely beneficial for customer start-up, virtually eliminating field problems related to wiring confusion.

This enhancement can also serve as a short-cut to helping customers with tying in the annunciator to their overall system drawing requirements.

For more information, contact the factory or your nearest PANALARM representative.

Series 90 Tri-Point Annunciator

A recent introduction to Series 90, the Tri-Point Sequence Card:

- Is economical
- Saves panel space
- Provides versatility—now, future, retrofit
- Gives value with built-in options.

Each Tri-Point Sequence Card handles three alarm points. Seven sequences, auxiliary outputs, horn outputs and first-out grouping options are field selectable.

For additional information, refer to Bulletin 93 or consult your nearest PANALARM representative.

WARRANTY

Three year warranty in accordance with terms and conditions of sale, Form AP-85

TERMS

Net 30 days, F.O.B. factory, freight prepaid and added. Shipments are normally made by UPS Ground or Motor Freight. For faster shipment, specify UPS Red or Air Freight.

CONFIRMATION

Avoid duplication of Purchase Order by marking confirming Purchase Order "CONFIRMATION."

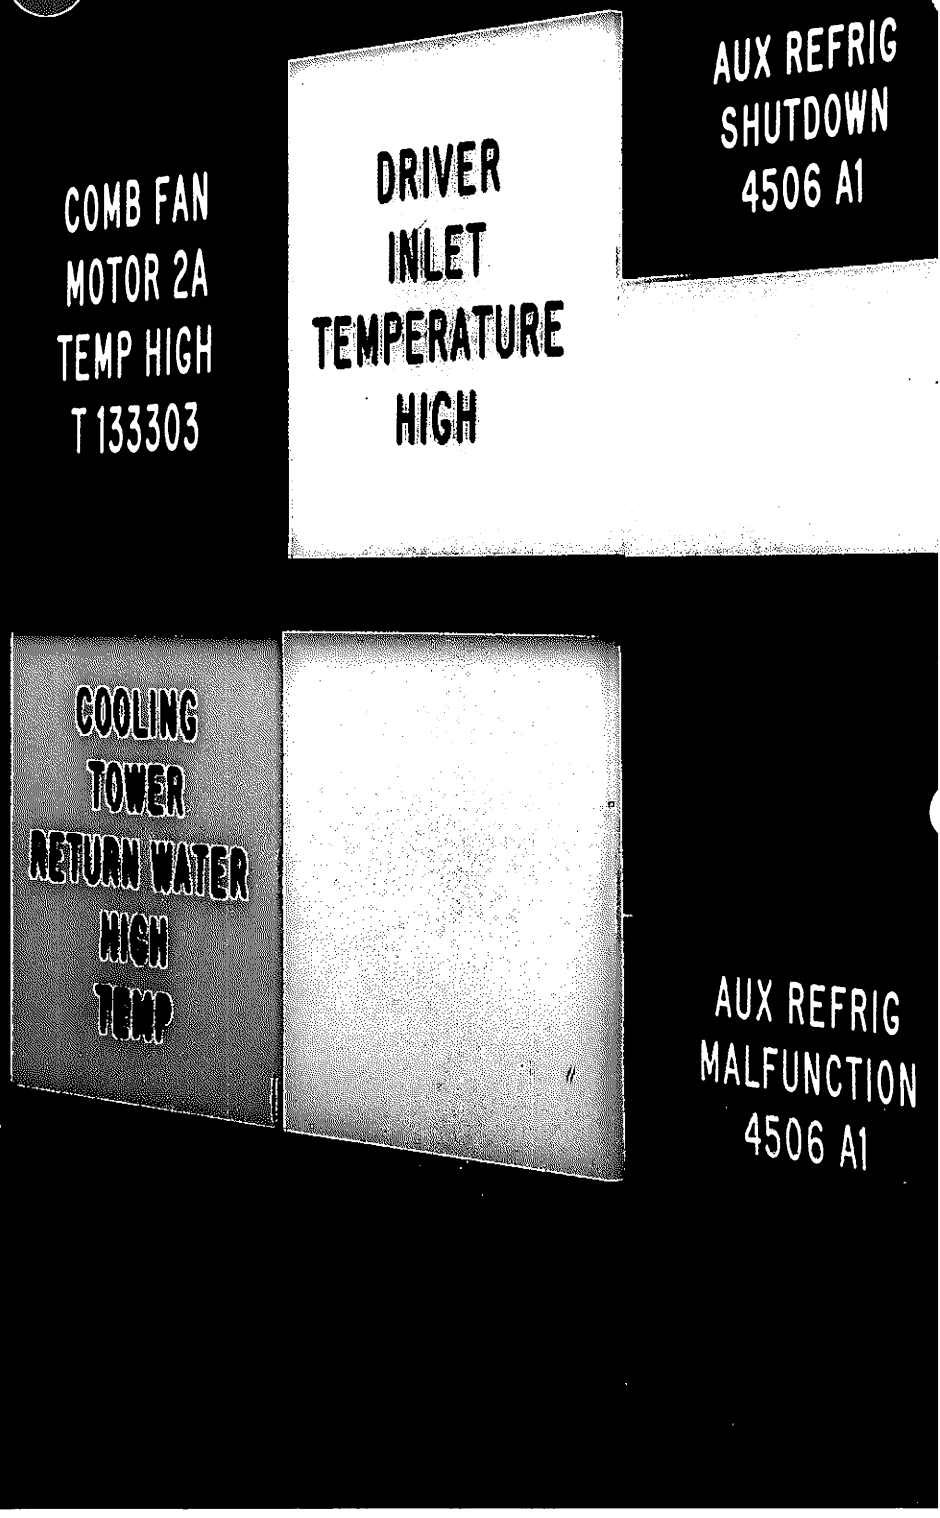

SHIPMENT

Normal shipment is approximately four (4) weeks. However, please check with your nearest PANALARM representatives office. System requirements may be a determining factor.

Specifications and designs subject to change without notice.
