FLS-5834A

NETWORK TESTING—OPTICAL

- High-power super LED (SLED)
- Modulated for chromatic dispersion measurement
- Polarized for PMD measurement
- Broadband spectral range

EXFO's FLS-5834A CD/PMD Analyzer Source is a modulated, polarized, high-power SLED. Thanks to its high power density, you can use it as a broadband source for DWDM channel and component testing.

High Modulation

The FLS-5834A's high modulation makes it a perfect complement to the FTB-5800 Chromatic Dispersion Analyzer, whose technology is based on the phase-shift method. This first-class duo lets you run chromatic dispersion (CD) measurements through amplifiers such as EDFAs, providing the highest accuracy in field CD testing.

High Degree of Polarization

When you need a broadband, highly polarized source for measuring PMD, turn to the FLS-5834A. Test PMD through EDFAs by combining the FLS-5834A with the patent-design breakthrough technology of the FTB-5500B PMD Analyzer.
