RapidPro

- Scalable, modular and configurable system architecture
- Compact and robust enclosure
- For in-vehicle, laboratory and test bench use
- Comprehensive software support
- Application-specific configurations for common application areas such as engine or chassis control

The RapidPro hardware works as an extension to dSPACE prototyping systems (MicroAutoBox/modular DS1005-based system). With their compact and robust mechanical design, the units are ideally suited for in-vehicle use, and can also be used on test benches and in laboratories. The enclosure is designed so that you can use the units separately or connect several of them to build a stack for use as one physical unit.
Off-the-shelf hardware- and software-configurable signal conditioning (SC) and power stage (PS) modules can be installed in the RapidPro units to set up individual systems that optimally fit the needs of a particular application. Customer-specific modules are available on request. The modular concept, using modules that are hardware- and software-configurable, means that all components can be reused, reconfigured, or extended, for example in later projects or if requirements change, with a minimum of effort. In either case, the RapidPro hardware fits perfectly into your dSPACE tool chain.

Several RapidPro units can be connected for use as one physical unit. RapidPro modules can be easily installed in and removed from the units.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
