BioRad GenePath System Electrophoresis

Technical Description:

- The GenePath instrument is based on the pulsed field method of CHEF (Contoured Clamped Homogeneous Electric Field).
- The system has been preprogrammed to analyze a variety of organisms *(E. coli, Pseudomonas, Enterobacter, Enterococcus, Staphylococcusj* and *Candida).*
- The system was also designed to easily accept new programs.
- The GenePath Program Upgrade Kit contains 15 new programs that are based on the separation of a particular size range.
- The Bio-Rad GenePath Reagent Kits are intended for qualitative genetic strain typing based on restriction enzyme digestion of DNA.
- This GenePath Note provides verification and protocol modification information on the application of the PFGE technique to the typing of Enterococcus faecium and Enterococcus faecalis isolates.
- PFGE results shown in this Technote demonstrate that both E. Faecium and E. faecalis isolates can be typed using the GenePath Group 1 kit components and an additional lytic enzyme, mutanolysin.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com
