Environment One's Dual Hydrogen Control Panel (DHCP) was designed specifically for monitoring GE's scavenging seal oil generators. The DHCP contains two independent analyzers that monitor the turbine-end seal drain enlargement and collector-end seal drain enlargement. Additionally, it has valving for manual or DCS operation for checking casing purity of the generator.

The DHCP has the ability to automatically increase the amount of hydrogen gas scavenged from the generator, thus maintaining hydrogen purity at an optimum level.

The DHCP works with GE's Mark IV, Mark V and Mark VI control systems.

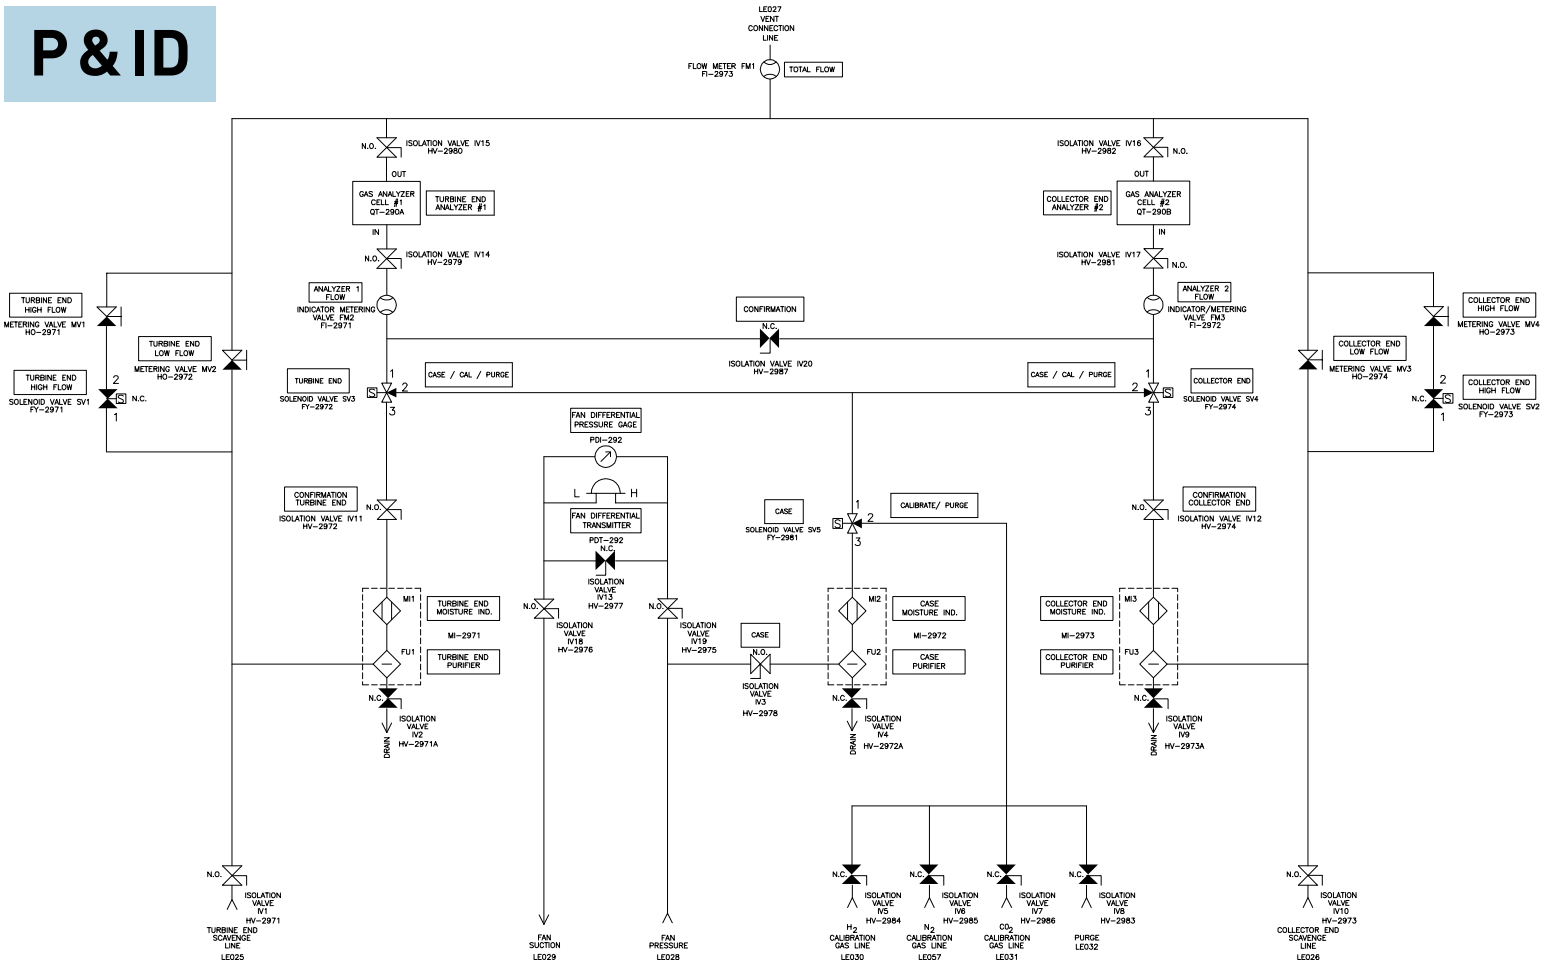

FEATURES AND BENEFITS

- Drop-in replacement of GE's hydrogen control cabinet
- Designed for hazardous location operation
- Digital displays/warnings/alarms
