ANGLE CHECKER -- D-266

The **Model D-266 Angle Checker** is designed to check a specific angle of a test part and determine if the angle being checked is within an acceptable tolerance.

Features:

- Fast accurate method for checking specific angles of test parts
- Easily used by assembly line and non-technical personnel

The optional Model D-657 Tooling Autocollimator when used in conjunction with the **Model D-266** can be positioned to check any angle throughout the angle checker's 120° scale and locked in position by means of a hand locking knob. The table of the angle checker has two adjustments providing table tilt in two planes for aligning a gage block or master reference part to the autocollimator.

The 120° scale provided for checking angles is graduated in one degree increments with every 5 degree an extended line and every 10 degree line numbered. From left to right the scale reads 30°, 20°, 10°, to 0°. With the Autocollimator bracket positioned at 0° on the scale, the Autocollimator line of sight is perpendicular (90°) to the work table surface. From the 0° position the scale continues to 90° where the Autocollimator line of sight is parallel to the work table surface.

As in all **Davidson Optronics, Inc.** instruments simplicity is designed into the **Model D-266**. Assembly line and non-technical personnel can master its use in seconds!

Detailed Specifications:

Table Adjustment Ranges	**Azimuth**	±3°
	Elevation	±4°
Adjustment Range		120°
Overall Dimensions	**Height**	13½"
	Width	11¾"
	Depth	9"
Finish	**Table**	Black Hard Anodized
	Other Parts	Ivory Enamel
Angle Checker Weight		17 pounds
Shipping Weight		22 pounds
