Imagenation PXC200A

Release Note

The Imagenation PXC200A is a direct replacement for the Imagenation PXC200 frame grabber. This document provides information about ordering the product, integration into previously developed applications, and installing the PXC200A.

Ordering

PXC200L-02 is replaced by PXC200AL.
PXC200F-02 is replaced by PXC200AF.

Integrating PXC200A With Previously Developed Image Processing Software

Win32 Operating Systems

New drivers that support both PXC200 and PXC200A are provided with the PXC200A. The drivers are also available for download at www.imagenation.com. Previous versions of the PXC200 drivers do not support the PXC200A hardware.

DOS

Image-processing applications developed with the PXC200 tools will need to be recompiled.

Note: The PXC200A family of products no longer supports the following operating systems: Windows 3.1, Windows 95 (16 bit), and QNX. The PXC200A is available in PCI short card form factor.

Installation Notes

On Plug & Play Windows operating systems the hardware wizard will detect two devices for each PXC200A. This is normal. The PXC200A software installation disks provide drivers for each of these devices.

Win32 Software Enhancement

Drivers and libraries associated with the PXC200A support 32-bit multithreading applications under Windows 32 bit operating systems.

API Changes

The API function GetModelNumber() has been changed. It will now return:
"PXC200_LC_2" when the PXC200AL is detected;
"PXC200_F_2" when the PXC200AF is detected;
"PXC200_LC" when the PXC200L-02 is detected;
"PXC200_F" when the PXC200F-02 is detected.

Technical support for all Imagenation frame grabbers is available at:
