HC0137G07 Analyzer Cell ASM, can be referred to a Sensor Cell

It is a component of our DHCP Unit

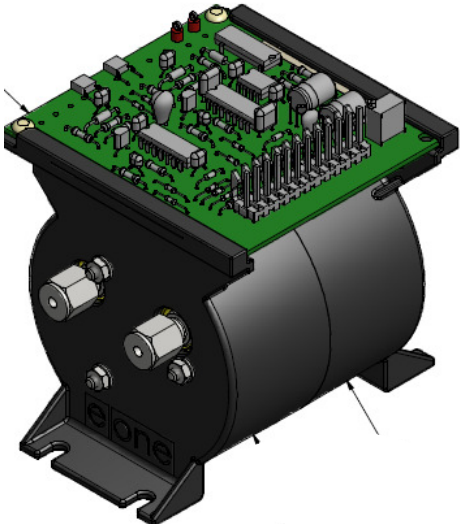

The Analyzer cell (sensor cell) is contained in a cylindrical black carbon composite housing equipped with a sensor board and is comprised of a sampling thermistor and a reference thermistor- both operated at vary low power in as self heated mode- embedded in a temperature regulated cell block

Gas purity is derived as a function of the thermal conductivity of the gas mixture to the heat output of the thermistor under known constraints

It analyzes the H2 Gas Purity going through the DHCP Unit from the Generator

This is a gas density sensor made of a carbon fiber housing, aluminum, stainless steel, and electronic parts. It is part of the purity monitor system. It consumes 20 Watts at 120 Volts.

It does not consist of any "loose chemicals" and is ROHS compliant

Length=4.5” (11.43cm) Width=3.5” (8.89cm) Height-3.5” (8.89cm)
Weight=1.12 pounds (0.51 kg)
