ADDENDUM

This Information Applies To The *PM-1600 High-Speed Power Meter* Instruction Manual

On page 95, the TRACe:DATA command should read as follows:

TRACe:DATA?

Description This query indicates the data segment to be returned. Each segment contains between 1 and 128 data. If the segment requested by the user is not valid, no data is included in the segment and the "Segment not allowed" error message will be raised.

Syntax TRAC:DATA? #

Parameters The "#" parameter is the data segment to be returned in the "999" format.

Example For an acquisition of 257 data, the user can expect to receive three segments (two segments with 128 data each and one segment with 1 data). To retrieve the data, the user will send the following commands:

TRAC:DATA? 0

TRAC:DATA? 1

TRAC:DATA? 2

Sending TRAC:DATA? 3 then will raise the "Segment not allowed" error message.
