Socket Module Showcase

BP Socket Modules are designed to provide the highest quality signals and ground—unlike some adapters that are meant just to hold devices. The sophisticated design a through striplines free from the effects of overshoot, noise and ground bounce. Our socket modules also allow for the most reliable vector testing available.

BP socket modules provide a full continuity test that confirms that every pin of the device has a good electrical connection. This allows the system to warn you when a so critical device pin fails to connect properly.

To conduct a continuity test on every pin and functionally test your logic devices you need one pin driver per pin. That also includes testing for bent or static damaged pi more than 84 pin drivers. That's why BP Socket Modules are available up to 240 pins.

If you're looking for a specific socket module, just click on the type of device you are programming.
