Research Control Mag

Literature

The Research Control® magnetic flow meters are designed for extremely low flow applications of corrosive, conductive liquids with full-scale flow rate down to 30 cc/min and up to 12 GPM. The advanced microprocessor based electronic converter features user-friendly programming software that allows for easy operator setup. Utilizing ceramic flow tubes with platinum electrodes allows for highly accurate, (typically plus/minus .5% of reading) stable and reliable flow measurement. Available in tube sizes ranging from 1/24"- 3/8" (DN1 - DN10). Internal NPT threaded and 3A sanitary approved connections are available.

Applications: Chemical dosing and batching, food and beverage, pharmaceutical and low pulsating flows.
