Unattended Scanning Systems

General Description

Ultra compact dimensions, high performance, versatile connectivity and programmability make the DS2200 the ideal component for OEM and other applications where integration capability and high reliability are essential and cost effectiveness is a key element.

Datalogic's advanced technology and experience in miniaturized laser components has allowed the development of one of the most compact industrial laser scanners on the market without compromising reading performance and industrial quality standards.

The DS2200's high scanning speed and optical quality, together with the new generation real time decoder and flexible decoding software provide high decoding performance and reliability for the most popular bar code symbologies, as well as on damaged or poorly printed bar codes.

Integration into automated equipment is extremely easy thanks to the DS2200's miniature dimensions and its light weight. The dual serial interface increases the device's versatility and connectivity, allowing multi-point scanning configurations through Master-Slave or Multiplexer connections. User friendly set-up procedures are performed through the easy and intuitive WINHOST™ software. The DS2200-2xxx models also provide excellent performance on very high density codes.

DS2200 represents Datalogic's response to the high technological needs of OEMs requiring extremely compact and cost effective components for integration into their automatic equipment. Thanks to Datalogic's recognized high quality standards, system manufacturers can be confident that the scanners installed in their machines will improve overall system performance and reliability.
