It's like getting the features of two lock-in amplifiers in one.

The programmable Dynatrac® 397EO Lock-In Amplifier.

Now, in one lock-in amplifier, you get all the features you need for low-level signal measurement. Features otherwise found only in a combination of two or more lock-ins. Operation is straightforward. No complex front-panel or back-panel controls. And no plug-ins are required to improve performance.

The 397EO is programmable. Which means you can program sensitivity and output expansion. It means you get overload status and reference unlock status indication. And, it means you get computer control of your lock-in and your experiment.

The 397EO provides many other features as well, including:

- Both digital (BCD) and analog outputs.
- Continuous gain control — for precise output scaling.
- Both digital and analog meters.
- Continuous output suppression — while retaining calibration.
- Ratio, log and log-ratio measurements.
- Built-in voltage and current preamps.
- True vector operation — independent of signal waveform and phase.
- True signal tracking operation.

The choice is easy. . . . .our 397EO provides you with a combination of user benefits that cover a wide spectrum of applications . . . . benefits not available with competitive lock-ins.

For more information, a demonstration, or a discussion of your application, call toll-free 1-800-847-2080 or 607-272-7640 or use the reader service number. Ithaco, Inc., 735 W. Clinton St., Ithaca, NY 14850.
