DESCRIPTION

For cost-sensitive applications where you still want state of the art performance, choose our Diamond-MM-AT 12-bit board. This board has almost all the same features of the Diamond-MM-16-AT board at a 12-bit price. Identical connector pinout and software interface let you upgrade to 16-bit performance later.

Diamond-MM-AT has 16 single-ended / 8 differential analog inputs with 12-bit A/D resolution. A 512-sample FIFO with a 256-sample interrupt threshold enables reliable A/D sampling up to 100KHz in both single-channel and multi-channel scan modes. Nine unipolar and bipolar input ranges let you work with a wide range of input signals.

The board also has 2 analog outputs with 12-bit D/A resolution. They can be set to 0-5V, $\pm 5V$, or programmable range in 1mV steps.

The advanced autocalibration circuitry on Diamond-MM-AT calibrates both the analog inputs and outputs under software control. Calibration takes just seconds and can be performed as often as desired using our Universal Driver software shipped with the board.

Diamond-MM-AT also has 8 digital inputs and 8 digital outputs on board. An 82C54 chip on board is provided for
