

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

VXIbus Development Module

An ideal platform to create a custom module

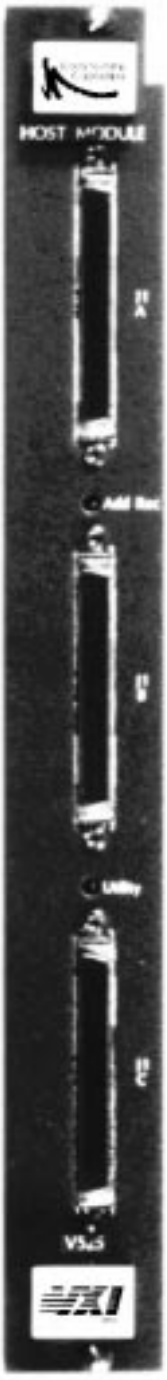

V525

Features

- **Single-width VXI module**
- **VXI register-based interface**
- **Strap-selectable power and ground arrays**
- **Provisions for up to 3 plug-in development cards**
- **Front panel hardware, connectors, and shields are included**

Typical Applications

- **Product development and prototyping**
- **Custom products**

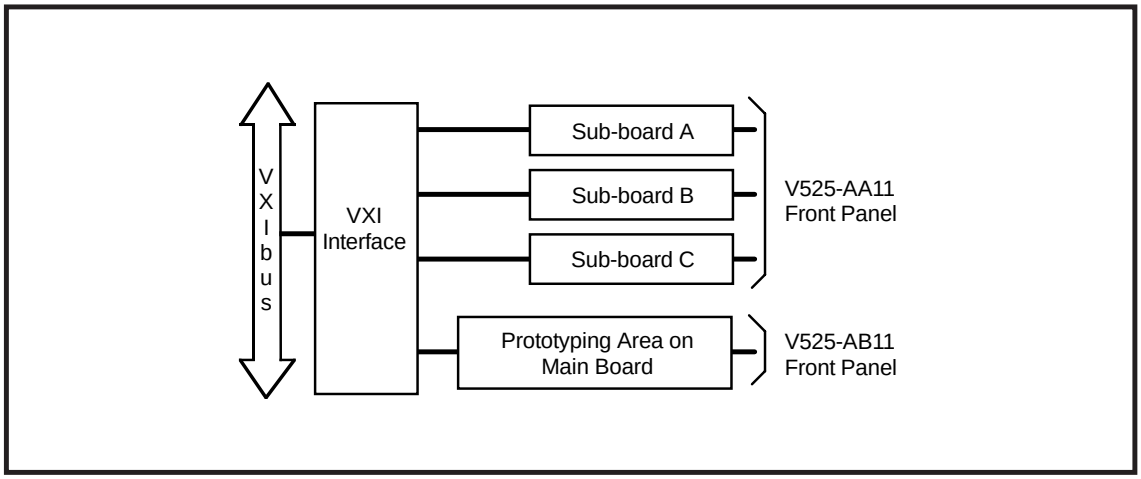

General Description

The V525 is a single-width, C-size, VXIbus module that provides a prototyping and development platform consisting of a standard, VXI, register-based interface and an array of holes for circuit breadboarding. Power and ground are strap-selectable to points within the array of holes that allow for IC packages with 0.3" and 0.6" pin spacing as well as spacing for PGA sockets up to 17 pins per side. In addition, six 50-position, interboard connectors are provided on the host module which carry VXIbus address, data, control, power, and ground signals. These connectors allow the user to develop circuitry on up to three plug-in submodule cards for reconfigurable or higher density applications.

The register-based VXI interface on the V525 provides the configuration registers required by the VXIbus specification so that the appropriate levels of system configuration can be accomplished. Access to the configuration registers is available through the VMEbus Short Address (A16) Space. The V525 supports both static and dynamic configuration. Additionally, circuitry is provided to interface to user-supplied operational registers positioned in VMEbus Standard Address (A24) Space.

The V525-AA11 option includes a front-panel that accepts three submodules with 68P High Density connectors. Sufficient interface and physical information is available to allow you to develop custom submodules. The V525-AB11 option includes a front panel and two 68P High Density board mounted connectors on the host module. LED indicators for address recognition and utility purposes as well as left and right-side ground shields are provided on both options

V525 Interface Paths

Item	Specification
Interface Power Requirements	
+5 V	1 A
Power Available to Breadboard/Submodules	*Note: Total available mainframe power must also be checked.*
+5 V	6 A max.
-5.2 V	5 A max.
-2 V	2 A max.
+12 V	1 A max.
-12 V	1 A max.
+24 V	1 A max
-24 V	1 A max
+15 V	TBD mA max.
-15 V	TBD mA max.
Environmental and Mechanical	
Temperature range	
Operational	0°C to 50°C
Storage	-25°C to +75°C
Relative Humidity	0 to 85%, non-condensing to 40°C
Cooling Requirements	10 CFM
Dimensions	340 mm x 233.35 mm x 30.48 mm (V-size VXIbus)
Front-panel potential	Chassis Ground

Ordering Information

Model V525-AA11 VXIbus Development Module with submodule connector front-panel option
Model V525-AB11 VXIbus Development Module with host module connector front-panel option

Note: Each V525-AA11 includes connectors for 3 custom submodules. The submodules are not included. However, sufficient interface and physical information is available to allow you to develop custom submodules.
