BIO-RAD

Electrophoresis Power Supplies

PowerPac 300 Power Supply

The PowerPac 300 Power Supply is perfect for submarine and miniature vertical gel electrophoresis. It features four sets of output terminals which deliver constant voltage or constant current with maximum output of 300 volts, 400 milliamps, and 75 watts. Continuous or timed runs are easy to program with the user-friendly interface, and the unit is lightweight and stackable. The vertical display is easily visible from a shelf, and the viewing angle may be adjusted for optimal viewing from the bench.

The PowerPac 300 Power Supply is also available packaged with electrophoresis cells. The mini-vertical electrophoresis systems join the PowerPac 300 with the popular Mini-PROTEAN II cell (see Mini-Vertical Electrophoresis Systems) or the new Ready Gel Cell (see Mini-Vertical Electrophoresis Systems). The submarine electrophoresis systems combine the PowerPac 300 with the Sub-Cell GT DNA electrophoresis cell, Mini-Sub cell GT, or Wide Mini-Sub cell GT cell (see Submerged Gel Nucleic Acid Electrophoresis Systems).
