VMC 186/40

Four Axis Motion Control Module For VME Bus Applications

The VMC 186/40 motion control module is an intelligent linear motion control sub-system for use with VME bus applications. The module provides a highly integrated solution to control the position of four servo axes. The VMC 186/40 senses position using magnetostrictive linear displacement transducers (Temposonics™) and controls the associated output based on programmable parameters. Analog drive outputs can be configured to work with hydraulic valves and servo drives.

Features

- Four axes of independent or coordinated control
- Optically isolated inputs and outputs
- Direct connection to Magnetostrictive (Temposonics™) sensing devices
- Drive outputs - ±100 mA or ±10 volts
- Motion profiles can be changed on the fly using dual port RAM
- Full PID loop control
- One millisecond control loop
- Front panel status indicators
- Optional RS-232 diagnostic port for tuning parameters and graphic display of motion

Applications

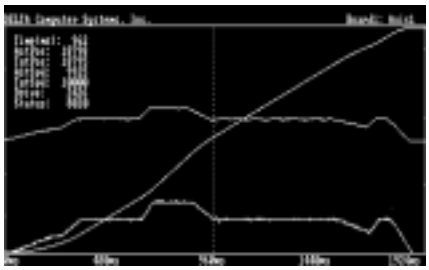

- Headrigs, carriages, and other forest industry machinery
- Hydraulic actuators
- Scanning
- Palletizers/Stackers
- Laser positioning
- Robotics
- Tube forging machines
- Pinch roller positioning

Magnetostrictive Inputs

- Positive or negative interrogation pulses
- Maximum speeds up to 120 inches per second (0.002" resolution)
- Maximum sampling rate of 4kHz
- Transducer lengths up to 130 inches (0.002" resolution)

Diagnostic Program - DCSMON (Requires SBX-351VM option and external PC)
