XMC-220 Virtex 5 FPGA and 16-bit Analog I/O PMC/XMC

The XMC-220™ encompasses the very latest high-resolution A/D and D/A conversion technology which enables analog signal input and output directly to the FPGA for processing. The FPGA processing resources can be used to implement complex algorithms such as FFTs, digital down conversion and filtering in real-time. Since the XMC-220 is offered as a hybrid PMC/XMC, it can be used with the many compute cards that have PMC sites on-board, as well as supporting newer cards which offer XMC capability in addition.

Visit the Nallatech website for more information on XMC-220 Virtex 5 FPGA and 16-bit Analog I/O PMC/XMC
