CMC unveils VME bus-to-Ethernet link

Communication Machinery Corp. (CMC) recently unveiled an addition to its line of products that provide an interface between VME bus host systems and Ethernet local-area networks.

The Ethernet Node Processor-100 (ENP-100) is CMC's third generation of VME bus ENPs. ENP-100 consists of a board and software that off-load the communications protocol-processing burden from the host computer. The board is based on a Motorola Corp. 12½-MHz MC68020 microprocessor with 512K bytes of random-access memory. That board handles the task of moving data between the VME bus and the network. It also processes network protocols and manages the local bus.

Working in conjunction with CMC's Transmission Control Protocol/Internet Protocol software, the ENP-100 transfers data from its memory to the host's memory at up to 3M bit/sec. The system is also available with a 20-MHz MC68020 microprocessor with 2M bytes of RAM.

The standard configuration is available 60 days after receipt of order and costs $3,595. The optional configuration costs $4,395 and will be ready early next year.

Communication Machinery Corp., 125 Cremona Drive, Santa Barbara, Calif. 93117, or call (805) 968-4262.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
