Data Sheet - PDF

Shark™

Shark™ flat-panel displays are designed to ward off the effects of harsh physical treatment, and the environmental hazards routinely encountered in industrial, military, and transportation related applications. Rated NEMA 4/IP 66 for water, dust and dirt intrusion, they are tested to all relevant aspects of MIL-STD-810F for shock and vibration.

900 nits Equivalent – Daylight Readability

All 18-inch Shark models use the latest in high contrast flat-panel technology. With a contrast ratio of 400:1, our 270 nit displays have been used in the same environments that formerly required 900+ nit, super high-bright, daylight readable displays.

Beyond State-of-the-Art

Shark's packaging technology is truly a leap forward in the state-of-the-art for industrial stand-alone displays. In contrast to the usual sheet-metal enclosures and heavy machined bezels found on other designs, it delivers ruggedness and reliability with a consistency never before achievable. Significant investments in design and tooling for the high-strength aluminum frame and the unique mounting clips have eliminated all
grinding, welding and machining. The simplicity of manufacture ensures repeatability in a way never before possible. In addition, modern extrusion technology produces higher strength and less weight in the hollow aluminum frame while providing very tight tolerances for capturing the Dolch proprietary IsoKlip™ fastening technology.

Worldwide Service and Support

Throughout the past two decades, Dolch has built a global network of services and technical support to address the unique needs of our customers. Our infrastructure supports major enterprise companies, mobile work forces, and strategic divisions of government entities in most time zones throughout the world. Strategically located in Silicon Valley, California, Dolch has offices in San Diego, Cleveland, Canada, France, Germany and the United Kingdom, and distributors throughout the rest of the world. If you need quick answers to troubleshooting questions, our
help desk is manned by professionals with many decades of experience. Today's leading technology companies purchase Dolch products for ruggedness and reliability, superior after-sale support, lower total cost of ownership and peace of mind.

Environmental Engineering

Rugged monitors used as operator interfaces are called upon to take abuse well beyond that of ordinary monitors. In order to ensure conformance to the best of established industry standards, these rugged portables must be designed and fully tested in a first class environmental facility. At the company's headquarters in Fremont, California, Dolch is constantly testing the durability of its products to meet the standards of IEC 68-1, MIL-STD-810F, NEMA, and ISTA Project 2A. These standards and others are applied to the special needs of our customers.

SPECIFICATIONS	
Screen Resolution	15-inch – (XGA) 1024x768 18-inch – (SXGA) 1280x1024
Screen Characteristics	Display Colors – (256K – 15-inch, 16.7 Million – 18-inch) Viewing Angle – 120° Min.
Options	Touch Screen, Resistive Rack-mount or Panel-mount 15-inch
