Description

The 2035 step motor driver is a full or half drive, step phase sequencer with three state switching amplifiers and optoisolated circuits. The drive also includes an automatic feature to lower motor current by 50% anytime the motor is left at rest for more than one second. This feature can be disabled.

The amplifier regulates motor current by chopping at a constant, inaudible frequency. Phase current is selected from 16 levels by a DIP switch. Full or half resolution is switch selectable.

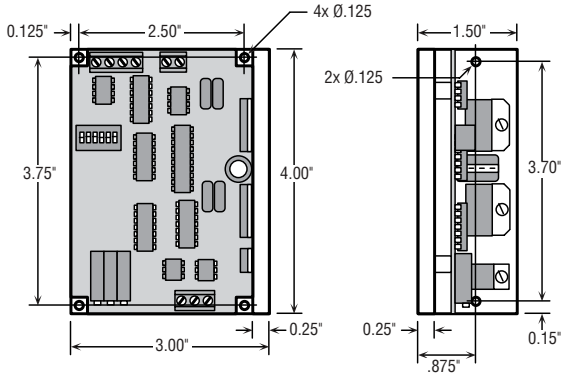

Recommended motors for the 2035 drive:
