Data Switch Manual BNC

Categories:
> Manual Switches

Effortlessly switch between multiple fully shielded BNC connectors using this Break-Before-Make manual data selector.

These manual data switches feature a Break-Before-Make rotary knob selector, and female BNC connectors in a 1:2 or 1:4 configuration.

Break-Before-Make (BBM) prevents short-circuits during the switching process by fully disconnecting each connector before making a new connection. These switches are direction-independent and can function in one-in-many-out or many-in-one-out configurations. All BNC connectors are shielded and grounded.

Features:

- Toggle between multiple BNC connections
